<b>1 Introduction and Examples: Physical Models</b>	
1.1 A Brief General Introduction	1
1.2 Physical and Other Models	3
1.2.1 Population growth model	3
1.2.2 An atomic waste disposal problem	6
1.2.3 Mechanical vibration model	8
1.2.4 Electrical circuit	9
1.2.5 Satellite problem	10
1.2.6 Flight trajectory problem	13
1.2.7 Other examples	14
1.3 Exercises	19
1.4 Notes	21
<b>2 Preliminaries</b>	
2.1 Introduction	22
2.2 Preliminaries from Real Analysis	22
2.2.1 Convergence and uniform convergence	22
2.3 Fixed Point Theorem	34
2.4 Some Topics in Linear Algebra	38
2.4.1 Euclidean space $\mathbb{R}^n$	41
2.4.2 Points versus vectors	42
2.4.3 Linear operators	42

## viii Contents

2.5	Matrix Exponential $e^{\mathbf{A}}$ and its Properties	43
2.5.1	Diagonalizability and block diagonalizability	46
2.5.2	Spectral analysis of $\mathbf{A}$	48
2.5.3	Computation of $e^{\mathbf{J}}$ for a Jordan block $\mathbf{J}$	51
2.6	Linear Dependence and Independence of Functions	53
2.7	Exercises	54
2.8	Notes	55
<b>3</b>	<b>First and Second Order Linear Equations</b>	
3.1	First Order Equations	56
3.1.1	Initial and boundary value problems	57
3.1.2	Concept of a solution	59
3.1.3	First order linear equations	60
3.1.4	Variable separable equations	65
3.2	Exact Differential Equations	66
3.3	Second Order Linear Equations	72
3.3.1	Homogeneous SLDE (HSLDE)	74
3.3.2	Linear equation with constant coefficients	77
3.3.3	Non-homogeneous equation	79
3.3.4	Green's functions	88
3.4	Partial Differential Equations and ODE	89
3.5	Exercises	93
3.6	Notes	97
<b>4</b>	<b>General Theory of Initial Value Problems</b>	
4.1	Introduction	99
4.1.1	Well-posed problems	99
4.1.2	Examples	100
4.2	Sufficient Condition for Uniqueness of Solution	103
4.2.1	A basic lemma	103
4.2.2	Uniqueness theorem	106
4.3	Sufficient Condition for Existence of Solution	107
4.3.1	Cauchy–Peano existence theorem	112
4.3.2	Existence and uniqueness by fixed point theorem	116
4.4	Continuous Dependence of the Solution on Initial Data and Dynamics	119

4.5	Continuation of a Solution into Larger Intervals and Maximal Interval of Existence	120
4.5.1	Continuation of the solution outside the interval $ t - t_0  \leq h$	121
4.5.2	Maximal interval of existence	123
4.6	Existence and Uniqueness of a System of Equations	125
4.6.1	Existence and uniqueness results for systems	127
4.7	Exercises	130
4.8	Notes	133
<b>5</b>	<b>Linear Systems and Qualitative Analysis</b>	
5.1	General $n^{\text{th}}$ Order Equations and Linear Systems	134
5.2	Autonomous Homogeneous Systems	136
5.2.1	Computation of $e^{t\mathbf{A}}$ in special cases	137
5.3	Two-dimensional Systems	139
5.3.1	Computation of $e^{\mathbf{B}j}$ and $e^{t\mathbf{B}j}$	140
5.4	Stability Analysis	143
5.4.1	Phase plane and phase portrait	143
5.4.2	Dynamical system, flow, vector fields	145
5.4.3	Equilibrium points and stability	147
5.5	Higher Dimensional Systems	155
5.6	Invariant Subspaces under the Flow $e^{t\mathbf{A}}$	165
5.7	Non-homogeneous, Autonomous Systems	167
5.7.1	Solution to non-homogeneous systems (variation of parameters)	168
5.7.2	Non-autonomous systems	169
5.8	Exercises	175
5.9	Notes	179
<b>6</b>	<b>Series Solutions: Frobenius Theory</b>	
6.1	Introduction	180
6.2	Real Analytic Functions	180
6.3	Equations with Analytic Coefficients	183
6.4	Regular Singular Points	189
6.4.1	Equations with regular singular points	190
6.5	Exercises	198
6.6	Notes	200

x Contents

<b>7</b>	<b>Regular Sturm–Liouville Theory</b>	
7.1	Introduction	201
7.2	Basic Result and Orthogonality	203
7.3	Oscillation Results	208
	7.3.1 Comparison theorems	211
	7.3.2 Location of zeros	218
7.4	Existence of Eigenfunctions	219
7.5	Exercises	220
7.6	Notes	222
<b>8</b>	<b>Qualitative Theory</b>	
8.1	Introduction	223
8.2	General Definitions and Results	224
	8.2.1 Examples	228
8.3	Liapunov Stability, Liapunov Function	229
	8.3.1 Linearization	230
	8.3.2 Examples	233
8.4	Liapunov Function	238
8.5	Invariant Subspaces and Manifolds	245
8.6	Phase Plane Analysis	248
	8.6.1 Examples	248
8.7	Periodic Orbits	253
8.8	Exercises	264
8.9	Notes	266
<b>9</b>	<b>Two Point Boundary Value Problems</b>	
9.1	Introduction	267
9.2	Linear Problems	269
	9.2.1 BVP for linear systems	274
	9.2.2 Examples	275
9.3	General Second Order Equations	276
	9.3.1 Examples	280
9.4	Exercises	284
9.5	Notes	284
<b>10</b>	<b>First Order Partial Differential Equations: Method of Characteristics</b>	
10.1	Linear Equations	286

10.2	Quasi-linear Equations	290
10.3	General First Order Equation in Two Variables	295
10.4	Hamilton–Jacobi Equation	302
10.5	Exercises	304
10.6	Notes	306
<b>Appendix A Poincarè–Bendixon and Leinard’s Theorems</b>		
A.1	Introduction	307
A.2	Poincarè–Bendixon Theorems	310
	A.2.1 Intersection with transversals	310
A.3	Leinard’s Theorem	316
	Bibliography	321
	Index	325
