Activity–activity diagrams
  applied to Bushveld IRUP, 135, 135
  applied to chromitite formation, 203
  applied to Stillwater replacement features, 131

Apatite
  compositional trends in layered intrusions, 77–84
  effect of alteration, 79
  examples, 78
  J-M Reef, 79
  Merensky Reef, 81
  Apatite-biotite geothermometer, 84–6, 85

Basistoppen sill, 129
Bjerkreim–Sokndal intrusion
  Sr isotopes, 207

Borinite
  proxy for Stillwater and Bushveld parent magma, 47, 91

Bubbles
  capillary entrapment, 230
  critical percolation density, 66
  growth by fluidization, 60
  growth by matrix fracture, 62
  growth by matrix deformation, 62
  growth by pore liquid displacement, 60
  growth mechanisms, 59–63, 60–1, 63
  heterogeneous nucleation, 54, 57
  homogeneous nucleation, 54
  homogeneous nucleation rate, 57
  in sediments, 64
  movement in a mush, 64–6
  nucleation, 54–9, 55, 58
  supersaturation pressure, 56
  transition to continuous fluid, 66

Bushveld Complex
  apatite composition, 78, 80–1
  average PGE concentrations, 7
  Cl isotopes, 100

C country fluids, 48
diатreme, 123–6, 123–6
  sedimentary analog, 124–5
general geology, 19–24, 19–24
  IRUP, 118, 118
isotopic disequilibrium, 212, 214–15
Li isotopes, 211
Merensky Reef, 22, 151
metamorphic aureole, 48
PGE in rocks below PGE reefs, 7, 7, 228
PGE pipe metasomatic model, 133, 134
PGE pipes, 22, 119–22, 120, 122–3
Platreef, 22, 73, 73, 86, 211, 228
portholes, 136, 136
radiogenic isotopes, 210–11
silicate liquid inclusions, 104
stable isotopes, 211, 213
stratigraphy, 21
UG2 chromitite, 22, 24, 184

C isotopes. See Stable isotopes
Cadgerina dike, 83, 171
apatite composition, 80
Calcite. See Carbonate minerals
Calcite-H$_2$O-NaCl system, 43
Carbonate minerals, 42, 75, 106–7, 132, 201
Chlorite. See Halogens
Chromatographic models, 162–6
  numerical model results, 164–5
Chromatographic theory, 156–62, 158
  and ore metatal offsets, 156
  development of compositional zones, 160
Chromite
  evidence for a secondary origin, 154
  PGE concentrations, 193
  PGE in layered intrusion chromite, 195–7
  PGE in volcanic chromite, 191–5
  PGE partitioning into, 191
  PGM inclusions, 191
Chromitite evidence for fluids, 200
hydromagmatic models for PGE-sulfide associations, 204–6
origin by chromite slurry, 199
origin by incongruent flux melting, 200
origin by incongruent melting, 200
origin by magma hydration, 199
origin by magma mixing, 197
origin by metasomatic reactions, 200–1
origin by pressure changes, 198
thin seam examples, 197
Chromitite formation models, 197–201
hydromagmatic models, 199
metasomatic models, 202–3
orthomagmatic models, 198
Cl. See Halogens
Cl isotopes. See Stable isotopes
CO₂ concentration in magmas, 35
solubility, 35, 35
Compaction, 17
and Great Dyke-type PGE deposits, 187
and trapped liquid shift effect, 182–7
characteristic variable, 178
effect of density change, 180
high porosity zones as mineralization traps, 187
numerical model example, 179
theory, 176–82
Constitutional zone refining, 144–8, 145–6
and the Platinitova Reef, 148
Stillwater example, 145, 147
Country fluids
Bushveld Complex, 125–6
from basal aureoles, 47–9, 48
Critical point behaviour
in H₂O system, 45
in H₂O-rock system, 45, 45
Crystal accumulation mechanisms, 11–15, 11–15
crystal settling, 11
crystal slurries, 14
in situ crystallization, 13
magma plumes, 13
Crystal accumulation mechanisms, 11–15, 11–15
Crystal aging, 15–17
Sn-Pb system example, 16
Crystal coarsening. See Crystal aging
Crystal settling, 11
Crystal slurries, 14
anorthosites formed from, 137
Crystal slurries
lack of mineral lineation, 217
Cumulate terminology, 10–11
problems with, 10–11
