

Abstract Recursion and Intrinsic Complexity

This book presents and applies a framework for studying the complexity of algorithms. It is aimed at logicians, computer scientists, mathematicians and philosophers interested in the theory of computation and its foundations, and it is written at a level suitable for non-specialists.

Part I provides an accessible introduction to abstract recursion theory and its connection with computability and complexity. This part is suitable for use as a textbook for an advanced undergraduate or graduate course: all the necessary elementary facts from logic, recursion theory, arithmetic and algebra are included. Part II develops and applies an extension of the homomorphism method due jointly to the author and Lou van den Dries for deriving lower complexity bounds for problems in number theory and algebra which (provably or plausibly) restrict all elementary algorithms from specified primitives.

The book includes over 250 problems, from simple checks of the reader's understanding, to current open problems.

YIANNIS N. MOSCHOVAKIS is Professor Emeritus and Distinguished Research Professor of Mathematics at the University of California, Los Angeles, and Professor Emeritus at the University of Athens. Among his many professional commendations he is a Fellow of the AMS and a corresponding member of the Academy of Athens. He has received Guggenheim and Sloan Fellowships and has been an invited speaker at the International Congress of Mathematicians. Professor Moschovakis has worked primarily in the theory of recursion, descriptive set theory and the foundations of the theory of algorithms and computation.

LECTURE NOTES IN LOGIC

A Publication of The Association for Symbolic Logic

This series serves researchers, teachers, and students in the field of symbolic logic, broadly interpreted. The aim of the series is to bring publications to the logic community with the least possible delay and to provide rapid dissemination of the latest research. Scientific quality is the overriding criterion by which submissions are evaluated.

Editorial Board

Zoe Chatzidakis

DMA, Ecole Normale Supérieure, Paris

Peter Cholak, Managing Editor

Department of Mathematics, University of Notre Dame, Indiana

Leon Horsten

School of Arts, University of Bristol

Paul Larson

Department of Mathematics, Miami University

Paulo Oliva

School of Electronic Engineering and Computer Science, Queen Mary University of London

Martin Otto

Department of Mathematics, Technische Universität Darmstadt, Germany

Slawomir Solecki

Department of Mathematics, Cornell University, New York

CONTENTS

INTRODUCTION 1

CHAPTER 1. PRELIMINARIES 7

 1A. Standard notations..... 7

 Partial functions, 9. Monotone and continuous functionals, 10. Trees, 12. Problems, 14.

 1B. Continuous, call-by-value recursion 15

 The $\overline{\text{where}}$ -notation for mutual recursion, 17. Recursion rules, 17. Problems, 19.

 1C. Some basic algorithms..... 21

 The merge-sort algorithm, 21. The Euclidean algorithm, 23. The binary (Stein) algorithm, 24. Horner’s rule, 25. Problems, 25.

 1D. Partial structures 29

Φ -structures, 30. Substructures, 32. Diagrams, 32. Homomorphisms and embeddings, 33. Substructure generation, 33. Certificates, 34. Problems, 35.

 1E. Partial equational logic 36

 Syntax, 36. Semantics, 38. Explicit definability, 39. Problems, 42.

Part I. Abstract (first order) recursion

CHAPTER 2. RECURSIVE (MCCARTHY) PROGRAMS 49

 2A. Syntax and semantics..... 49

 A-recursive functions and functionals, 52. Problems, 55.

 2B. Simple fixed points and tail recursion 58

 Simple fixed points, 58. Pointed structures, 59. Tail recursion, 60. Tail recursive programs and functions, 61. Mutual tail recursion, 61. Relativization, 63. Problems, 64.

 2C. Iterators 69

 Reduction of iteration to tail recursion, 70. Explicit representation, 71. Turing computability and recursion, 71. About implementations (I), 73. Problems, 73.

 2D. The recursive machine 74

 Reduction of recursion to iteration, 78. Symbolic computation, 78. Problems, 80.

 2E. Finite nondeterminism 82

 Certificates and computations, 83. Fixed point semantics for nondeterministic programs, 84. Pratt’s nuclid algorithm, 85. Problems, 86.

