

CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

Naval and Military History

This series includes accounts of sea and land campaigns by eye-witnesses and contemporaries, as well as landmark studies of their social, political and economic impacts. The series focuses mainly on the period from the Renaissance to the end of the Victorian era. It includes major concentrations of material on the American and French revolutions, the British campaigns in South Asia, and nineteenth-century conflicts in Europe, such as the Peninsular and Crimean Wars. Although many of the accounts are semi-official narratives by senior officers and their relatives, the series also includes alternative viewpoints from dissenting leaders, servicemen in the lower ranks, and military wives and civilians caught up in the theatre of war.

An History of Marine Architecture

After completing his studies at Trinity College, Oxford, John Charnock (1756–1807) joined the Royal Navy as a volunteer. Though details of his career at sea are lacking, he is known to have embarked on assiduous research into historical and contemporary naval affairs, and he cultivated contacts with many serving officers. His six-volume *Biographia Navalis* (1794–8), flawed yet still useful, is also reissued in the Cambridge Library Collection. Published in three volumes from 1800 to 1802, the present work stands as the first serious study of naval architecture in Britain in particular, while also noting major developments in Europe and beyond. The volumes are illustrated throughout with numerous designs of vessels. Volume 3 (1802) covers changes across the entire eighteenth century, with some discussion of African and Asian examples. The work concludes with various experimental and practical considerations relating to effective shipbuilding and seafaring.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library and other partner libraries, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection brings back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.

An History of Marine Architecture

*Including an Enlarged and
Progressive View of the Nautical Regulations
and Naval History, Both Civil and Military,
of All Nations, Especially of Great Britain*
