CONTENTS.

CHAPTER I.

The colliery districts of the North — Newcastle-upon-Tyne in ancient times — The Roman settlement — Social insecurity in the middle ages — Northumberland roads — The coal-trade — Modern Newcastle — Coal haulage — Early waggon-roads, tramways, and railways — The colliery workmen — Pumping-engines — The pitmen — Coal-staiths — The keelmen Page 1-12

CHAPTER II.

Wylam colliery and village — George Stephenson's birthplace, High Street House — Stephenson's parents — The Stephenson family — Old Robert Stephenson — George's boyhood — Dewley Burn colliery — Sister Nell's bonnet — Employed as a herd-boy — Makes clay engines — Employed as corf-bitter — Drives the gin-horse — Black Callerton colliery — Love of animals — Is made assistant-fireman 13-22

CHAPTER III.

Jolly's Close, Newburn — Wages — Athletic feats — Throckley Bridge — "A made man for life" — Appointed engineman — Studies his engine — Experiments in bird-hatching — Puts himself to school and learns to read — His schoolmasters — Progress in arithmetic — His dog — Learns to brake — Brakesman at Black Callerton — Duties of brakesman — Begins shoe-mending — Fanny Henderson — Saves his first guinea — Fight with a pitman 23-36

CHAPTER IV.

Sobriety and studiousness — Inventiveness — Removes to Willington Quay — Marries Fanny Henderson — Their cottage at Willington — Tries to invent a perpetual-motion machine — William Fairbairn and George Stephenson — Ballast-heaving — Cottage chimney takes fire — Clock-cleaning — Birth of Robert Stephenson — George removes to West Moor, Killingworth — Death of his wife — Engineman at Montrose, Scotland — Return to Killingworth — Brakesman at West Moor — Is drawn for the militia — Thinks of emigrating to America — Takes a contract for brakeing engines — Improves the winding-engine — Cures a pumping-engine — Appointed engine-wright of the colliery 37-55

CONTENTS.

CHAPTER V.

Self-improvement — John Wigham — Studies in natural philosophy — Education of Robert Stephenson — Sent to Rutter's school, Benton — Bruce's school, Newcastle — Literary and Philosophical Institute — Stephenson educates his son in mechanics — Ride to Killingworth — Robert Stephenson's boyish tricks — Repeats the Franklin kite-experiment — Stephenson's cottage, West Moor — Odd mechanical expedients — Competition in last-making — Father and son make a sun-dial — Colliery improvements — Stephenson's mechanical expertness Page 56-72

CHAPTER VI.

Various expedients for facilitating coal-haulage — Sailing-waggons — Mr. Edgworth's experiments — Cugnot's first locomotive steam-carriage — Murdock's model locomotive — Trevithick's steam-carriage and tram-engine — Blenkinsop's engine — Chapman's and Brunton's locomotives — The Wylam waggon-way — Mr. Blackett's experiments — Jonathan Foster — William Hedley — The Wylam engine — Stephenson determines to build a locomotive — Lord Ravensworth — The first Killingworth engine described — The steam-blast invented — Stephenson's second locomotive 73-103

CHAPTER VII.

Frequency of colliery explosions — Accident in the Killingworth pit — Stephenson's heroic conduct — A safety-lamp desired — Dr. Clanny's lamp — Stephenson's experiments on fire-damp — Designs a lamp, and tests it in the pit — His second lamp — Cottage experiments with coal-gas — Rev. Mr. Turner — Stephenson's third lamp — The Stephenson and Davy controversy — Scene at the Newcastle Institute — The Davy testimonial — The Stephenson testimonial — Merits of the "Geordy" lamp 104-128

CHAPTER VIII.

The Killingworth mine-machinery — Robert Bald's account — Stephenson improves his locomotive — Strengthens the road — His steam-springs — Experiments on friction — Steam-locomotion on common roads — Early neglect of the locomotive — Makes an engine for the Duke of Portland — Again contemplates emigration — Constructs the Hetton railway — The working-power employed — Robert Stephenson viewer's apprentice — His pursuits at Killingworth — His father sends him to Edinburgh University — His application to study — An early attachment — Studies geology under Professor Jameson — Geological tour in the Highlands 129-148

CHAPTER IX.

