TABLE OF CONTENTS.

PART I.

	VOL. I.
Of the College of Physicians	1
Its powers and privileges	23
Of the College of Surgeons	54
Of the Society of Apothecaries	59
Of the exemptions and liabilities of Medical practitioners	72
Of actions by Medical practitioners	77
Of actions against Medical practitioners	80
Midwifery	82
Of the preservation of Public Health	85
Burial of the dead	92
Of Quarantine, Lazarettos, and other establishments of Plague Police	104
I. Are all epidemic Fevers contagious?	115
II. Does the matter of contagion require the aid of a certain state of the air ("Pestilential constitution of the Atmosphere") to give effect to its powers and propagation; and to what causes are the decline and cessation of a contagious pestilence to be attributed?	129
III. Can filth and animal putrefaction generate contagion?	122
IV. Can a fever produced by fatigue, unwholesome food, &c. be rendered contagious in its career by animal filth, impure air, &c.?	126
Medical Police	138
Bills of Mortality	134
VOL. I.	

PART II.

	VOL. I.
Introduction	151
Of Medical Evidence generally	153
Of Marriage	168
Of Divorce or Nullity	176
Various questions connected with the foregoing sub- jects, elucidated by Physiological remarks	179
I. Of Ages, especially that of puberty	—
II. Of Impotence and Sterility	197
1. Of Impotence	—
1. Organic Causes of Impotence	—
In Males	—
In Females	206
2. Functional causes of Impotence	208
3. Moral causes of Impotence	210
2. Of Sterility	212
1. Organic causes	—
2. Functional causes	—
III. Of the Legitimacy of Children	215
Supposititious Children	219
Tenant to the Courtesey	223
Of Monsters and Hermaphrodites legally considered	227
Physiological illustrations connected with the fore- going subjects	230
Of Conception and Utero-gestation	—
Of Parturition or Delivery	241
1. Whether a woman can be delivered during a state of in- sensitivity, and remain unconscious of the event?	243
2. How far the term of Utero-gestation can be shortened, to be compatible with the life (<i>viabilité</i>) of the offspring?	—
3. Whether to any, and to what probable extent, the natu- ral term of Utero-gestation can be protracted?	245
4. What is the value of those signs by which we seek to establish the fact of a recent delivery?	249
5. Are there any, and what diseases, whose effects may be mistaken for traces of a recent delivery?	254
6. Can we determine by any signs whether a woman has ever borne a child, although at a period remote from that of the examination?	256
7. What are the earliest and latest periods of life, at which women are capable of child-bearing?	—
8. What is the possible number of children that can be pro- duced at one birth?	259
9. Is super-fœtation possible, and under what circumstances, and at what period of gestation can a second conception take place?	260

Table of Contents.

iii

	VOL. I.
10. What are the causes of Abortion - - -	269
11. Under what circumstances, and by what means, is it morally, legally, and medically proper, to induce premature labour? - - -	271
12. What circumstances will justify the Cæsarean operation, and of what value is the section of the Symphysis Pubis, or Sigaultian operation? - - -	274
Of Extra-uterine Conception	281
Of Hermaphrodites	283
Of Idiots and Lunatics	289
Of Lunatic Asylums	304
Medical and Physiological Illustrations of Insanity	307
1. Whether the person is actually insane, and if so, what are the proofs of his derangement? - - -	317
2. Whether the proofs are of such a nature as to suffer the individual, with propriety, to retain his liberty, and enjoy his property? - - -	321
3. Whether there has been any lucid interval, and of what duration? - - -	322
4. Whether there is any probable chance of recovery; and in case of convalescence, whether the cure is likely to be permanent? - - -	323
Of Nuisances, legally, medically, and chemically considered	330
1. Of those manufactories, during whose operation gaseous effluvia, the products of <i>fermentation</i> , or <i>putrefaction</i> , escape into the atmosphere, and are either noxious from their effects on animals, or insufferable from the noisomeness of their smell. - - -	—
2. Of those in which, <i>by the action of fire</i> , various noxious principles are evolved. - - -	—
3. Of those which yield waste liquids that poison the neighbouring springs and streams. - - -	—
4. Of those trades, whose pursuit is necessarily accompanied with great noise. - - -	—
Of Impositions	355
Feigned or Simulated diseases	—
Insanity - - -	359
Somnolency - - -	—
Syncope - - -	360
Epilepsy - - -	361
Hysteria - - -	362
Shaking Palsy - - -	—
Fever - - -	364
Dropsy - - -	—
Jaundice - - -	365
Hæmophthisis - - -	—
Vomiting of Blood - - -	—
Urine - - -	—
Bloody Urine - - -	—
Incontinence of Urine - - -	366

