Books of enduring scholarly value

Classics

From the Renaissance to the nineteenth century, Latin and Greek were compulsory subjects in almost all European universities, and most early modern scholars published their research and conducted international correspondence in Latin. Latin had continued in use in Western Europe long after the fall of the Roman empire as the lingua franca of the educated classes and of law, diplomacy, religion and university teaching. The flight of Greek scholars to the West after the fall of Constantinople in 1453 gave impetus to the study of ancient Greek literature and the Greek New Testament. Eventually, just as nineteenth-century reforms of university curricula were beginning to erode this ascendancy, developments in textual criticism and linguistic analysis, and new ways of studying ancient societies, especially archaeology, led to renewed enthusiasm for the Classics. This collection offers works of criticism, interpretation and synthesis by the outstanding scholars of the nineteenth century.

A History of Greece

Widely acknowledged as the most authoritative Victorian study of ancient Greece, George Grote's twelve-volume work, begun in 1846, established the view of Greek history which still prevails in textbooks and popular accounts of the ancient world today. Grote employs direct and clear language to take the reader from the earliest times of legendary Greece to the death of Alexander and his generation, drawing upon epic poetry and legend, and examining the growth and decline of the Athenian democracy. The work explains Greek political constitutions and philosophy, and interwoven throughout are the important but outlying adventures of the Sicilian and Italian Greeks. Volume 1 focuses on the legendary Greece, the times of epic poetry and legend, and explains how what we read today as myth was once, as Grote describes it, 'accredited history which the first Greeks could conceive or relish of their past time'.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection will bring back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.

THE first idea of this History was conceived many years ago, at a time when ancient Hellas was known to the English public chiefly through the pages of Mitford; and my purpose in writing it was to rectify the erroneous statements as to matter of fact which that history contained, as well as to present the general phænomena of the Grecian world under what I thought a juster and more comprehensive point of view. My leisure however was not at that time equal to the execution of any large literary undertaking; nor is it until within the last three or four years that I have been able to devote to the work that continuous and exclusive labour, without which, though much may be done to illustrate detached points, no entire or complicated subject can ever be set forth in a manner worthy to meet the public eye.

Meanwhile the state of the English literary world, in reference to ancient Hellas, has been materially

changed in more ways than one. If my early friend Dr. Thirlwall's History of Greece had appeared a few years earlier, I should probably never have conceived the design of the present work at all ; I should certainly not have been prompted to the task by any deficiencies, such as those which I felt and regretted in Mitford. The comparison of the two authors affords indeed a striking proof of the progress of sound and enlarged views respecting the ancient world during the present generation. Having studied of course the same evidences as Dr. Thirlwall, I am better enabled than others to bear testimony to the learning, the sagacity and the candour which pervade his excellent work : and it is the more incumbent on me to give expression to this sentiment, since the particular points on which I shall have occasion to advert to it will unavoidably be points of dissent oftener than of coincidence.

The liberal spirit of criticism, in which Dr. Thirlwall stands so much distinguished from Mitford, is his own : there are other features of superiority which belong to him conjointly with his age. For during the generation since Mitford's work, philological studies have been prosecuted in Germany with remarkable success : the stock of facts and documents, comparatively scanty, handed down from the ancient world, has been combined and illustrated in a thousand different ways : and if our

witnesses cannot be multiplied, we at least have numerous interpreters to catch, repeat, amplify and explain their broken and half-inaudible depositions. Some of the best writers in this department—Boeckh, Niebuhr, O. Müller—have been translated into our language; so that the English public has been enabled to form some idea of the new lights thrown upon many subjects of antiquity by the inestimable aid of German erudition. The poets, historians, orators and philosophers of Greece, have thus been all rendered both more intelligible and more instructive than they were to a student in the last century; and the general picture of the Grecian world may now be conceived with a degree of fidelity, which, considering our imperfect materials, it is curious to contemplate.

It is that general picture which an historian of Greece is required first to embody in his own mind, and next to lay out before his readers;—a picture not merely such as to delight the imagination by brilliancy of colouring and depth of sentiment, but also suggestive and improving to the reason. Not omitting the points of resemblance as well as of contrast with the better-known forms of modern society, he will especially study to exhibit the spontaneous movement of Grecian intellect, sometimes aided but never borrowed from without, and lighting up a small portion of a world otherwise clouded and stationary. He will develop the action of

that social system, which, while ensuring to the mass of freemen a degree of protection elsewhere unknown, acted as a stimulus to the creative impulses of genius, and left the superior minds sufficiently unshackled to soar above religious and political routine, to overshoot their own age, and to become the teachers of posterity.

