

CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

Botany and Horticulture

Until the nineteenth century, the investigation of natural phenomena, plants and animals was considered either the preserve of elite scholars or a pastime for the leisured upper classes. As increasing academic rigour and systematisation was brought to the study of 'natural history', its subdisciplines were adopted into university curricula, and learned societies (such as the Royal Horticultural Society, founded in 1804) were established to support research in these areas. A related development was strong enthusiasm for exotic garden plants, which resulted in plant collecting expeditions to every corner of the globe, sometimes with tragic consequences. This series includes accounts of some of those expeditions, detailed reference works on the flora of different regions, and practical advice for amateur and professional gardeners.

Commercial Botany of the Nineteenth Century

The nineteenth century witnessed great advances in technology which made transporting natural resources overseas significantly easier. At the centre of a global empire, Britain felt the full economic benefits of introducing and cultivating a range of commercial plants both domestically and in her colonies abroad. First published in 1890, this succinct work by the English botanist John Reader Jackson (1837–1920) surveys these plants. The concise descriptions are enhanced by instructive drawings of significant species. The introduction also contains a chronological table of the century's most important developments in commercial botany. This is followed by chapters organised according to the applications of plants, notably in food, drink, medicine, and the building trade. Jackson points out the species which revolutionised these industries, identifying those at the heart of rapidly growing markets. The coverage includes many commodities which remain commercially significant, such as palm oil, sugar cane, and cotton.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
