CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

Botany and Horticulture

Until the nineteenth century, the investigation of natural phenomena, plants and animals was considered either the preserve of elite scholars or a pastime for the leisured upper classes. As increasing academic rigour and systematisation was brought to the study of 'natural history', its subdisciplines were adopted into university curricula, and learned societies (such as the Royal Horticultural Society, founded in 1804) were established to support research in these areas. A related development was strong enthusiasm for exotic garden plants, which resulted in plant collecting expeditions to every corner of the globe, sometimes with tragic consequences. This series includes accounts of some of those expeditions, detailed reference works on the flora of different regions, and practical advice for amateur and professional gardeners.

Conversations on Vegetable Physiology

Jane Haldimand Marcet (1769–1858) wrote across a range of topics, from natural philosophy to political economy. Her educational books were especially intended for female students, to combat the prevalent idea that science and economics were unsuitable for women, but they found broader popularity: Michael Faraday, as a young bookbinder's apprentice, credited Marcet with introducing him to electrochemistry. This two-volume work, first published in 1829, is a beginner's guide to botany. Since the chief aim was accessibility, Marcet does not dwell on the often burdensome process of plant classification, but focuses on plant forms and botany's practical applications. She presents the facts in the form of simple conversations between two students and their teacher. Based on the lectures of the Swiss botanist Candolle, Volume 2 considers agriculture and plant diseases, the cultivation of trees and culinary vegetables, and the effects of humans on flora.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.

TABLE OF CONTENTS.

VOL. II.

ON THE MULTIPLICATION OF PLANTS.

CONVERSATION XV.

ON THE MULTIPLICATION OF PLANTS BY SUBDIVISION.

Two Modes of multiplying Plants ; by Seed, and by
 Subdivision. — Slips or Layers preserve the pecu-
 liar Qualities of the Fruit, tend to diminish the
 Quantity of Seed, and to improve the Fruit. —
 Germs. — Three Modes of subdividing Plants :
 1. By Layers, various Modes of producing them.
 — Layers above Ground. — Multiplication of Plants
 by Slips. - - - - - Page 1

CONVERSATION XVI.

ON GRAFTING.

The Graft or Scion. — Stock. — Grafting improves
 the Quality of the Fruit. — Plants of the same
 Family can alone be grafted on each other : other

CONTENTS.

circumstances requisite. — Grafting accelerates the
Period of Bearing of Seedling Trees. — Mechanical
Part of the Process. — Three Classes, *Unitiges*,
Omnitiges, *Multitiges*. — Various Modes of graft-
ing: 1. By Approach; 2. By Scions; 3. By Bour-
geons or Buds. Page 17

CONVERSATION XVII.

ON THE MULTIPLICATION OF PLANTS BY SEED. —
THE FLOWER.

Organs of the Flower: Calyx, Corolla, Petals, Nec-
tary, Ovary or Seed Vessel, Carpel, Style, Stigma,
Pistil, Stamens, Filaments, Anthers. — Palm Trees.
Pedunculus. — Torus, Pedicles, Receptacle, In-
florescence. — Calendar of Flora. — Period of
Flowering. — Mode of advancing or retarding it.
— Annular Section. — Fructification of the Seed
prevented by Rain. 29

CONVERSATION XVIII.

ON COMPOUND FLOWERS.

A Head, or Capitata. — Receptacle. — Involucrum.
— Compound Flowers. — Calyx. — Elongation of
Tuft or Pappus. — Coma. — Akéne. — Description
of the Florets of a Compound Flower. 47

vii

CONVERSATION XIX.

ON FRUIT.

Conversion of the Flower into Fruit. — Pericarp. —
Pea Pod. — Legumen. — Epicarp. — Mesocarp. —
Endocarp. — Fruits composed of one Carpel. —
Drupa, or Stone Fruits. — Fruits composed of several
Carpels resulting from a single Flower. —
Pæony. — Raspberry. — Fruits formed of several
Carpels, with the Calyx adhering. — Pome: Apple,
Pear, Quince, Medlar. — Bacca or Berry: Goose-
berry, Grape, Currant, Strawberry, Mulberry. —
Fir Cone. — Akéne. — Magnolia Cone. — Spanish
Chesnut. — Horse Chesnut. — Page 61

CONVERSATION XX.

ON THE SEED.

Structure of the Seed. — Spermoderm. — Testa. —
Mesosperm. — Endopleura. — Amnios. — Embryo
Plant. — Cotyledons. — Eye, or Hilum. — Cicatrix.
— Albumen. — Nucleus, or Kernel. — Germination.
— Embryo, consisting of the Radicle, Plumula, and
Cotyledons. — Seeds in germinating require Mois-
ture and Subtraction of Carbon. — Oxygen required
for that Purpose. — Light injurious to Germina-
tion. — Temperature requisite. — Of sowing Seed.
— Knight's Experiment on the Direction of the
Roots and Stems. — Modes of sowing. — Advan-
tage of sowing thin. — Sowing in Gardens. —
Hot beds, Garden-pots, &c. — Transplantation. 83

CONTENTS.

CONVERSATION XXI.

ON THE CLASSIFICATION OF PLANTS.

