WHAT Archimedes said of the mechanical powers, may be applied, to Reason and Liberty: “*Had we,*” said he, “*a place to stand upon, we might raise the world.*”

The revolution of America presented in politics what was only theory in mechanics. So deeply rooted were all the governments of the old world, and so effectually had the tyranny and the antiquity of habit established itself over the mind, that no beginning could be made in Asia, Africa, or Europe, to reform the political condition of man. Freedom had been hunted round the globe; reason was considered as rebellion; and the slavery of fear had made men afraid to think.

But such is the irresistible nature of truth, that all it asks, and all it wants, is the liberty of appearing. The sun needs no inscription to distinguish him from darkness; and no sooner did the American governments display themselves to the world, than

B despotism

despotism felt a shock, and man began to contemplate redress.

The independence of America, considered merely as a separation from England, would have been a matter but of little importance, had it not been accompanied by a revolution in the principles and practice of governments. She made a stand, not for herself only, but for the world, and looked beyond the advantages herself could receive. Even the Hessian, though hired to fight against her, may live to bless his defeat; and England, condemning the viciousness of its government, rejoice in its miscarriage.

As America was the only spot in the political world, where the principles of universal reformation could begin, so also was it the best in the natural world. An assemblage of circumstances conspired, not only to give birth, but to add gigantic maturity to its principles. The scene which that country presents to the eye of a spectator, has something in it which generates and encourages great ideas. Nature appears to him in magnitude. The mighty objects he beholds, act upon his mind by enlarging it, and he partakes of the greatness he contemplates.—Its first settlers were emigrants from different European nations, and of diversified professions of religion, retiring from the governmental persecutions of the old world, and meeting in the new, not as enemies, but as brothers. The wants which necessarily accompany the cultivation of a wilderness produced among them a state of society, which countries, long harassed by the quarrels and intrigues of governments,

governments, had neglected to cherish. In such a situation man becomes what he ought. He sees his species, not with the inhuman idea of a natural enemy, but as kindred; and the example shews to the artificial world, that man must go back to Nature for information.

From the rapid progress which America makes in every species of improvement, it is rational to conclude, that if the governments of Asia, Africa, and Europe, had begun on a principle similar to that of America, or had not been very early corrupted therefrom, that those countries must by this time have been in a far superior condition to what they are. Age after age has passed away, for no other purpose than to behold their wretchedness.—Could we suppose a spectator who knew nothing of the world, and who was put into it merely to make his observations, he would take a great part of the old world to be new, just struggling with the difficulties and hardships of an infant settlement. He could not suppose that the hordes of miserable poor, with which old countries abound, could be any other than those who had not yet had time to provide for themselves. Little would he think they were the consequence of what in such countries is called government.

If, from the more wretched parts of the old world, we look at those which are in an advanced stage of improvement, we still find the greedy hand of government thrusting itself into every corner and crevice of industry, and grasping the spoil of the multitude. Invention is continually exercised, to furnish new pretences for revenue

and taxation. It watches prosperity as its prey, and permits none to escape without a tribute.

As revolutions have begun, (and as the probability is always greater against a thing beginning, than of proceeding after it has begun), it is natural to expect that other revolutions will follow. The amazing and still increasing expences with which old governments are conducted, the numerous wars they engage in or provoke, the embarrassments they throw in the way of universal civilization and commerce, and the oppression and usurpation they act at home, have wearied out the patience, and exhausted the property of the world. In such a situation, and with the examples already existing, revolutions are to be looked for. They are become subjects of universal conversation, and may be considered as the *Order of the day*.

If systems of government can be introduced, less expensive, and more productive of general happiness, than those which have existed, all attempts to oppose their progress will in the end be fruitless. Reason, like time, will make its own way, and prejudice will fall in a combat with interest. If universal peace, civilization, and commerce, are ever to be the happy lot of man, it cannot be accomplished but by a revolution in the system of governments. All the monarchical governments are military. War is their trade, plunder and revenue their objects. While such governments continue, peace has not the absolute security of a day. What is the history of all monarchical governments, but a disgusting picture of human wretchedness, and the accidental respite
of

INTROD. RIGHTS OF MAN. 5

of a few years repose? Wearied with war, and tired with human butchery, they sat down to rest and called it peace. This certainly is not the condition that Heaven intended for man; and if *this be monarchy*, well might monarchy be reckoned among the sins of the Jews.

The revolutions which formerly took place in the world, had nothing in them that interested the bulk of mankind. They extended only to a change of persons and measures but not of principles, and rose or fell among the common transactions of the moment. What we now behold, may not improperly be called a “*counter revolution*.” Conquest and tyranny, at some early period, dispossessed man of his rights, and he is now recovering them. And as the tide of all human affairs has its ebb and flow in directions contrary to each other, so also is it in this. Government founded on a *moral theory*, on a *system of universal peace*, on the *indefeasible hereditary Rights of Man*, is now revolving from west to east, by a stronger impulse than the government of the sword revolved from east to west. It interests not particular individuals, but nations, in its progress, and promises a new æra to the human race.

