TABLES
 OF THE
ROUTE OF THE ESPERANCE*,
 DURING THE YEARS
1791, 1792, and 1793,
 FROM THE TIME OF
HER DEPARTURE FROM EUROPE
 TILL
HER ARRIVAL AT SOURABAYA.

IN these Tables will be found the Ship's place at noon; the Variation of the Compass, distinguished by *s. r.* when it was observed at sun-rise; by *s. s.* when it was observed at sun-set; and by *az.* when it is the result of an Azimuth; the degree of temperature by Reaumur's Thermometer †; and the height of the mercury in the Barometer at noon; the direction of the Winds, and the state of the Weather.

* In the Introduction to this Work, the Author has acknowledged his obligations to M. LE GRAND, one of the Officers of the *Espérance*, who, among other nautical information, furnished him with the following Tables of the Route of that Ship; but as the *Espérance* never parted company, or was scarcely ever out of sight of the *Recherche*, these may justly be considered as the Tables of the Route of both ships. The Translator is induced to make this observation, in order to account for the trifling differences that may occasionally occur between the latitudes and longitudes in the text, and those in the Tables.

† It was a Mercurial Thermometer. The scale of proportion between Reaumur's Thermometer and that of Fahrenheit is as two degrees and a quarter to one. Reaumur fixes his freezing point at 0. T.
