The books reissued in this series include accounts of historical events and movements by eye-witnesses and contemporaries, as well as landmark studies that assembled significant source materials or developed new historiographical methods. The series includes work in social, political and military history on a wide range of periods and regions, giving modern scholars ready access to influential publications of the past.

**The Historical Geography of Asia Minor**

The archaeologist and New Testament scholar William Mitchell Ramsay (1851–1939) first published *The Historical Geography of Asia Minor* in 1890, pioneering the study of classical topography. The book, based on his extensive fieldwork, is split into two parts. Part 1 examines the trade routes and road systems – both Roman and Byzantine – of Asia Minor. It discusses Hellenism and Orientalism and assesses the reliability of ancient topographical accounts of the area, including the Peutinger Table, the itineraries and a number of Ptolemy's geographical comments. Part 2 examines the political divisions of Asia Minor into cities and bishoprics. A number of maps and tables are included. Ramsay's authoritative survey opened up the historical study of the geography and topography of Asia Minor in many disciplines. His work has been used widely by archaeologists, classicists, and New Testament scholars. Still not fully superseded, it remains a key text in historical geography.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection will bring back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
