## CAMBRIDGE LIBRARY COLLECTION

*Books of enduring scholarly value*

### Travel and exploration

The history of travel writing dates back to the Bible, Caesar, the Vikings and the Crusaders, and its many themes include war, trade, science and recreation. Explorers from Columbus to Cook charted lands not previously visited by Western travellers, and were followed by merchants, missionaries, and colonists, who wrote accounts of their experiences. The development of steam power in the nineteenth century provided opportunities for increasing numbers of 'ordinary' people to travel further, more economically, and more safely, and resulted in great enthusiasm for travel writing among the reading public. Works included in this series range from first-hand descriptions of previously unrecorded places, to literary accounts of the strange habits of foreigners, to examples of the burgeoning numbers of guidebooks produced to satisfy the needs of a new kind of traveller - the tourist.

### The History of Maritime and Inland Discovery

William Desborough Cooley (1795–1883) was a geographer and historian, the author of a collection of influential texts on the development of geographical study, and a key founding member of the Hakluyt Society. First published as a complete set in 1831 as part of Dionysius Lardner's *Cabinet Cyclopaedia*, this is the history in three volumes of the development of the geographical sciences through travel and exploration. Each volume is divided chronologically by historical era, tracing the pursuit of geographical discovery by both land and sea from the Roman Empire to the Himalayan expeditions of the early nineteenth century. Featuring a comprehensive index, this expertly compiled reference text will aid any study of the history of travel and exploration. This second volume includes an account of the expeditions of Columbus, along with information on the settlement of North America and the first circumnavigation of the Earth in 1522.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection will bring back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
