

## CONTENTS.

---

### BOOK I.

	Page
OF THE PRINCIPAL CIRCUMSTANCES CONNECTED WITH VEGETABLE LIFE WHICH ILLUSTRATE THE OPERATIONS OF GARDENING       -       -       -	5

#### CHAPTER I.

##### GERMINATION.

The Nature of a Seed. — Its Duration. — Power of Growth. — Causes of Germination. — Temperature. — Light. — Humidity. — Chemical Changes       -       -	7
--	---

#### CHAP. II.

##### GROWTH BY THE ROOT.

Roots lengthen at their Points only. — Absorb at that Part chiefly. — Increase in Diameter like Stems. — Their Origin. — Are feeding Organs. — Without much Power of selecting their Food. — Nature of the latter. — May be poisoned. — Are constantly in Action. — Sometimes poison the Soil in which they grow. — Have no Buds. — But may generate them       -       -	11
---	----

#### CHAP. III.

##### GROWTH BY THE STEM.

Origin of the Stem. — The growing Point. — Production of Wood, Bark, Pith, Medullary Rays. — Properties of Sap-wood, Heart wood, Liber, Rind, &c. — Nature and Office of Leaf-buds. — Embryo-buds. — Bulbs. — Con- veyance of Sap, and its Nature       -       -	22
---	----

## CHAP. IV.

## ACTION OF LEAVES.

Their Nature, Structure, Veins, Epidermis, Stomates. — Effect of Light. — Digestion or Decomposition of Car- bonic Acid. — Insensible Perspiration. — Formation of Secretions. — Fall of the Leaf. — Formation of Buds by Leaves - - - - -	38
--	----

## CHAP. V.

## ACTION OF FLOWERS.

Structure of Flowers. — Names of their Parts. — Ten- dency of the Parts to alter and change into each other, and into Leaves. — Double Flowers. — Analogy of Flowers to Branches. — Cause of the Production of Flowers. — Of Productiveness. — Of Sterility. — Uses of the Parts of a Flower. — Fertilisation. — Hybrids.— Crossbreds - - - - -	55
---	----

## CHAP. VI.

## OF THE MATURATION OF THE FRUIT.

Changes it undergoes. — Superior and inferior Fruit. — Is fed by Branches upon organisable Matter furnished by Leaves. — Physiological Use of the Fruit. — Nature of Secretions. — The Changes they undergo. — Effect of Heat. — Of Sunlight. — Of Water. — Seeds. — Origin of their Food. — Cause of their Longevity. — Of their Destruction. — Difference in their Vigour - - -	70
---	----

## CHAP. VII.

## OF TEMPERATURE.

Limits of Temperature endurable by Plants. — Effects of a too high Temperature. — Of a too low Temperature. — Frost. — Alternations of Temperature. — Day and Night. — Winter and Summer. — Temperature of Earth and Atmosphere - - - - -	81
---	----

CONTENTS. xv

BOOK II.

	Page
OF THE PHYSIOLOGICAL PRINCIPLES UPON WHICH THE OPERATIONS OF HORTICULTURE ESSENTIALLY DEPEND - - - - -	104

CHAP. I.

Of Bottom Heat - " - - -	105
--------------------------	-----

CHAP. II.

Of the Moisture of the Soil. — Watering - - -	117
---	-----

CHAP. III.

Of Atmospherical Moisture and Temperature - - -	128
---	-----

CHAP. IV.

Of Ventilation - - - - -	153
--------------------------	-----

CHAP. V.

Of Seed-sowing - - - - -	163
--------------------------	-----

CHAP. VI.

Of Seed-saving - - - - -	175
--------------------------	-----

CHAP. VII.

Of Seed-packing - - - - -	184
---------------------------	-----

CHAP. VIII.

Of Propagation by Eyes and Knurs - - -	191
--	-----

CHAP. IX.

Of Propagation by Leaves - - - - -	198
------------------------------------	-----

CHAP. X.

Of Propagation by Cuttings - - - - -	204
--------------------------------------	-----

xvi	CONTENTS.					
						Page
	CHAP. XI.					
Of Propagation by Layers and Suckers	-	-	-	-	-	217
	CHAP. XII.					
Of Propagation by Budding and Grafting	-	-	-	-	-	220
	CHAP. XIII.					
Of Pruning	-	-	-	-	-	251
	CHAP. XIV.					
Of Training	-	-	-	-	-	268
	CHAP. XV.					
Of Potting	-	-	-	-	-	280
	CHAP. XVI.					
Of Transplanting	-	-	-	-	-	293
	CHAP. XVII.					
Of the Preservation of Races by Seed	-	-	-	-	-	311
	CHAP. XVIII.					
Of the Improvement of Races	-	-	-	-	-	232
	CHAP. XIX.					
Of Resting	-	-	-	-	-	337
	CHAP. XX.					
Of Soil and Manure	-	-	-	-	-	351
INDEX	-	-	-	-	-	363
