## CAMBRIDGE LIBRARY COLLECTION

*Books of enduring scholarly value*

### **Maritime Exploration**

This series includes accounts, by eye-witnesses and contemporaries, of voyages by Europeans to the Americas, Asia, Australasia and the Pacific during the colonial period. Driven by the military and commercial interests of powers including Britain, France and the Netherlands, particularly the East India Companies, these expeditions brought back a wealth of information on climate, natural resources, topography, and distant civilisations. Their detailed observations provide fascinating historical data for climatologists, ecologists and anthropologists, and the accounts of the mariners' experiences on their long and dangerous voyages are full of human interest.

### **Narrative of the Circumnavigation of the Globe by the Austrian Frigate *Novara***

Joined by seven eminent natural scientists, including Karl von Scherzer (1821–1903), the Austrian naval expedition of 1857–9 was remarkable for its globe-spanning scale. During the course of the voyage, the naturalists collected an abundance of samples which contributed to several scientific discoveries, including the isolation of cocaine in its pure form. Some of the investigations also revolutionised knowledge in such fields as geology, oceanography, hydrography and geomagnetism, and are still being studied by modern-day researchers. Prepared by Scherzer and first published in English in 1861–2, this is a compelling three-volume account of the mission, remaining relevant to scholars interested in naval exploration and the history of science. Volume 2 covers the leg from India to Australia, with notes on the Nicobar Islands, Singapore, Java, Manila, Hong Kong, Shanghai, and Pacific archipelagos.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