Cambridge University Press

John Ayrton Paris and J. S. M. Fonblanque

Table of Contents

[More information](#)

iv

Table of Contents.

	VOL. I.
Gravel and Stone - - - - -	—
Alvine Concretions - - - - -	367
Abstinence from Food - - - - -	368
Deafness and Dumbness - - - - -	370
Blindness - - - - -	371
Ophthalmia - - - - -	372
Ulcers, &c. - - - - -	—
Hernia - - - - -	373
Of the Adulteration of Food	374
Bread	375
Beer	377
Milk	378
Policy of Insurance on Lives	381
Survivorship	388

PART III.

Introduction	399
Arson	402
1. Spontaneous Combustion by friction	403
2. ————— the fermentation of Vegetable and Animal substances	404
3. ————— Chemical action	406
Human Combustion	412
Rape	416
Of Homicide generally	VOL. II.—1
Of Real and Apparent Death	3
Of the Physiological causes and Phenomena of Sudden Death	16
Syncope	25
Suffocation	32
1. By Drowning	35
2. By Hanging	42
1. By pressure on the Vessels	43
2. ————— Nerves of the Neck	44
3. ————— Fracture of the Spine, and Dislocation of the Neck	—
3. By Manual Strangulation	46
4. By Smothering	48
5. By the Inhalation of Air deprived of Oxygen	—
6. By other modes	55

Table of Contents.

v

	VOL. II.
Death by Exposure to Cold	59
the Agency of Heat	63
Lightning	—
Starvation	67
Application of the physiological facts established in the preceding Chapters, to the general treatment of Asphyxia	75
On the manner of producing Artificial Respiration	78
By the Application of Heat - - - - -	81
Internal Exhibition of Stimulants - - - - -	82
Electricity - - - - -	—
Treatment of particular cases of Asphyxia	84
Case 1. Wherein the action of the heart fails before that of the respiratory organs	—
Case 2. Wherein the function of respiration ceases, while the heart continues to circulate black blood	86
Of the Coroner's Inquest	93
Suicide	104
Of Murder generally	110
1. By exposing a sick or weak person, or infant, to the cold	—
2. ————— an impotent person abroad, so that he may receive mortal harm	—
3. By Imprisoning a man so strictly that he dies	111
4. By Wounding or Blows	116
<i>a.</i> Incised wounds, or cuts - - - - -	119
<i>b.</i> Punctures - - - - -	120
<i>c.</i> Bruises - - - - -	121
<i>d.</i> Lacerations - - - - -	123
<i>e.</i> Gun-shot wounds - - - - -	124
5. By Poisoning	128
Of Poisons, chemically, physiologically, and patho- logically considered	131
Their literary history	—
Of slow, consecutive, and accumulative Poisons	143
1. Of slow Poisons - - - - -	—
2. Of consecutive Poisons - - - - -	147
3. Of accumulative Poisoning - - - - -	148
General remarks on the Medical Evidence required to substantiate an accusation of Poisoning	153
1. Whether all, or most of the symptoms, characteristic of the action of Corrosive and Narcotic Poisons, may not arise from morbid causes of spontaneous origin? - - - - -	155
2. Whether organic lesions similar to those produced by poison- ing, may not occasionally result from natural causes? - - - - -	162

