<i>Foreword by George Willis</i>	<i>page vii</i>
1 On the role of totally disconnected groups in the structure of locally compact groups <i>Burger</i>	1
2 Locally compact groups as metric spaces <i>Tessera</i>	9
3 A short primer on profinite groups <i>Wilson</i>	17
4 Lectures on Lie groups over local fields <i>Glöckner</i>	37
5 Abstract quotients of profinite groups, after Nikolov and Segal <i>Klopsch</i>	73
6 Automorphism groups of trees: generalities and prescribed local actions <i>Garrido–Glasner–Tornier</i>	92
7 Simon Smith’s construction of an uncountable family of simple, totally disconnected, locally compact groups <i>Reid–Willis</i>	117
8 The Neretin groups <i>Garncarek–Lazarovich</i>	131
9 The scale function and tidy subgroups <i>Brehm–Gheysens–Le Boudec–Rollin</i>	145
10 Contraction groups and the scale <i>Wesolek</i>	161
11 The Bader–Shalom normal subgroup theorem <i>Gal</i>	171
12 Burger–Mozes’ simple lattices <i>Bartholdi</i>	179
13 A lecture on invariant random subgroups <i>Gelder</i>	186
14 L^2-Betti number of discrete and non-discrete groups <i>Sauer</i>	205
15 Minimal normal closed subgroups in compactly generated tdlc groups <i>Dumont–Gulko</i>	227
16 Elementary totally disconnected locally compact groups, after Wesolek <i>Cesa–Le Maître</i>	236

17 The structure lattice of a totally disconnected locally compact group	<i>Wilson</i>	258
18 The centraliser lattice	<i>Hume–Stulemeijer</i>	267
19 On the quasi-isometric classification of locally compact groups	<i>Cornulier</i>	275
20 Future directions in locally compact groups: a tentative problem list	<i>Caprace–Monod</i>	343
<i>Index</i>		357
