

CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

History

The books reissued in this series include accounts of historical events and movements by eye-witnesses and contemporaries, as well as landmark studies that assembled significant source materials or developed new historiographical methods. The series includes work in social, political and military history on a wide range of periods and regions, giving modern scholars ready access to influential publications of the past.

The Book of the Farm

Henry Stephens (1795–1874) was a farmer and later a writer on agriculture. After attending lectures on chemistry and agriculture at the University of Edinburgh he boarded with a Berwickshire farmer, George Brown, and gained practical experience of agricultural work. In 1820 Stephens acquired his own farm, on which he used modern and experimental farming methods. In 1837 he sold the farm, and devoted the rest of his life to writing guides to farming for the use of inexperienced farmers. These influential volumes, first published in 1842, and reprinted many times (the 1844 edition is reissued here) contain Stephens' detailed descriptions of contemporary farming practices. He describes in meticulous detail all aspects of farming, including livestock care and slaughter, dairying, irrigation practices and crop culture. Arranged by season and including copious high-quality illustrations of farming equipment, these extremely popular and fascinating volumes were considered the standard work on practical Victorian agriculture, and were used as an 'instructional manual' on the recent BBC television series, 'The Victorian Farm'. Volume 2 describes farming tasks performed in spring.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection will bring back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