	VOL. II.
3. Whether the rapid progress of putrefaction in the body, generally, or in any particular part, is to be considered as affording presumptive evidence, in support of an accusation of poisoning? - - - - -	182
4. How far the absence of poison, or the inability of the Chemist to detect it, in the body, or in the fluid ejected from it, is to be received as a negative to an accusation of poisoning - - -	—
5. What degree of information can be derived from administering the contents of the stomach of a person supposed to have been poisoned, to dogs, or other animals? - - -	193
On the Classification of Poisons	199
A classification of the different modes by which Poisons produce their effects	207
Mineral Poisons	209
Class I. CORROSIVE POISONS	210
<i>Arsenic</i>	—
Arsenious acid, or white oxide of arsenic	212
I. Symptoms of poisoning by the Arsenious acid	216
— the first degree - - - - -	—
— the second degree - - - - -	217
Different modes of poisoning by the Arsenious acid - - -	220
Physiological action of Arsenious acid - - - - -	223
Organic lesions discovered on dissection - - - - -	225
Of the Chemical processes by which the presence of Arsenious acid may be detected	232
1. The Arsenic is in a solid form - - - - -	—
A. By its reduction to the metallic state - - - - -	233
B. By the application of certain re-agents, or tests, to its solution - - - - -	240
2. The arsenious acid is mixed with various alimentary and other substances - - - - -	252
Arsenic acid, and its salts	256
The sulphurets of arsenic	257
<i>Mercury</i>	—
Corrosive sublimate	—
Symptoms of poisoning by corrosive sublimate - - - - -	259
1. Symptoms which follow a large dose - - - - -	260
2. Symptoms which are produced by the repetition of small doses - - - - -	—
Physiological action of Corrosive Sublimate - - - - -	262
Antidotes to Corrosive Sublimate - - - - -	263
Organic lesions discovered on dissection - - - - -	266
Of the Chemical processes for its detection - - - - -	257
a. By its metallization through the agency of Galvanism - - - - -	268
b. By precipitating metallic mercury from its solution, by the contact of a single metal - - - - -	269
3. It is dissolved in various coloured liquids - - - - -	272
4. It is mixed or combined with some medicinal body in a solid form - - - - -	273

Table of Contents.

vii

	VOL. II.
5. It is united with alimentary substances which have effected its decomposition	274
6. It is decomposed, and a part exists in intimate combination with the membranes of the alimentary canal	—
Red Oxide of Mercury	275
Red Precipitate	276
Other preparations of Mercury	—
<i>Antimony</i>	277
Emetic Tartar, Tartarized Antimony	279
Symptoms of poisoning by it	280
Antidotes	280
Physiological action of Emetic Tartar	282
Organic lesions discovered by dissection	283
Tests for the detection of Emetic Tartar	284
1. The poison is in a solid form	—
2. It is mixed with various alimentary substances	285
<i>Copper</i>	—
Oxide of Copper	287
Green Carbonate of Copper, Natural Verdegriis	288
Verdegriis	290
Blue Vitriol	291
Symptoms of poisoning by the Salts of Copper	291
Organic lesions discovered on dissection	—
Chemical detection of their presence	—
A. By their reduction to a metallic state	292
B. By the application of certain tests to their solutions	293
The suspected poison is mixed with alimentary substances	294
<i>Tin, and its Murates</i>	295
<i>Zinc</i>	296
White Vitriol, Sulphate of Zinc	297
Symptoms of poisoning by it	—
Organic lesions	298
Chemical processes for its detection	—
<i>Silver</i>	299
Lunar Caustic, Nitrate of Silver	—
Chemical processes for its detection	300
<i>The Concentrated Acids</i>	301
Oil of Vitriol, Sulphuric Acid	302
Symptoms of poisoning by it	303
Organic lesions	304
Antidotes	—
Chemical processes for its detection	305
Nitric Acid	—
Symptoms of poisoning by it	306
Organic lesions	309
Chemical processes for its detection	312
Spirit of Salt, Muriatic Acid	313
Symptoms of poisoning by it	—

viii

Table of Contents.