The danger to which the success of revolutions is most exposed, is that of attempting them before the principles on which they proceed, and the advantages to result from them, are sufficiently seen and understood. Almost every thing appertaining to the circumstances of a nation, has been absorbed and confounded under the general and

RIGHTS OF MAN.

PART II.

myfterious word *government*. Though it avoids taking to its account the errors it commits, and the mifchiefs it occasions, it fails not to arrogate to itfelf whatever has the appearance of profperity. It robs induftry of its honours, by pedantically making itfelf the caufe of its effects; and purloins from the general character of man, the merits that appertain to him as a focial being.

It may therefore be of ufe, in this day of revolutions, to difcriminate between thofe things which are the effect of government, and thofe which are not. This will beft be done by taking a review of fociety and civilization, and the confequences resulting therefrom, as things diftinct from what are called governments. By beginning with this investigation, we fhall be able to affign effects to their proper caufe, and analyze the mafs of common errors.

C H A P. I.

OF SOCIETY AND CIVILIZATION.

GREAT part of that order which reigns among mankind is not the effect of government. It has its origin in the principles of society and the natural constitution of man. It existed prior to government, and would exist if the formality of government was abolished. The mutual dependance and reciprocal interest which man has upon man, and all the parts of a civilized community upon each other, create that great chain of connection which holds it together. The landholder, the farmer, the manufacturer, the merchant, the tradesman, and every occupation, prospers by the aid which each receives from the other, and from the whole. Common interest regulates their concerns, and forms their law; and the laws which common usage ordains, have a greater influence than the laws of government. In fine, society performs for itself almost every thing which is ascribed to government.

To understand the nature and quantity of government proper for man, it is necessary to attend to his character. As Nature created him

for social life, she fitted him for the station she intended. In all cases she made his natural wants greater than his individual powers. No one man is capable, without the aid of society, of supplying his own wants; and those wants, acting upon every individual, impel the whole of them into society, as naturally as gravitation acts to a center.

But she has gone further. She has not only forced man into society, by a diversity of wants, which the reciprocal aid of each other can supply, but she has implanted in him a system of social affections, which, though not necessary to his existence, are essential to his happiness. There is no period in life when this love for society ceases to act. It begins and ends with our being.

If we examine, with attention, into the composition and constitution of man, the diversity of his wants, and the diversity of talents in different men for reciprocally accommodating the wants of each other, his propensity to society, and consequently to preserve the advantages resulting from it, we shall easily discover, that a great part of what is called government is mere imposition.

Government is no farther necessary than to supply the few cases to which society and civilization are not conveniently competent; and instances are not wanting to shew, that every thing which government can usefully add thereto, has been performed by the common consent of society, without government.

For upwards of two years from the commencement of the American war, and to a longer period
in

in several of the American States, there were no established forms of government. The old governments had been abolished, and the country was too much occupied in defence, to employ its attention in establishing new governments; yet during this interval, order and harmony were preserved as inviolate as in any country in Europe. There is a natural aptness in man, and more so in society, because it embraces a greater variety of abilities and resource, to accommodate itself to whatever situation it is in. The instant formal government is abolished, society begins to act. A general association takes place, and common interest produces common security.

So far is it from being true, as has been pretended, that the abolition of any formal government is the dissolution of society, that it acts by a contrary impulse, and brings the latter the closer together. All that part of its organization which it had committed to its government, devolves again upon itself, and acts through its medium. When men, as well from natural instinct, as from reciprocal benefits, have habituated themselves to social and civilized life, there is always enough of its principles in practice to carry them through any changes they may find necessary or convenient to make in their government. In short, man is so naturally a creature of society, that it is almost impossible to put him out of it.

Formal government makes but a small part of civilized life; and when even the best that human wisdom

RIGHTS OF MAN.

PART II.

wisdom can devise is established, it is a thing more in name and idea, than in fact. It is to the great and fundamental principles of society and civilization—to the common usage universally consented to, and mutually and reciprocally maintained—to the unceasing circulation of interest, which, passing through its million channels, invigorates the whole mass of civilized man—it is to these things, infinitely more than to any thing which even the best instituted government can perform, that the safety and prosperity of the individual and of the whole depends.

The more perfect civilization is, the less occasion has it for government, because the more does it regulate its own affairs, and govern itself; but so contrary is the practice of old governments to the reason of the case, that the expences of them increase in the proportion they ought to diminish. It is but few general laws that civilized life requires, and those of such common usefulness, that whether they are enforced by the forms of government or not, the effect will be nearly the same. If we consider what the principles are that first condense men into society, and what the motives that regulate their mutual intercourse afterwards, we shall find, by the time we arrive at what is called government, that nearly the whole of the business is performed by the natural operation of the parts upon each other.

Man, with respect to all those matters, is more a creature of consistency than he is aware, or that governments