The Bishop Auckland coal-field — Edward Pease projects a railway from Witton to Stockton-on-Tees — The Bill rejected — The line re-surveyed and Act obtained — George Stephenson's visit to Edward Pease — Stephenson appointed engineer of the railway — The line re-surveyed — Mr. Pease visits Killingworth — The Newcastle foundry projected — The railway constructed — Locomotives ordered — Stephenson's anticipations as to railways — Public opening of the line — The coal traffic — The first railway passenger coach — The coaching-traffic described — The "Locomotion" engine — Commercial results of the Stockton and Darlington Railway — Town of Middlesborough created Page 149-177

CHAPTER X.

Insufficiency of the communications between Liverpool and Manchester — The canal monopoly — A tramroad projected — Joseph Sandars — Sir R. Phillips' speculations as to railways — Thomas Gray — William James surveys a line between Liverpool and Manchester — Opposition to the survey — Mr. James's visits to Killingworth — Robert Stephenson assists in the survey — George Stephenson employed — The first prospectus issued — Stephenson's survey opposed — The canal companies — Speculations as to railway speed — Sir John Barrow's views — Stephenson's notions thought extravagant — Article in the 'Quarterly' 178-200

CHAPTER XI.

The Liverpool and Manchester Bill before Parliament — The evidence — George Stephenson in the witness-box — Examined as to speed — His cross-examination — The survey found defective — Mr. Harrison's speech — Evidence of opposing engineers — Mr. Alderson's speech — Evidence against the locomotive — The Bill thrown out — Stephenson's vexation — The scheme revived — The line re-surveyed — Sir Isaac Coffin's speech — The Act passed 201-218

CHAPTER XII.

George Stephenson appointed engineer — Chat Moss described — The resident engineers — Mr. Dixon's visit of inspection — Stephenson's theory of a floating road — Operations begun — Tar-barrel drains — The embankment sinks in the Moss — Proposed abandonment of the work — Stephenson perseveres — The obstacles conquered — Road across Parr Moss — The road formed — The Liverpool Tunnel — Olive Mount Cutting — Sankey Viaduct — Stephenson and Cropper — Stephenson's labours — Pupils and Assistants — His daily life — Practical education — Evenings at home 219-241

CHAPTER XIII.

Robert Stephenson mining engineer in Colombia— Mule journey to Bogota — Mariquita — Silver-mining — Difficulties with the Cornishmen — His cottage at Santa Anna — Longs to return home — Resigns his post — Meeting with Trevithick — Voyage to New York, and shipwreck — Returns to Newcastle, and takes charge of the factory — The working power of the Liverpool and Manchester Railway — Fixed engines and locomotives, and their respective advocates — Walker and Rastrick's report — A prize offered for the best locomotive — Discussions of the Stephensons — Boiler arrangements and heating-surface — Mr. Booth's contrivance — Building of the "Rocket" — The competition of engines at Rainhill — The "Novelty" and "Sanspareil" — Triumph of the "Rocket," and its end .. Page 242-275

CHAPTER XIV.

The railway finished — The traffic arrangements organized — Public opening of the line — Accident to Mr. Huskisson — Arrival of the trains at Manchester — The traffic results — Improvement of the road and rolling-stock — Improvements in the locomotive — The railway workmen — The engine-drivers — The railway a wonder — Road-travelling improved — The Government and railways — Steam on common roads — Joint-stock railway companies — New lines projected — The Grand Junction — Public opposition to railways — Robert Stephenson engineer of Leicester and Swannington Railway — George removes to Snibston, and sinks for coal — Stimulates local enterprise — His liberality 276-300

CHAPTER XV.

The London and Birmingham Railway projected — George and Robert Stephenson appointed engineers — An opposition organized — Hostile pamphlets — Public meetings against the scheme — Robert Stephenson's interview with Sir A. Cooper — The survey obstructed — The line re-surveyed — The Bill in Parliament — Thrown out in the Lords — The project revived — The Act obtained — The works let in contracts — The difficulties of the undertaking — The line described — Blisworth Cutting — Primrose Hill Tunnel — Kilsby Tunnel — Its construction described — The cost of the railway greatly increased — Failure of contractors — Magnitude of the works — The railway navvies 301-324

CHAPTER XVI.