	VOL. II.
Chemical processes for its detection	314
Oxalic Acid	315
Symptoms of poisoning by it	316
Antidotes	—
Chemical tests for its detection	—
<i>Boiling Water</i>	—
<i>Melted Lead</i>	317
<i>The Caustic Alkalies</i>	318
Potass or Potash	319
Liquor Potassæ	320
Chemical tests for its detection	—
Potassa Fusa, or Kali Causticum	321
Potassa cum Calce	—
Sub-carbonate of Potash, Pearl Ash	322
Symptoms of poisoning by any of the above	—
Preparations	—
Antidotes	323
Organic lesions	—
Soda	—
Ammonia and its Carbonate	—
Symptoms of poisoning by Ammonia	324
<i>The Caustic Alkaline Earths</i>	325
Quick Lime	—
Symptoms of poisoning by Lime	—
Organic lesions	326
Tests for its detection	—
Baryta, and its Salts	327
Symptoms of poisoning by Baryta	—
Physiological action of it	328
Antidotes	—
Chemical tests for its detection	329
<i>Cantharides</i>	330
Symptoms of poisoning by it	331
Organic lesions	342
Methods of detecting its presence	—
<i>Phosphorus</i>	333
Symptoms of poisoning by it	—
<i>Mechanical Poisons, Powdered Glass, &c.</i>	334
Class II. ASTRINGENT POISONS.	336
<i>Lead</i>	—
Sugar of Lead, Plumbi super acetis	349
Goulard's Extract, Liquor Plumbi sub-acetatis	350
White Lead, Sub-carbonate of Lead, Cerusse	—
Litharge, semi-vitrified Oxide of Lead	357
Red Lead, Minium	352
Symptoms of poisoning by the different preparations of Lead	353
By small and repeated doses	355

ix

	VOL. II.
Organic lesions - - - - -	357
Physiological action of Lead poisons - - -	358
Chemical processes for their detection - - -	361
1. When it exists in some unknown state of combination	—
2. Is dissolved in Wine - - - - -	633
3. Is dissolved in Oils - - - - -	364
4. Is mixed with alimentary matter - - -	365
<i>Vegetable Poisons</i>	366
Class III. ACRID OR RUBEFACIENT POISONS .	371
Camboge or Gamboge	—
White Hellebore, <i>Veratrum Album</i>	372
Black Hellebore, <i>Melampodium</i>	374
Fœtid Hellebore, <i>Helleborus fœtidus</i>	375
Elatarium, Wild Cucumber	—
Colocynth, <i>Coloquintida</i> . Bitter Apple	377
Euphorbium	—
Savine, <i>Juniperus Sabina</i>	378
Aconite, Monks-hood	379
Nitre, Nitrate of Potass	381
Symptoms of poisoning by Nitre - - - - -	—
Organic lesions - - - - -	382
Chemical processes for its detection - - - - -	—
Class IV. NARCOTIC POISONS	—
Opium, and its preparations	383
Symptoms of poisoning by Opium - - - - -	388
Physiological action of Opium - - - - -	390
Treatment in cases of poisoning by it - - - - -	391
Organic lesions - - - - -	393
Of the detection of Opium - - - - -	394
Black Henbane, <i>Hyoscyamus Niger</i>	395
Prussic Acid, Hydro-cyanic acid	396
The Laurel (<i>Prunus lauro-cerasus</i>) and its dis- tilled water	—
Bitter Almonds	—
Action of Hydro-cyanic acid as a poison	—
Physiological action of Prussic acid - - - - -	404
Antidotes - - - - -	406
Organic lesions - - - - -	407
Chemical processes for its detection - - - - -	408
Class V. NARCOTICO-ACRID POISONS	410
Deadly Night-shade, <i>Atropa Belladonna</i>	—
Symptoms of poisoning by it - - - - -	411
Physiological action - - - - -	412
Organic lesions - - - - -	—
Modes of detecting its presence - - - - -	413
Stramonium, Thorn Apple	—
Tobacco, <i>Nicotiana Tabacum</i>	414

Table of Contents.

