CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

Archaeology

The discovery of material remains from the recent or the ancient past has always been a source of fascination, but the development of archaeology as an academic discipline which interpreted such finds is relatively recent. It was the work of Winckelmann at Pompeii in the 1760s which first revealed the potential of systematic excavation to scholars and the wider public. Pioneering figures of the nineteenth century such as Schliemann, Layard and Petrie transformed archaeology from a search for ancient artifacts, by means as crude as using gunpowder to break into a tomb, to a science which drew from a wide range of disciplines - ancient languages and literature, geology, chemistry, social history - to increase our understanding of human life and society in the remote past.

Ruins of Desert Cathay

In this two-volume work, published in 1912, the Hungarian-born archaeologist Marc Aurel Stein (1862–1943) describes his second expedition to the deserts of Chinese Turkestan in 1906–8. (His account of his first expedition, *Sand-Buried Ruins of Khotan* (1903), is also reissued in this series.) Stein intended this account to be read by non-specialists, and, like his previous book, it is highly illustrated and full of interesting details about his journey and the people he met en route, as well as of the important archaeological discoveries which still link his name with the civilisation of this remote and dangerous area. In Volume 2, Stein describes the discovery of the caves near the great trading post of Dunhuang which contained – walled up and almost perfectly preserved – manuscripts, sculptures, silk cloths, and the Diamond Sutra, the earliest complete and dated example of a printed book, hidden by Buddhist monks nine hundred years previously.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
