CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

Mathematics

From its pre-historic roots in simple counting to the algorithms powering modern desktop computers, from the genius of Archimedes to the genius of Einstein, advances in mathematical understanding and numerical techniques have been directly responsible for creating the modern world as we know it. This series will provide a library of the most influential publications and writers on mathematics in its broadest sense. As such, it will show not only the deep roots from which modern science and technology have grown, but also the astonishing breadth of application of mathematical techniques in the humanities and social sciences, and in everyday life.

C.G.J. Jacobi's Gesammelte Werke

One of the greatest mathematicians of the nineteenth century, Carl Gustav Jacob Jacobi (1804–51) burst into the limelight with his redevelopment, together with Niels Henrik Abel (1802–29), of the theory of elliptic functions. His pioneering work was characterised by the variety of problems tackled and the power of the tools used to tackle them. His lasting influence on rational mechanics, number theory, partial differential equations, complex variable theory and computation is marked by the number of fundamental concepts that bear his name (the Jacobian, the Jacobi sum and the Jacobi symbol, among others). His collected works, comprising treatises, letters and papers written in German, Latin and French, were published in eight volumes between 1881 and 1891. Edited by fellow German mathematician Karl Weierstrass (1815–97), Volume 4 appeared in 1886.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.

INHALTSVERZEICHNISS DES VIERTEN BANDES.

	Seite
1. Über die Integration der partiellen Differentialgleichungen erster Ordnung	1—15
2. Über die Pfaff'sche Methode, eine gewöhnliche lineare Differentialgleichung zwischen $2n$ Variablen durch ein System von n Gleichungen zu integrieren	17—29
3. Bemerkung zu der Abhandlung des Herrn Prof. Scherk: Über die Integration der Gleichung $\frac{d^n y}{dx^n} = (\alpha + \beta x)y$	31—34
4. Sur le mouvement d'un point et sur un cas particulier du problème des trois corps . . .	35—38
5. Zur Theorie der Variationsrechnung und der Differentialgleichungen	39—55
6. Über die Reduction der Integration der partiellen Differentialgleichungen erster Ordnung zwischen irgend einer Zahl Variablen auf die Integration eines einzigen Systems gewöhnlicher Differentialgleichungen	57—127
7. Note sur l'intégration des équations différentielles de la dynamique	129—136
8. Neues Theorem der analytischen Mechanik	137—142
9. Sur un théorème de Poisson	143—146
10. Dilucidationes de aequationum differentialium vulgarium systematis earumque connexionem cum aequationibus differentialibus partialibus linearibus primi ordinis	147—255
11. De integratione aequationis differentialis $(A + A'x + A''y)(x dy - y dx) - (B + B'x + B''y)dy + (C + C'x + C''y)dx = 0$. . .	257—262
12. De motu puncti singularis	263—288
13. Sur un nouveau principe de la mécanique analytique	289—294
14. Sur l'élimination des noeuds dans le problème des trois corps	295—314
15. Zusatz zu der vorhergehenden Abhandlung	315—316
16. Theoria novi multiplicatoris systemati aequationum differentialium vulgarium applicandi . .	317—509
17. Sul principio dell'ultimo moltiplicatore e suo uso come nuovo principio generale di meccanica	511—522
18. Zwei Beispiele zur neuen Methode der Dynamik	523—528

NACHLASS.

19. Problema trium corporum mutuis attractionibus cubis distantiarum inverse proportionalibus recta linea se moventium	531—539
20. Anmerkungen des Herausgebers	540—541