	VOL. II.
Symptoms of poisoning by it	418
Its physiological action	419
Hemlock, Cicuta	420
Nux Vomica	421
Coeculus Indicus	423
Poisonous Mushrooms	425
Symptoms of poisoning by them	428
Organic lesions	433
Antidotes	434
Alcohol	—
Symptoms of poisoning by it	436
Its physiological action	437
Treatment of persons in a state of Inebriety	439
Animal poisons	440
Class VI. SEPTIC POISONS	—
The Bites of Venomous Animals.	—
Symptoms of the bite of a Viper	441
Physiological action of its poison	442
Putrescent Animal matter	443
Poisonous Fishes	449
Symptoms of Fish poisoning	451
Its origin	452
Aërial Poisons	456
Mercurial vapours	458
Sulphuretted hydrogen gas	462
Carburetted hydrogen gas	464
Chlorine; oxymuriatic acid gas	—
Sulphurous acid gas	465
Of Homicide, by Misadventure or Accident	466
A Synopsis of the objects of inquiry in cases of sudden and mysterious sickness and death	VOL. III.—1
Case I. The patient is living, and medical assistance is required	—
Case II. The patient is dead—the attendants can furnish only an imperfect account of his dissolution	2
Case III. The body is found dead—its history is unknown	—
1. Inspection of the dead body	—
2. Circumstances to be learnt by an examination of surrounding and collateral objects	3
3. Circumstances to be learnt by the interrogation of competent witnesses	—
4. Circumstances to be learnt by anatomical dissection	—
A Commentary on the preceding objects of Inquiry	6
Case I. The patient is living, and medical assistance is required	—
Previous state of the patient, with respect to bodily health and strength,	8

John Ayrtton Paris and J. S. M. Fonblanque

Table of Contents

[More information](#)*Table of Contents.*

xi

	VOL. III.
Age and occupation - - - -	—
Present symptoms of the patient - - - -	—
Whether any, and what remedies have been used; by whom recommended; and by whom administered? -	12
Appearance of the evacuations - - - -	13
Case II. The patient is dead—the attendants can furnish only an imperfect account of his dissolution	17
How soon is the deceased supposed to have died after the alleged cause of his dissolution? - - - -	17
Case III. The person is found dead, and the history of his dissolution is unknown	18
1. Circumstances to be learnt by inspection of the body.	19
Situation and attitude of the body - - - -	20
General appearance of the countenance, as to colour, vascular turgescence, or congestion, and morbid physiognomy - - - -	21
Whether any discharge issues from the mouth, nostrils, ears, or any other orifice? - - - -	—
Apparent age of the deceased - - - -	22
Description of person, as to bulk, stature, obesity, muscular powers, &c. - - - -	—
Conformation of the neck as to shortness, thickness, &c. - - - -	—
Probable period that has elapsed since the extinction of life - - - -	23
Whether any, and what marks, punctures, contusions, ecchymoses, dislocations, or other injuries, are to be observed about the face, neck, chest, or any other parts of the body; and how far their appearance and character demonstrate the nature of the operation, or instrument by which they were inflicted? - - - -	26
Whether the wounds observed on the body were necessarily of a mortal nature, or sufficiently severe to have caused immediate death? - - - -	30
Whether they were inflicted during life? - - - -	31
Whether they resulted from an act of suicide, or otherwise, or whether from accident or design? - - - -	32
Whether the cloaths of the deceased betray any odour of spirit, tobacco, sourness, or putridity? - - - -	34
Whether any articles have been broken or injured in the pockets? - - - -	—
Whether there is reason to believe that the deceased has been robbed? - - - -	—
If the deceased be a female, whether there be any marks or bruises that would indicate the commission of a rape? - - - -	35
2. Circumstances to be learnt by an examination of surrounding and collateral objects - - - -	36
Whether the spot in question be of a description to explain the cause of the deceased having been	

	VOL. III.
found there, or how far its retired situation excites the suspicion that the body had been conveyed thither for concealment, or some other purpose?	—
Whether any indications of a struggle having happened on the spot are visible on the ground, or herbage near the deceased, and whether any footsteps can be traced near the body?	37
Has there been a thunder storm?	38
Whether any, and what weapons, are lying near the body; and what is their position in relation to it?	—
If the body be found in the water, are there any, and what reasons for supposing that it was killed by other means, and subsequently thrown into the water?	39
If the deceased be found hanging by the neck, whether he was suspended during life, or hung up after death? whether it was an act of suicide or of murder?	42
If the deceased be found in an apartment, whether it be in a house of ill-fame?	44
3. Circumstances to be learnt by the interrogation of competent witnesses	45
4. Circumstances to be learnt by anatomical dissection	—
Dissection of the brain and its membranes	46
Dissection of the contents of the thorax	52
Examination of the abomen	60
Examination of the uterus and its appendages	67
Examination of the skeleton	73
Case of Thomas Bowerman	80
Abortion and Infanticide	84
Physiological Illustrations—Abortion	93
Infanticide	98
1. To ascertain whether the child was born alive?	100
A. Inspection of the body of the Infant	—
B. Phænomena displayed on the dissection of the internal parts	107
Cavities of the mouth, œsophagus, larynx, and trachea	107
Thoracic cavity	108
1. A fœtus may breathe as soon as its head is without the vagina, and immediately die	113
2. The lungs may have been artificially inflated	115
3. The lungs may float, in consequence of putrefaction	—
The cranial cavity	121
C. The character of the spot on which the body was found	122
II. Whether, supposing the child to have been alive, its death was the result of natural

