|--|-----------|
| Preface | ix |
| 1 Introduction | 1 |
| 1.1 What is counting? | 1 |
| 1.2 About how many? | 7 |
| 1.3 How hard is it? | 7 |
| 1.4 Exercises | 8 |
| 2 Formal power series | 12 |
| 2.1 Fibonacci numbers | 12 |
| 2.2 Formal power series | 16 |
| 2.3 Variation and generalisation | 20 |
| 2.4 Relation with analysis | 21 |
| 2.5 Exponential, logarithmic and binomial series | 23 |
| 2.6 Exercises | 25 |
| 3 Subsets, partitions and permutations | 29 |
| 3.1 Subsets | 29 |
| 3.2 Partitions | 37 |
| 3.3 Permutations | 42 |
| 3.4 Lah numbers | 47 |
| 3.5 More on formal power series | 48 |
| 3.6 Unimodality | 50 |
| 3.7 Appendix: Exponential and logarithm | 54 |
| 3.8 Exercises | 56 |

| | | |
|----------|--|------------|
| 4 | Recurrence relations | 64 |
| 4.1 | Linear recurrences with constant coefficients | 65 |
| 4.2 | Linear recurrence relations with polynomial coefficients | 77 |
| 4.3 | Some non-linear recurrence relations | 83 |
| 4.4 | Appendix: Euler's Pentagonal Numbers Theorem | 85 |
| 4.5 | Appendix: Some Catalan objects | 89 |
| 4.6 | Appendix: The RSK algorithm | 97 |
| 4.7 | Appendix: Some inverse semigroups | 99 |
| 4.8 | Exercises | 101 |
| 5 | The permanent | 106 |
| 5.1 | Permanents and SDRs | 106 |
| 5.2 | Hall's Theorem | 107 |
| 5.3 | The van der Waerden conjecture | 108 |
| 5.4 | Latin squares | 110 |
| 5.5 | Latin rectangles | 113 |
| 5.6 | Exercises | 113 |
| 6 | q-analogues | 114 |
| 6.1 | Motivation | 114 |
| 6.2 | q -integers | 116 |
| 6.3 | The q -Binomial Theorem | 118 |
| 6.4 | Elementary symmetric functions | 119 |
| 6.5 | Partitions and permutations | 121 |
| 6.6 | Irreducible polynomials | 122 |
| 6.7 | Quantum calculus | 124 |
| 6.8 | Exercises | 125 |
| 7 | Group actions and the cycle index | 131 |
| 7.1 | Group actions | 131 |
| 7.2 | The Orbit-counting Lemma | 133 |
| 7.3 | The cycle index | 135 |
| 7.4 | Labelled and unlabelled | 137 |
| 7.5 | Exercises | 139 |
| 8 | Möbius inversion | 141 |
| 8.1 | The Principle of Inclusion and Exclusion | 141 |
| 8.2 | Partially ordered sets | 144 |
| 8.3 | The incidence algebra of a poset | 146 |
| 8.4 | Some Möbius functions | 147 |
| 8.5 | Classical Möbius inversion | 149 |
| 8.6 | The general linear group | 151 |
| 8.7 | Exercises | 152 |

Contents

vii

| | |
|--|------------|
| 9 The Tutte polynomial | 156 |
| 9.1 The chromatic polynomial | 156 |
| 9.2 The Tutte polynomial | 159 |
| 9.3 Orbit counting and the Tutte polynomial | 161 |
| 9.4 The Matrix-Tree Theorem | 166 |
| 9.5 Exercises | 168 |
| 10 Species | 170 |
| 10.1 Cayley's Theorem | 170 |
| 10.2 Species and counting | 171 |
| 10.3 Examples of species | 173 |
| 10.4 Operations on species | 174 |
| 10.5 Cayley's Theorem revisited | 176 |
| 10.6 What is a species? | 177 |
| 10.7 Oligomorphic permutation groups | 178 |
| 10.8 Weights | 181 |
| 10.9 Exercises | 183 |
| 11 Analytic methods: a first look | 187 |
| 11.1 The language of asymptotics | 187 |
| 11.2 Stirling's formula | 188 |
| 11.3 Complex analysis | 190 |
| 11.4 Subadditive and submultiplicative functions | 192 |
| 11.5 Exercises | 194 |
| 12 Further topics | 195 |
| 12.1 Lagrange inversion | 195 |
| 12.2 Bernoulli numbers | 200 |
| 12.3 The Euler–Maclaurin sum formula | 204 |
| 12.4 Poly-Bernoulli numbers | 205 |
| 12.5 Hayman's Theorem | 207 |
| 12.6 Theorems of Meir and Moon and of Bender | 208 |
| 12.7 Exercises | 210 |
| 13 Bibliography and further directions | 212 |
| 13.1 The On-line Encyclopedia of Integer Sequences | 212 |
| 13.2 Books on combinatorial enumeration | 213 |
| 13.3 Papers cited in the text | 215 |
| Index | 217 |