Projection of new lines — Dutton Viaduct on the Grand Junction — The Manchester and Leeds — Incident in Committee — Summit Tunnel, Littleborough — Magnitude of the work — The Midland Railway — The works compared with the Simplon road — Slip near Ambergate — Bull Bridge — The York and North Midland — The Scarborough branch — George Stephenson on estimates — Stephenson on his surveys — His quick observation — His extensive labours — Travelling and correspondence — Life at Alton Grange — Stephenson's London office — Journeys to Belgium — Interviews with the King — Public openings of English railways — Stephenson's assistants — Results of travelling by rail 325-355

xix

CHAPTER XVII.

George Stephenson's views on railways and coal-traffic — Leases the Claycross estate, and sinks for coal — Removes to Tapton House — British Association at Newcastle — Appears at Mechanics' Institutes — Speech at Leeds — His self-acting brake — His views of railway speed — Theory of "undulating lines" — Stephenson's conduct towards the Chester and Birkenhead Company — Atmospheric railways projected — Stephenson opposes the principle of working — The railway mania — Stephenson tries to check it in vain — Parliament and the mania — Stephenson's letter to Sir Robert Peel — George Hudson, the Railway King; his fall — Stephenson again visits Belgium — Interviews with King Leopold — Journey into Spain

Page 356-393

CHAPTER XVIII.

Robert Stephenson's career — His extensive employment as Parliamentary engineer — His rival, Brunel — The Great Western Railway — Width of gauge — Robert Stephenson's caution as to investments — The Newcastle and Berwick Railway — Contest in Parliament — George Stephenson's interview with Lord Howick — The Royal Border Bridge, Berwick — Progress of iron-bridge building — Robert Stephenson constructs the High Level Bridge, Newcastle — Pile-driving by steam — Merits of the structure — The through railway to Scotland completed 394-415

CHAPTER XIX.

George Stephenson surveys a line from Chester to Holyhead — Robert Stephenson afterwards appointed engineer — The railway works under Penmaen Mawr — The crossing of the Menai Strait — Various plans proposed — A tubular beam determined on — Strength of wrought-iron tubes — Mr. William Fairbairn consulted — His experiments — Professor Hodgkinson — Chains proposed, and eventually discarded — The bridge works — The Conway Bridge — Britannia Bridge described — Floating of the tubes — Robert Stephenson's great anxiety — Raising the tubes — The hydraulic press bursts — The works completed — Merits of the Britannia Bridge 416-440

CHAPTER XX.

George Stephenson's life at Tapton — Experiments in horticulture — His farming operations — Affection for animals — Bee-keeping — Reading and conversation — Rencontre with Lord Denman — Hospitality at Tapton — His microscope — A "crowdie night" — Visits to London — Visits Sir Robert Peel at Drayton Manor — His conversation — Encounter with Dr. Buckland — Coal formed by the sun's light — Opening of the Trent Valley line, and great railway celebration — Eulogy of the railway system — Meeting with Emerson — Illness, death, and funeral — Statues of George Stephenson — Robert Stephenson's gradual retirement from the profession — His tubular bridges in Egypt and Canada — Acts as railway arbitrator — Helps to launch the Great Eastern — Enters the House of Commons as member for Whithy — His foreign honours — Illness, death, and funeral

CONTENTS.

CHAPTER XXI.

Characteristics of the Stephensons — Resumé of George Stephenson's history — His patience and perseverance — His thoroughness and honesty — His battle for the locomotive — His manual dexterity — Deportment towards his work-people — His generosity — Compared with James Watt — Social influences of the locomotive — Habits of observation — His conversational powers — A late learner — His goodness of heart — Robert Stephenson's kindness of disposition — His affection for his father — His manners — His generosity — The Civil Engineers' Institute — George Stephenson on politics — Views on Free-trade — Robert a "Protectionist" — Services rendered to civilization by the Stephensons Page 465-482

APPENDIX.

Narrative of George Stephenson's Inventions and Improvements in connection with the Locomotive Engine and Railways. By his Son, Robert Stephenson 485-496

The Steam-blast in the Locomotive, and the Merits of the several Claimants to the Invention discussed; including Robert Stephenson's Remarks thereon 497-504

INDEX 505-512