To set forth the history of a people by whom the first spark was set to the dormant intellectual capacities of our nature—Hellenic phenomena as illustrative of the Hellenic mind and character—is the task which I propose to myself in the present work ; not without a painful consciousness how much the deed falls short of the will, and a yet more painful conviction, that full success is rendered impossible by an obstacle which no human ability can now remedy—the insufficiency of original evidence. For in spite of the valuable expositions of so many able commentators, our stock of information respecting the ancient world still remains lamentably inadequate to the demands of an enlightened curiosity. We possess only what has drifted ashore from the wreck of a stranded vessel ; and though this includes some of the most precious articles amongst its once-abundant cargo, yet if any man will cast his eyes over the citations in *Dionysius Laërtius*, *Athenæus* or *Plutarch*, or the list of names in *Vossius de Historicis Græcis*, he will see with grief and surprise how much larger is the

proportion which, through the enslavement of the Greeks themselves, the decline of the Roman Empire, the change of religion, and the irruption of barbarian conquerors, has been irrecoverably submerged. We are thus reduced to judge of the whole Hellenic world, eminently multiform as it was, from a few compositions; excellent indeed in themselves, but bearing too exclusively the stamp of Athens. Of Thucydides and Aristotle indeed, both as inquirers into matter of fact and as free from narrow local feeling, it is impossible to speak too highly; but unfortunately that work of the latter which would have given us the most copious information regarding Grecian political life—his collection and comparison of 150 distinct town-constitutions—has not been preserved: and the brevity of Thucydides often gives us but a single word where a sentence would not have been too much, and sentences which we should be glad to see expanded into paragraphs.

Such insufficiency of original and trustworthy materials, as compared with those resources which are thought not too much for the historian of any modern kingdom, is neither to be concealed nor extenuated, however much we may lament it. I advert to the point here on more grounds than one. For it not only limits the amount of information which an historian of Greece can give to his readers—compelling him to leave much of his pic-

## PREFACE.

ture an absolute blank,—but it also greatly spoils the execution of the remainder. The question of credibility is perpetually obtruding itself, and requiring a decision, which, whether favourable or unfavourable, always introduces more or less of controversy; and gives to those outlines, which the interest of the picture requires to be straight and vigorous, a faint and faltering character. Expressions of qualified and hesitating affirmation are repeated until the reader is sickened; while the writer himself, to whom this restraint is more painful still, is frequently tempted to break loose from the unseen spell by which a conscientious criticism binds him down—to screw up the possible and probable into certainty, to suppress counterbalancing considerations, and to substitute a pleasing romance in place of half-known and perplexing realities. Desiring in the present work to set forth all which can be ascertained, together with such conjectures and inferences as can be reasonably deduced from it, but nothing more—I notice at the outset that faulty state of the original evidence which renders discussions of credibility, and hesitation in the language of the judge, unavoidable. Such discussions, though the reader may be assured that they will become less frequent as we advance into times better known, are tiresome enough even with the comparatively late period which I adopt as the historical beginning; much more intolerable would

they have proved had I thought it my duty to start from the primitive terminus of Deukalion or Inachus, or from the unburied Pelasgi and Leleges, and to subject the heroic ages to a similar scrutiny. I really know nothing so disheartening or unrequited as the elaborate balancing of what is called evidence—the comparison of infinitesimal probabilities and conjectures all uncertified—in regard to these shadowy times and persons.

