CONTENTS.

LECTURE I.

The Nerves and Sensation—Production and Propagation of Sonorous Motion—Experiments on Sounding Bodies placed in Vacuo—Action of Hydrogen on the Voice—Propagation of Sound through Air of varying density—Reflection of Sound—Echoes—Refraction of Sound—Inflection of Sound; Case of Erith Village and Church—Influence of Temperature on Velocity—Influence of Density and Elasticity—Newton's calculation of Velocity—Thermal changes produced by the Sonorous Wave—Laplace's correction of Newton's Formula—Ratio of specific Heats at constant pressure and at constant volume deduced from velocities of Sound—Mechanical equivalent of Heat deduced from this ratio—Inference that Atmospheric Air possesses no sensible power to radiate Heat—Velocity of Sound in different Gases—Velocity in Liquids and Solids—Influence of Molecular Structure on the velocity of Sound	PAGE 1
SUMMARY OF LECTURE I.	44

LECTURE II.

Physical distinction between Noise and Music—A Musical Tone produced by periodic, Noise produced by unperiodic, Impulses—Production of Musical Sounds by Taps—Production of Musical Sounds by Puffs—Definition of Pitch in Music—Vibrations of a Tuning-fork; their graphic representation on Smoked Glass—Optical expression of the Vibrations of a Tuning-fork—Description of the Syren—Limits of the Ear; highest and deepest Tones—Rapidity of Vibration determined by the Syren—Determination of the Lengths of Sonorous Waves—Wave-lengths of the Human Voice in Man and Woman—Transmission of Musical Sounds through Liquids and Solids	48
SUMMARY OF LECTURE II.	83

LECTURE III.

Vibrations of Strings—How employed in Music—Influence of Sound-Boards—Laws of Vibrating Strings—Illustrations on a large scale—Combina-

CONTENTS.

tion of Direct and Reflected Pulses—Stationary and Progressive Waves—Nodes and Ventral Segments—Application of results to the vibrations of Musical Strings—Experiments of M. Melde—Strings set in vibration by Tuning-forks—Laws of Vibration thus demonstrated—Harmonic Tones of Strings—Definitions of Timbre or Quality, of Overtones and Clang—Abolition of special Harmonics—Conditions which affect the intensity of the Harmonic Tones—Optical examination of the Vibrations of a Piano-wire	PAGE 86
SUMMARY OF LECTURE III.	125

LECTURE IV.

Vibrations of a Rod fixed at both ends: its Subdivisions and corresponding Overtones—Vibrations of a Rod fixed at one end—The Kaleidophone—The Iron Fiddle and Musical Box—Vibrations of a Rod free at both ends—The Claquebois and Glass Harmonica—Vibrations of a Tuning-fork: its Subdivision and Overtones—Vibrations of Square Plates—Chladni's discoveries—Wheatstone's Analysis of the Vibrations of Plates—Chladni's Figures—Vibrations of Discs and Bells—Experiments of Faraday and Strehlke	128
SUMMARY OF LECTURE IV.	156

LECTURE V.

Longitudinal Vibrations of a Wire—Relative velocities of Sound in Brass and Iron—Longitudinal Vibrations of Rods fixed at one end—Of Rods free at both ends—Divisions and Overtones of Rods vibrating longitudinally—Examination of Vibrating Bars by Polarised Light—Determination of Velocity in Solids—Resonance—Vibrations of stopped Pipes: their Divisions and Overtones—Relation of the Tones of stopped Pipes to those of open Pipes—Condition of Column of Air within a Sounding Organ-pipe—Reeds and Reed-pipes—The Organ of Voice—Overtones of the Vocal Chords—The Vowel Sounds—Kundt's experiments—New methods of determining Velocity of Sound	159
SUMMARY OF LECTURE V.	212

LECTURE VI.

Sounding Flames—Influence of the Tube surrounding the Flame—Influence of Size of Flame—Harmonic Notes of Flames—Effect of Unisonant Notes on Singing Flames—Action of Sound on Naked Flames—Experiments with Fish-tail and Bat's-wing Burners—Experiments on Tall Flames—Extraordinary delicacy of Flames as Acoustic Reagents—The Vowel Flame—Action of Conversational Tones upon Flames—Action of Musical Sounds on unignited Jets of Gas—Constitution of Water Jets—Action of Musical Sounds on Water Jets—A Liquid Vein may compete in point of delicacy with the Ear	217
SUMMARY OF LECTURE VI.	252

xiii

LECTURE VII.

Law of Vibratory Motions in Water and Air—Superposition of Vibrations —Interference and Coincidence of Sonorous Waves—Destruction of Sound by Sound—Combined action of two Sounds nearly in unison with each other—Theory of Beats—Optical Illustration of the principle of Inter- ference—Augmentation of Intensity by partial extinction of Vibrations —Resultant Tones—Conditions of their Production—Experimental Illustrations—Difference Tones and Summation Tones—Theories of Young and Helmholtz	PAGE 255
SUMMARY OF LECTURE VII.	284

LECTURE VIII.

Combination of Musical Sounds—The smaller the two Numbers which express the Ratio of their Rates of Vibration, the more perfect is the Harmony of two Sounds—Notions of the Pythagoreans regarding Musical Consonance—Euler's theory of Consonance—Physical Analysis of the question—Theory of Helmholtz—Dissonance due to Beats—Inter- ference of Primary Tones and of Overtones—Graphic representation of Consonance and Dissonance—Musical Chords—The Diatonic Scale— Optical Illustration of Musical Intervals—Lissajous' Figures—Sympa- thetic Vibrations—Mechanism of Hearing—Schultze's Bristles—The Otolithes—Corti's Fibres—Conclusion	286
