## CAMBRIDGE LIBRARY COLLECTION

*Books of enduring scholarly value*

### North American History

This series includes accounts of historical events and movements by eye-witnesses and contemporaries, as well as landmark studies that assembled significant source materials or developed new historiographical methods. The works range from the writings of early U.S. Presidents to journals of poor European settlers, from travellers' descriptions of bustling cities and vast landscapes to critiques of racial inequality and descriptions of Native American culture under threat of annihilation. The commercial, political and social aspirations and rivalries of the 'new world' are reflected in these fascinating eighteenth- and nineteenth-century publications.

### Narrative of the Canadian Red River Exploring Expedition of 1857

Born in Nottingham, Henry Youle Hind (1823–1908) moved to Canada in 1846. He joined the newly formed Canadian Institute in 1849 and later taught chemistry and geology at Trinity College in Toronto. In 1857–8, he made a range of observations during two expeditions to investigate underexplored areas of Canada and their agricultural and mineral potential to support future settlement. Illustrated with a number of plates based on photographs, this two-volume work first appeared in 1860. Intended for a broad readership, the narrative is regarded as a classic of nineteenth-century exploration literature, noted especially for its descriptive use of language and eye for detail. Volume 2 contains the concluding chapters on the 1858 expedition through parts of the Assiniboine, Saskatchewan and other valleys. Following the expedition narrative, Hind considers the lives and culture of the region's indigenous people before closing the volume with geological and climatic observations.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