| | |
|--|-----|
| 2F. Some standard models of computation | 90 |
| Finite register machines, 90. Straight line programs, 91. Random Access Machines (RAMs), 91. Problems, 93. | |
| 2G. Full vs. tail recursion (I) | 94 |
| Examples where $\mathbf{Tailrec}^0(\mathbf{A}) \subsetneq \mathbf{Rec}^0(\mathbf{A})$, 95. Examples where $\mathbf{Tailrec}^0(\mathbf{A})$ should be $\subsetneq \mathbf{Rec}^0(\mathbf{A})$, 97. Problems, 98. | |
| 2H. What is an algorithm? | 99 |
| About implementations (II), 100. Imperative vs. functional programming, 101. Proofs of correctness, 101. | |
| CHAPTER 3. COMPLEXITY THEORY FOR RECURSIVE PROGRAMS | 103 |
| 3A. The basic complexity measures | 103 |
| The tree-depth complexity $D_E^{\mathbf{A}}(M)$, 104. The sequential logical complexity $L^s(M)$ (time), 107. The parallel logical complexity $L^p(M)$, 108. The number-of-calls complexity $C^s(\Phi_0)(M)$, 110. The depth-of-calls complexity $C^p(\Phi_0)(M)$, 111. Problems, 112. | |
| 3B. Complexity inequalities | 115 |
| Recursive vs. explicit definability, 115. Tserunyan's inequalities, 117. Full vs. tail recursion (II), 124. Problems, 125. | |

Part II. Intrinsic complexity

| | |
|--|-----|
| CHAPTER 4. THE HOMOMORPHISM METHOD | 129 |
| 4A. Uniformity of algorithms | 129 |
| Processes, 130. Uniform processes, 132. Uniformity Thesis, 132. | |
| 4B. Examples and counterexamples | 133 |
| An example of a non-uniform process, 134. Problems, 135. | |
| 4C. Complexity measures on uniform processes | 136 |
| Substructure norms, 136. The time complexity on RAMs, 138. Problems, 138. | |
| 4D. Forcing $\Vdash^{\mathbf{A}}$ and certification $\Vdash_c^{\mathbf{A}}$ | 141 |
| The connection with Pratt certificates for primality, 143. Problems, 144. | |
| 4E. Intrinsic complexities of functions and relations | 144 |
| Homomorphism Test, 145. The output complexities, 146. Explicit (term) reduction and equivalence, 146. Problems, 147. Obstruction to calls $(\mathbf{A}, R, \vec{x}) = 0$, 147. Obstruction to depth $(\mathbf{A}, R, \vec{x}) = 0$, 148. | |
| 4F. The best uniform process | 149 |
| Optimality and weak optimality, 150. Problems, 151. | |
| 4G. Logical extensions | 152 |
| The lower bound for comparison sorting, 153. Embedding Test, 154. Substructure norms on logical extensions, 155. Problems, 157. | |
| 4H. Deterministic uniform processes | 158 |
| Problems, 158. | |
| CHAPTER 5. LOWER BOUNDS FROM PRESBURGER PRIMITIVES | 159 |
| 5A. Representing the numbers in $G_m(\mathbf{N}_d, \vec{a})$ | 159 |
| Problems, 162. | |
| 5B. Primality from \mathbf{Lin}_d | 163 |
| Using non-trivial number theory, 165. Problems, 166. | |

CONTENTS vii

| | |
|--|-----|
| 5C. Good examples: perfect square, square-free, etc. | 167 |
| Problems, 167. | |
| 5D. Stein's algorithm is weakly depth-optimal from \mathbf{Lin}_d | 168 |
| Problems, 170. | |
| CHAPTER 6. LOWER BOUNDS FROM DIVISION WITH REMAINDER | 171 |
| 6A. Unary relations from $\mathbf{Lin}_0[\div]$ | 171 |
| Problems, 177. | |
| 6B. Three results from number theory | 177 |
| Problems, 181. | |
| 6C. Coprimeness from $\mathbf{Lin}_0[\div]$ | 183 |
| Problems, 189. | |
| CHAPTER 7. LOWER BOUNDS FROM DIVISION AND MULTIPLICATION | 191 |
| 7A. Polynomials and their heights | 191 |
| 7B. Unary relations from $\mathbf{Lin}_0[\div, \cdot]$ | 196 |
| Problems, 202. | |
| CHAPTER 8. NON-UNIFORM COMPLEXITY IN \mathbb{N} | 203 |
| 8A. Non-uniform lower bounds from \mathbf{Lin}_d | 203 |
| Problems, 205. | |
| 8B. Non-uniform lower bounds from $\mathbf{Lin}_0[\div]$ | 205 |
| Problems, 207. | |
| CHAPTER 9. POLYNOMIAL NULLITY (0-TESTING) | 209 |
| 9A. Preliminaries and notation | 209 |
| The Substitution Lemma, 210. | |
| 9B. Generic $\{\cdot, \div\}$ -optimality of Horner's rule | 211 |
| Counting identity tests along with $\{\cdot, \div\}$, 216. | |
| 9C. Generic $\{+, -\}$ -optimality of Horner's rule | 218 |
| Counting identity tests along with $\{+, -\}$, 225. Counting everything, 226. Prob- | |
| lems, 226. | |