Necessity of some Mode of Classification. — Species.
— Genera. — Nomenclature. — Character of Ge-
nera. Page 107

CONVERSATION XXII.

ON ARTIFICIAL SYSTEMS OF CLASSIFICATION OF
PLANTS.

Analytic Method. — Flore Françoise. — System of
Linnæus. 119

CONVERSATION XXIII.

ON THE NATURAL SYSTEMS OF CLASSIFICATION.

Method of *Tatonnement*. — Method of general Com-
parison of Mr. Adamson. — Method of Subordina-
tion of M. De Jussieu and M. De Candolle. — Com-
parative Importance of Organs. — Organs of Re-
production and of Nutrition. 134

CONVERSATION XXIV.

ON BOTANICAL GEOGRAPHY.

Geographical Distribution of Plants. — Difference of
Habitation and *Station* of Plants. — Botanical Re-
gions. — Their Boundaries. — Various Modes of
conveying Seed from one Region to another. —

CONTENTS.

ix

Proportion of Monocotyledons in the Vegetable Kingdom.—Dycotyledons increase towards the Equator, Acotyledons towards the Pole.—Ligneous Plants increase towards the Equator, Herbaceous Plants towards the Pole.—Annuals most common in Temperate Climates.—Greater Variety of Plants in hot, than in cold Climates.—*Social* Plants. - - - - Page 153

CONVERSATION XXV.

ON THE INFLUENCE OF CULTURE ON VEGETATION.

Races. — Varieties and Variations, derived from Species. — Influence of Culture in producing these Modifications. — Hebrides. — Dutch Tulips. — Hydrangia. — Effect of Soil on Variations. — Of Grafting. — Of Lopping. — Of Pruning Trees. — Resinous Trees. — Green-house Plants. — Fruit Trees. - - - - 167

CONVERSATION XXVI.

ON THE DEGENERATION AND THE DISEASES OF PLANTS.

Degeneration of Organs producing Monstrosities. — Monopetals. — Failure of Seed. — Double-blossomed Flowers. — Conversion of Petioles into Leaves. — Acacia of Arabia — Conversion of Petioles into Tendrils, of young Shoots into Thorns — Difference of Thorns and Prickles. — Diseases of Plants ranged under Six Heads: 1st Class, Constitutional Diseases — Variegated Leaves. — 2d

CONTENTS.

Class, Diseases produced by Light, Heat, Water, Air, or Soil, improperly applied. — 3d Class, Diseases from Contusions and external Injury — Loss of Leaves and of Bark — Flagellations — Unskilful Pruning — Pollarding. - - Page 177

CONVERSATION XXVII.

THE DISEASES OF PLANTS CONTINUED.

4th Class, Diseases arising from the Action of Animals on Plants — Devouring of Leaves by Quadrupeds or Insects, &c. — 5th Class, Action of Plants on each other — Parasitical Plants — True and False Parasites, External and Internal — Creeping Plants — Rhizomorpha — Mistletoe — Cuscuta — Orobanche — Fungi — Erishe — Rhizotonia — Smut — Rot — Ergot — Rust. — 6th Class, Diseases of resulting from Age, and causing the Death of Plants. - - - - - 197

CONVERSATION XXVIII.

ON THE CULTIVATION OF TREES.

Greatest Variety of Trees in tropical Climates. — Natural Forests, tolerant and intolerant. — Thirty-four Species of European Forest Trees, divided into Four Classes. — Various Modes of felling Forests. — Wood for Fuel. — Cultivation of single Trees. — Of lopping Trees. — Transplanting. — Sir Henry Stewart's Process. — Hedges. — Fruit Trees. - - - - - 214

CONVERSATION XXIX.

ON THE CULTIVATION OF PLANTS WHICH PRODUCE
FERMENTED LIQUORS.

Fermentation. — Of Sap. — Of Fruits. — Of Grain,
producing Wine, Beer, Cyder, Perry. — History
and Culture of the Vine. - - Page 239

CONVERSATION XXX.

ON THE CULTIVATION OF GRASSES, TUBEROUS ROOTS,
AND GRAIN.

Meadows, perennial, renovated chiefly by the
Spreading of the Roots, require a moist Cli-
mate. — Sustain the Soil on Declivities. — Arti-
ficial Grasses, not forming permanent Meadows, but
entering into a Course of Cropping. — Clover. —
Saintfoin. — Lucerne. — Leaves used as Forage for
Cattle. — Tuberous Roots: Beet, Parsnips, Tur-
nips, Carrots, Potatoes. — Of Corn: Straw, Grain,
Flour, Husk, Beard. — Corn divided into Three
Series: 1. Wheat, Fermentation of Bread, Glu-
ten, Yest, Leven, Rye, Barley; 2. Series: Oats,
Philares, Rice; 3. Series: Corn having the Pistils
and Stamens in different Flowers. - - 254

CONVERSATION XXXI.

ON OLEAGINOUS PLANTS AND CULINARY VEGETABLES.

Fixed Oils. — Volatile Oils. — Fixed Oils ranged
under Three Heads: 1. Olive Oil, the Produce of
Warm Climates; 2. Nut Oil, of Temperate Cli-
