

CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

Life Sciences

Until the nineteenth century, the various subjects now known as the life sciences were regarded either as arcane studies which had little impact on ordinary daily life, or as a genteel hobby for the leisured classes. The increasing academic rigour and systematisation brought to the study of botany, zoology and other disciplines, and their adoption in university curricula, are reflected in the books reissued in this series.

British Fossil Brachiopoda

British palaeontologist Thomas Davidson (1817–85) was born in Edinburgh and began his studies at the city’s university. Encouraged by German palaeontologist Leopold von Buch, he began to study brachiopod fossils at the age of twenty, and he quickly became the undisputed authority. He was elected fellow of the Geological Society of London in 1852, receiving the Wollaston medal in 1865. He became a Fellow of the Royal Society in 1857. Published between 1850 and 1886, this six-volume work became the definitive reference text on the subject. It includes more than two hundred hand-drawn plates and a comprehensive bibliography. This volume, the last of six, is a thorough bibliography of brachiopod research literature up to 1886.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection will bring back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.

THE

PALÆONTOGRAPHICAL SOCIETY.

INSTITUTED MDCCCXLVII.

L O N D O N :
MDCCCLXXXVI.

. The exhaustive Monograph on the British Fossil Brachiopoda, of which the present Volume is the last portion, was the result of investigations extending over thirty years. Its author, Dr. T. DAVIDSON, spared neither trouble nor expense in its production, and placed on the lithographic stone with his own hand the Drawings depicted in two hundred and twenty-nine of the Plates employed for the illustration of the first five Volumes. While the accompanying Bibliography (towards the compilation of which Mr. W. H. Dalton had rendered most valuable assistance) was in the press, an unexpected illness caused the active pen to rest, and brought Dr. T. Davidson's life to a close.

T. W.