The law respecting sufficiency of evidence ought to be the same for ancient times as for modern, and the reader will find in this history an application to the former of criteria analogous to those which have been long recognised in the latter. Approaching, though with a certain measure of indulgence, to this standard, I begin the real history of Greece with the first recorded Olympiad, or 776 B.C. To such as are accustomed to the habits once universal, and still not uncommon, in investigating the ancient world, I may appear to be striking off one thousand years from the scroll of history; but to those whose canon of evidence is derived from Mr. Hallam, M. Sismondi, or any other eminent historian of modern events, I am well-assured that I shall appear lax and credulous rather than exigent or sceptical. For the truth is, that historical records, properly so called, do not begin until long after this date: nor will any man, who candidly considers the extreme paucity of attested facts for

two centuries after 776 B.C., be astonished to learn that the state of Greece in 900, 1000, 1100, 1200, 1300, 1400 B.C., &c.—or any earlier century which it may please chronologists to include in their computed genealogies—cannot be described to him upon anything like decent evidence. I shall hope, when I come to the lives of Socrates and Plato, to illustrate one of the most valuable of their principles—that conscious and confessed ignorance is a better state of mind, than the fancy, without the reality, of knowledge. Meanwhile I begin by making that confession, in reference to the real world of Greece anterior to the Olympiads; meaning the disclaimer to apply to anything like a general history,—not to exclude rigorously every individual event.

The times which I thus set apart from the region of history are discernible only through a different atmosphere—that of epic poetry and legend. To confound together these disparate matters is, in my judgment, essentially unphilosophical. I describe the earlier times by themselves, as conceived by the faith and feeling of the first Greeks, and known only through their legends—without presuming to measure how much or how little of historical matter these legends may contain. If the reader blame me for not assisting him to determine this—if he ask me why I do not undraw the curtain and disclose the picture—I reply in the words of the painter Zeuxis, when the same question was

addressed to him on exhibiting his master-piece of imitative art—"The curtain is the picture." What we now read as poetry and legend was once accredited history, and the only genuine history which the first Greeks could conceive or relish of their past time: the curtain conceals nothing behind, and cannot by any ingenuity be withdrawn. I undertake only to show it as it stands—not to efface, still less to re-paint it.

Three-fourths of the two volumes now presented to the public are destined to elucidate this age of historical faith, as distinguished from the later age of historical reason: to exhibit its basis in the human mind—an omnipresent religious and personal interpretation of nature; to illustrate it by comparison with the like mental habit in early modern Europe; to show its immense abundance and variety of narrative matter, with little care for consistency between one story and another; lastly, to set forth the causes which overgrew and partially supplanted the old epical sentiment, and introduced, in the room of literal faith, a variety of compromises and interpretations.

The legendary age of the Greeks receives its principal charm and dignity from the Homeric poems: to these, therefore, and to the other poems included in the ancient epic, an entire chapter is devoted, the length of which must be justified by the names of the Iliad and Odyssey. I have thought

it my duty to take some notice of the Wolfian controversy as it now stands in Germany, and have even hazarded some speculations respecting the structure of the Iliad. The society and manners of the heroic age, considered as known in a general way from Homer's descriptions and allusions, are also described and criticised.

I next pass to the historical age, beginning at 776 B.C.; prefixing some remarks upon the geographical features of Greece. I try to make out, amidst obscure and scanty indications, what the state of Greece was at this period; and I indulge some cautious conjectures, founded upon the earliest verifiable facts, respecting the steps immediately antecedent by which that condition was brought about. In the present volumes I have only been able to include the history of Sparta and the Peloponnesian Dorians, down to the age of Peisistratus and Cræsus. I had hoped to have comprised in them the entire history of Greece down to this last-mentioned period, but I find the space insufficient.

The history of Greece falls most naturally into six compartments, of which the first may be looked at as a period of preparation for the five following, which exhaust the free life of collective Hellas.

I. Period from 776 B.C. to 560 B.C., the accession of Peisistratus at Athens and of Cræsus in Lydia.

II. From the accession of Peisistratus and Cræsus to the repulse of Xerxes from Greece.

III. From the repulse of Xerxes to the close of the Peloponnesian war and overthrow of Athens.

IV. From the close of the Peloponnesian war to the battle of Leuktra.

V. From the battle of Leuktra to that of Chæroneia.

VI. From the battle of Chæroneia to the end of the generation of Alexander.

The five periods from Peisistratus down to the death of Alexander and of his generation, present the acts of an historical drama capable of being recounted in perspicuous succession, and connected by a sensible thread of unity. I shall adopt them as my order of distribution, interweaving in their proper places the important but outlying adventures of the Sicilian and Italian Greeks, and introducing also such explanations of Grecian political constitutions, philosophy, poetry and oratory, as are requisite to exhibit the many-sided activity of this people during their short but brilliant career.