APPENDIX. PART I.

Statute 9 <i>Hen.</i> 5	1
<i>Lordinance encontre les entremetteurs de fysyk et de Surgerie</i>	<i>3</i>
Statute 3 <i>Hen.</i> 8, c. 11. An act for the appointing of Physicians and Surgeons	—
Statute 5 <i>Hen.</i> 8, c. 6. An act concerning Surgeons to be discharged of Quests and other things	5
Statute 14 and 15 <i>Hen.</i> 8, c. 5. The privileges and authority of Physicians in London	7
The Charter of Incorporation	—
32 <i>Hen.</i> 8, c. 40. For Physicians and their pri- vilege	14
Statute 32 <i>Hen.</i> 8, c. 42. For Barbers, and Surgeons	17
34 and 35 <i>Hen.</i> 8, c. 8. A bill that no common Surgeons, may minister medicines notwithstand- ing the Statute	23
1 <i>Mary.</i> c. 9. An act touching the Corporation of the Physicians in London	25
6 and 7 <i>Will.</i> 3, c. 4. An act for exempting Apo- thecaries from serving the offices of constable, scavenger, and other parish and ward offices, and from serving upon juries	27
Continued by 1 <i>Ann.</i> st. 1, c. 11	—
Made perpetual by 9 <i>Geo.</i> 1, c. 8, § 1	29
10 <i>Geo.</i> 1, c. 20. An act for the better viewing, searching, and examining of all drugs, medicines, waters, oils, compositions, used, or to be used, for medicines, in all places where the same shall be exposed to sale, or kept for that purpose,

	VOL. III.
within the city of London and suburbs thereof, or within seven miles circuit of the said city .	30
[This act has not expired.]	
18 <i>Geo. 2</i> , c. 15. An act for making the Sur- geons of London, and the Barbers of London, two separate and distinct corporations	30
55 <i>Geo. 3</i> , c. 194. An act for better regulating the practice of Apothecaries throughout England and Wales	52
A Royal Charter granted to the Apothecaries of London, 30 Maii, 13 Jacobi	71
Royal Letter to the College of Physicians. <i>Charles R.</i>	92
To our trusty and well-beloved the Lord Mayor of our city of London for the time being, and to the Deputy Lieutenants and Commissioners of the Militia of London and Westminster that now are and hereafter shall be, and to all other Officers and Ministers whom it may concern. <i>Charles R.</i>	93
College Questions resolved by the Lord Chancellor and Judges in the 5th of King <i>James</i> , his reign, An. Dom. 1607,	94
Concerning punishment and correction against of- fenders	96
Cases	98
Dr. <i>Bonham's</i> case	—
Dr. <i>Groenvelt</i> , versus Dr. <i>Burwell</i> and others, Cen- sors of the College of Physicians	119
<i>William Rose's</i> case	127
Dr. <i>Stanger's</i> case	131
Habeas Corpus, and Censors Warrant for commit- ment of Empirics	145
Dr. <i>Burgess's</i> case	147
Dr. <i>Winterton's</i> Letter to the President	147
<i>Lilly's</i> Diploma. The license of Dr. <i>Sheldon</i> , Arch- bishop of Canterbury, granted to <i>William Lilly</i> , the Astrologer, to practice Physic, dated A. D. 1670	150
Order in Council, 26th July, 1809	151
