CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

Life Sciences

Until the nineteenth century, the various subjects now known as the life sciences were regarded either as arcane studies which had little impact on ordinary daily life, or as a genteel hobby for the leisured classes. The increasing academic rigour and systematisation brought to the study of botany, zoology and other disciplines, and their adoption in university curricula, are reflected in the books reissued in this series.

Plants of New South Wales

Sir Ferdinand von Müller (1825–96) was a botanist renowned for his research on the native plants of Australia. After emigrating from Germany in 1847, he was appointed Government Botanist of Victoria in 1853 and subsequently Director of the Royal Botanic Garden, Melbourne, which post he held until 1873. He was elected a Fellow of the Royal Society in 1861 and was knighted in 1879 for his services to Australian botany. This volume, first published in 1885, contains Müller's botanical survey of the plants found in the Australian state of New South Wales. Including an introduction by prominent Australian botanist William Woolls (1814–93), the survey divides the flora into scientific orders, with short descriptions of genera and species. Both native and introduced plants are included in the survey. This volume offers valuable insights into the composition of Australian flora at the time of publication.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection will bring back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