After the generation of Alexander, the political action of Greece becomes cramped and degraded—no longer interesting to the reader, or operative on the destinies of the future world. We may indeed name one or two incidents, especially the revolutions of Agis and Kleomenês at Sparta, which are both instructive and affecting; but as a whole, the

period, between 300 B.C. and the absorption of Greece by the Romans, is of no interest in itself, and is only so far of value as it helps us to understand the preceding centuries. The dignity and value of the Greeks from that time forward belong to them only as individual philosophers, preceptors, astronomers and mathematicians, literary men and critics, medical practitioners, &c. In all these respective capacities, especially in the great schools of philosophical speculation, they still constitute the light of the Roman world; though, as communities, they have lost their own orbit, and have become satellites of more powerful neighbours.

I propose to bring down the history of the Grecian communities to the year 300 B.C., or the close of the generation which takes its name from Alexander the Great, and I hope to accomplish this in eight volumes altogether. For the next two or three volumes I have already large preparations made, and I shall publish my third (perhaps my fourth) in the course of the ensuing winter.

There are great disadvantages in the publication of one portion of a history apart from the remainder; for neither the earlier nor the later phænomena can be fully comprehended without the light which each mutually casts upon the other. But the practice has become habitual, and is indeed more than justified by the well-known inadmissibility of “long hopes” into the short span of human life. Yet I can-

not but fear that my first two volumes will suffer in the estimation of many readers by coming out alone—and that men who value the Greeks for their philosophy, their politics, and their oratory, may treat the early legends as not worth attention. And it must be confessed that what may be called the feminine attributes of the Greek mind—their religious and poetical vein—here appear in disproportionate relief, as compared with the masculine capacities—with those powers of acting, organising, judging, and speculating, which will be revealed in the forthcoming volumes. I venture however to forewarn the reader that there will occur numerous circumstances in the after political life of the Greeks which he will not comprehend unless he be initiated into the course of their legendary associations. He will not understand the frantic terror of the Athenian public during the Peloponnesian war, on the occasion of the mutilation of the statues called *Hermæ*, unless he enters into the way in which they connected their stability and security with the domiciliation of the gods in the soil: nor will he adequately appreciate the habit of the Spartan king, on military expeditions,—when he offered his daily public sacrifices on behalf of his army and his country,—“always to perform this morning service immediately before sunrise, in order that he might be beforehand in obtaining the favour of the

The occasion will indeed often occur for remarking how these legends illustrate and vivify the political phænomena of the succeeding times, and I have only now to urge the necessity of considering them as the beginning of a series,—not as an entire work.

**FOLLOWING** the example of Dr. Thirlwall and other excellent scholars, I call the Greek deities by their real Greek names, and not by the Latin equivalents used among the Romans. For the assistance of those readers to whom the Greek names may be less familiar, I here annex a table of the one and the other.

as nearly as I dared to the Greek letters in preference to the Latin; and on this point I venture upon an innovation which I should have little doubt of vindicating before the reason of any candid English student. For the ordinary practice of substituting, in a Greek name, the English C in place of the Greek K is indeed so obviously incorrect, that it admits of no rational justification. Our own K precisely and in every point coincides with the Greek K: we have thus the means of reproducing the Greek name to the eye as well as to the ear, yet we gratuitously take the wrong letter in preference to the right. And the precedent of the Latins is here against us rather than in our favour, for their C really coincided in sound with the Greek K, whereas our C entirely departs from it, and becomes an S, before *e*, *i*, *æ*, *œ*, and *y*. Though our C has so far deviated in sound from the Latin C, yet there is some warrant for our continuing to use it in writing Latin names—because we thus reproduce the name to the eye, though not to the ear. But this is not the case when we employ our C to designate the Greek K, for we depart here not less from the visible than from the audible original; while we mar the unrivalled euphony of the Greek language by that multiplied sibilation which constitutes the least inviting feature in our own. Among German philologists the K is now universally employed in writing Greek names, and I have adopted it pretty largely in this work, making exception for such names as the English reader has been so accustomed to hear with the C, that they may be considered as being almost Anglicised. I have farther marked the long *e* and the long *o* ( $\eta$ ,  $\omega$ ) by a circumflex (Hêê) when it occurs in the last syllable or in the penultimate of a name.
