

CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

British and Irish History, Nineteenth Century

This series comprises contemporary or near-contemporary accounts of the political, economic and social history of the British Isles during the nineteenth century. It includes material on international diplomacy and trade, labour relations and the women's movement, developments in education and social welfare, religious emancipation, the justice system, and special events including the Great Exhibition of 1851.

London

The publisher and writer Charles Knight (1791–1873) was apprenticed to his printer father, but later became a journalist and then proprietor of various periodicals and magazines, many of which were driven by his concern for the education of the poor. As an author, he published a variety of works, including *The Old Printer and the Modern Press* (also reissued in this series). He claimed that this six-volume work on the architecture and history of London, published between 1841 and 1844, was neither a history nor a survey of London, but looked 'at the Present through the Past, and at the Past through the Present'. It relies on the skills of eminent artists to bring both the present and the past of London to life, and is arranged thematically rather than chronologically or geographically. This is a fascinating account of what was then the greatest city in the world.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
