<i>List of Contributors</i>	page viii		
<i>Preface</i>	xi		
Part I Introduction			
1 Objectives of Geomagnetic and Aeronomy Studies	3		
<i>David Kerridge</i>			
2 Why Study the Geomagnetic Field?	7		
2.1 Understanding the Internal Structure of Our Planet	7		
<i>Steven Constable</i>			
2.2 Tectonic History of the Earth	8		
<i>Rob van der Voo and Trond H. Torsvik</i>			
2.3 Paleomagnetic Dating	13		
<i>Harald Böhm</i>			
2.4 Surveying and Exploration	17		
<i>Jacques Zlotnicki, Malcolm J. S. Johnston, Yoichi Sasai and Jean-Louis Le Mouél</i>			
2.5 Geospace Environment: State of the Magnetosphere and Ionosphere	23		
<i>Mangalathayil Ali Abdu</i>			
2.6 Space Weather Hazard	26		
<i>David Boteler</i>			
2.7 Geomagnetic Field and Biosphere	27		
<i>Jean-Pierre Valet</i>			
3 Major Scientific Contributions of the International Association of Geomagnetism and Aeronomy (IAGA) during the Past 100 Years	30		
<i>Edward W. Cliver and Eduard Petrovský</i>			
3.1 Geomagnetism and Aeronomy circa 1919	30		
3.2 IAGA's Institutional Contributions, 1919–2019	31		
Part II Geomagnetic Field: Sources and Observations			
4 Geomagnetic Field Sources: From Earth's Core to the Sun	41		
<i>Daniel N. Baker</i>			
4.1 Ring Current	43		
4.2 Field-Aligned (or Birkeland) Currents	43		
4.3 Magnetotail Currents	44		
4.4 Magnetopause Currents	45		
4.5 Magnetospheric Dynamics	46		
4.6 Summary	46		
5 Can Paleomagnetism Distinguish Dynamo Regimes?	48		
<i>Stuart A. Gilder and Florian Lhuillier</i>			
5.1 Background	48		
5.2 Distinguishing Numerical Dynamos with Simulated Paleomagnetic Data	49		
5.3 Testing against Real Data	50		
5.4 Conclusions	51		
6 Geomagnetic and Electromagnetic Observations at Ground Level	54		
6.1 Geomagnetic Measurements	54		
<i>Arnaud Chulliat</i>			
6.2 Electromagnetic and Magnetotelluric Measurements	68		
<i>Ute Weckmann and Oliver Ritter</i>			
6.3 Solar Cycle Variations in Differential Instrumental Responses from Ground-Based Geomagnetic Records	71		
<i>Stuart A. Gilder, Michael R. Wack, Elena A. Kronberg and Ameya Prabhu</i>			
7 Modelling Internal and External Geomagnetic Fields Using Satellite Data	84		
<i>Ingo Wardinski and Erwan Thébaud</i>			
7.1 Introduction	84		
7.2 Theoretical Background	85		
7.3 Derivation of Magnetic Field Models	89		
7.4 The Need for Prior Information	90		
7.5 Model Diagnostics	91		
7.6 Concluding Remarks	95		
8 New Insights in Far-Space Measurements: Large-Scale Structures and Processes in the Solar Wind and Terrestrial Magnetosphere	98		
<i>Aurélie Marchaudon</i>			
8.1 Introduction	98		
8.2 Missions and Instrumentation	99		
8.3 Solar Wind	100		
8.4 Magnetosheath and Magnetosphere	104		
8.5 Conclusion	108		
Part III Spatial and Temporal Variations of the Geomagnetic Field			
9 Spatial and Temporal Changes of the Geomagnetic Field: Insights from Forward and Inverse Core Field Models	115		
<i>Nicolas Gillet</i>			
9.1 Introduction	115		
9.2 Geomagnetic Field Modelling	115		
9.3 Dynamical Models of Earth's Core Dynamics	122		

