CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

History

The books reissued in this series include accounts of historical events and movements by eye-witnesses and contemporaries, as well as landmark studies that assembled significant source materials or developed new historiographical methods. The series includes work in social, political and military history on a wide range of periods and regions, giving modern scholars ready access to influential publications of the past.

The Farmer's Calendar

A prolific writer, farmer, and secretary to the Board of Agriculture, in the closing decades of the eighteenth century Arthur Young (1741–1820) encouraged a generation of farmers to embrace new agricultural technologies. Books deriving from his tours of Britain, examining in detail the agricultural practice of various parts of the country, were immediately successful and remain a valuable historical resource. In 1771 Young produced the first edition of his *Farmer's Calendar*. Another overnight success, his well-informed and accessible timetable of the farming year went through ten editions in the author's own lifetime. Arranged by month, the chapters provide a valuable account of British arable and livestock farming at the height of the Agrarian Revolution. This edition, from 1804, contains additional notes on agricultural improvements developed in the decades since the book's original publication, as well as a substantial appendix containing clear explanations and practical advice that remain of great interest today.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection will bring back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.

ADVERTISEMENT.

GARDENERS have found great use in Calendars of their necessary work for every month in the year; and, if the two employments of the Farmer and the Gardener be well considered, it will appear that the former wants such a remembrancer, at least as much as his brethren in the garden.

At the beginning of every month, a good Farmer, whether he has or has not a book of this sort, is obliged to reflect on the work he has to perform in that month: he ought to foresee the whole at once, or it is impossible he should make a proper provision for its due performance. I leave it to any one to judge, if such an estimate of monthly business can be gained so easily, completely, or systematically, without such an assistance to the memory as is afforded by this Work; and even if a book of this sort but once in a year gives intimation of some important work, which might otherwise have been forgotten, its worth must be acknowledged.

iv

ADVERTISEMENT.

In respect to the Calendars which had appeared previously to this Publication, they were very slight and imperfect sketches, generally nothing but additions to other books; and their authors omitted at least as many useful articles as they inserted.

TO THE NEW EDITION.

In various parts of the Correspondence published during the last fifteen years in the Annals of Agriculture, I have been called upon for a New Edition of this Calendar, and have as often resolved to give it; but the new improvements which have taken place, made so many and such great alterations necessary, that other and more pressing employments have prevented the undertaking. It is at last completed; and I hope the Reader will find it, in the present form, worthy of his attention.

A. Y.

*Bradfield-Hall,
February 3, 1804.*
