CAMBRIDGE LIBRARY COLLECTION
Books of enduring scholarly value

Philosophy
This series contains both philosophical texts and critical essays about philosophy, concentrating especially on works originally published in the eighteenth and nineteenth centuries. It covers a broad range of topics including ethics, logic, metaphysics, aesthetics, utilitarianism, positivism, scientific method and political thought. It also includes biographies and accounts of the history of philosophy, as well as collections of papers by leading figures. In addition to this series, primary texts by ancient philosophers, and works with particular relevance to philosophy of science, politics or theology, may be found elsewhere in the Cambridge Library Collection.

A System of Moral Philosophy
Often described as the father of the Scottish Enlightenment, Francis Hutcheson (1694–1746) was born in the north of Ireland to an Ulster-Scottish Presbyterian family. Organised into three ‘books’ that were divided between two volumes, A System of Moral Philosophy was his most comprehensive work. It synthesised ideas that he had formulated as a minister and as the Chair of Moral Philosophy at the University of Glasgow (1729–46). Published posthumously by his son in 1755, prefaced by an account of his life, it is the only treatise by Hutcheson for which a manuscript is known to have survived. Asserting that individual natural rights derive from an innate understanding of moral behaviour, Hutcheson offers a model that mediates between individual interests and communal ideals. Containing the concluding chapters of Book 2 and Book 3, Volume 2 explores the role of familial and political governance in relation to communal happiness.
Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