vi	<i>Contents</i>
9.4 The Advent of Geomagnetic Data Assimilation	126
9.5 Concluding Remarks	129
10 The Global Lithospheric Magnetic Field: World Magnetic Anomaly Maps and Models <i>Vincent Lesur and Erwan Thébault</i>	133
10.1 Introduction	133
10.2 Building the WDMAM	134
10.3 Versions of the WDMAM	135
10.4 Models of the Earth Magnetic Field Generated in the Lithosphere	136
10.5 On the Interpretation of Global Anomaly Data	137
10.6 Conclusion	139
11 The Ionospheric Field	141
11.1 Ionosphere–Thermosphere Coupling <i>Robert J. Strangeway</i>	141
11.2 Equatorial Ionization Anomaly <i>Balan Nanan</i>	146
11.3 High-Latitude and Polar Cap Ionosphere <i>C. Robert Clauer</i>	150
11.4 Auroral Processes <i>Yusuke Ebihara</i>	152
12 The Magnetosphere	160
12.1 Magnetosphere Energy Input <i>Stephen A. Fuselier</i>	160
12.2 Magnetopause Boundary Layer <i>Stephen A. Fuselier</i>	161
12.3 Substorms and Steady Magnetospheric Convection <i>Robert L. McPherron</i>	163
12.4 Radiation Belts and Ring Current <i>Daniel N. Baker</i>	167
12.5 Recent Advances in Satellite Missions <i>Craig A. Kletzing</i>	170
12.6 Plasma Wave Interactions <i>Craig A. Kletzing</i>	173
12.7 Plasmasphere and Plasmapause <i>Viviane Pierrard</i>	175
13 Temporal Field Variations	181
13.1 From Reversals to Very-Low-Frequency Waves <i>Catherine Constable</i>	181
13.2 Ultra-Low Frequency Wave Dynamics <i>Ian R. Mann</i>	185
13.3 Ultra-Low Frequency Wave–Particle Interactions in the Radiation Belts <i>Ian R. Mann, Louis G. Ozeke, Alex Degeling, Kyle R. Murphy and Robert Rankin</i>	190
13.4 Observations, Diagnostics and Applications <i>Colin L. Waters</i>	195
Part IV Space Weather	
14 Physical Processes of Space Weather	209
14.1 The Sun–Earth Connection <i>Bogdan Hnat</i>	209
14.2 Solar Disturbances <i>Bogdan Hnat</i>	214
14.3 Magnetic Storms <i>Robert L. McPherron</i>	217
15 Space Weather Effects in the Ionosphere, in the Thermosphere and at Earth’s Surface	229
15.1 Magnetosphere–Ionosphere Coupling and Ionospheric Dynamics during Storms and Substorms: Role of Alfvén Waves <i>Ian R. Mann, Ivan P. Pakhotin, I. Jonathan Rae, Kyle R. Murphy, Louis G. Ozeke, David J. Knudsen, Andy Kale and David K. Milling</i>	229
15.2 Thermospheric Density Response to Geomagnetic Storms and Substorms: Heating and Expansion, Composition Changes and Gravity Waves <i>Hermann Lühr, Huixin Liu, Ruosi Liu and Patricia Ritter</i>	235
15.3 Earth Surface Response to Geomagnetic Storms and Substorms: Geomagnetic and Goelectric Disturbances <i>Ari Viljanen</i>	242
16 Technological Impacts of Space Weather <i>Michael Hapgood</i>	251
16.1 Geomagnetically Induced Currents	251
16.2 Disruption of Satellite Navigation	254
16.3 Radiation Effects on Satellites	257
16.4 Atmospheric Radiation Effects	259
16.5 Impact on Technological Society	261
Part V Magnetic Fields beyond the Earth and beyond Today	
17 Magnetic Field Evolution in Terrestrial Bodies from Planetesimals to Exoplanets <i>Doris Breuer</i>	267
17.1 Introduction	267
17.2 Mechanism for Dynamo Generation in Iron-Rich Cores	268
17.3 Magnetic Field Evolution of Rocky Bodies	270
17.4 Summary and Conclusion	279
18 Solar Variability: Causes, Current Understanding, Prospects for the Future <i>André Balogh</i>	286
18.1 Total Solar Irradiance (TSI) as a Function of the Solar Activity Cycle	286

Contents

vii

18.2 Predictability and Forecasting: Tests of Understanding Solar Phenomena	286	19 Long- and Short-Term Geomagnetic Prediction	312
18.3 Sunspots and the Solar Activity Cycle	287	<i>Weijia Kuang, Andrew Tangborn, Terence Sabaka and Robert Tyler</i>	
18.4 Activity Indicators and Forecasting the Solar Cycles	288	19.1 Introduction	312
18.5 Hemispheric Asymmetries of Solar Activity	292	19.2 Source Separation in Geomagnetic Field Modelling	313
18.6 Magnetic Flux Emergence, Solar Flares and Coronal Mass Ejections	293	19.3 Predictability of Tidal Phenomena in the Geomagnetic Record	314
18.7 The Origin and Dynamic Evolution of the Interplanetary Medium	296	19.4 Mathematics of Geomagnetic Data Assimilation	317
18.8 The Solar Origin of the Heliospheric Magnetic Field	301	19.5 Geomagnetic Secular Variation Prediction	319
18.9 The Open Magnetic Flux of the Sun in the Heliosphere	302	19.6 Concluding Remarks	323
18.10 Current Status and Future Prospects	304	<i>Index</i>	327
		<i>Colour plate section between pages 178 and 179</i>
