A comprehensive introduction to both urban and geographical economics: the two dominant approaches used to explain the distribution of economic activity across space. This fully revised and up-to-date third edition gives a full account of the ever-expanding body of knowledge and insights on urban and geographical economics, with an increased emphasis on analytical concepts and empirical methods, reflecting developments in the literature since the last edition. The authors provide both state-of-the-art theories and empirics, introducing new data, methods and models for this edition, including a whole chapter dedicated to measurement issues and empirical methods. Written in a style that is accessible to students who are new to the field, this textbook also includes more advanced concepts that will interest experienced researchers. Unrivalled in its scope and depth, this title is perfect for readers seeking to understand the uneven spatial distribution of economic activity between and within countries.

Steven Brakman is Professor of International Economics at the Faculty of Economics and Business at the Rijksuniversiteit Groningen. He is a research fellow of the CESifo Institute in Munich, and co-editor of the Journal of Regional Science. He is academic partner of the Netherlands Bureau for Economic Policy Analysis, and member of the programme committee of Statistics Netherlands.

Harry Garretsen is Professor of International Economics and Business at the Rijksuniversiteit Groningen, and a visiting fellow at the University of Cambridge. Garretsen has published widely in books and leading international journals on urban, geographical, international economics and also on economics and leadership. He has also been active in giving policy advice on these topics. His editorial board activities include the Journal of Economic Geography, Journal of Regional Science, Cambridge Journal of the Regions, Economy and Society, and Leadership Quarterly.

Charles van Marrewijk is Professor of Economics and Head of Research at Universiteit Utrecht School of Economics, The Netherlands. He has published widely for leading international journals and publishers on spatial economics (including international, urban, regional, and geographical economics) and development economics (including economic growth, agglomeration, and globalization).
An Introduction to Geographical and Urban Economics
A Spiky World

## Part I  Empirical Foundations

1  A Spiky World 3
   What came before ... (the 2001 and 2009 editions of our book) 3
   1.1 Introduction 5
   1.2 Many People 6
   1.3 Global Regions 7
   1.4 Countries 10
   1.5 Within-Country Variation 14
      1.5.1 Variation Within the USA 15
      1.5.2 Variation Within Texas 16
      1.5.3 Urban Locations in the USA 17
   1.6 Urban Development in History 18
   1.7 Recent Urban Development 20
   1.8 Urbanization and Income Per Capita 22
   1.9 Two Regularities 24
      1.9.1 Distribution Pattern (Zipf’s Law) 24
      1.9.2 Interaction (Gravity Equation) 25
   1.10 Overview of the Book 27
      Exercises 29

2  Geo-Human Interaction 31
   2.1 Introduction 31
   2.2 Simple Geography 33
   2.3 The Agricultural Revolution 37
   2.4 North–South or East–West? 42
   2.5 Bio-geography and Income 44
   2.6 Institutions 46
   2.7 Development by 1500 47
## Contents

2.8 Reversal of Fortune 49  
2.9 Selection Effects 52  
2.10 Migration Flows Since 1500 54  
2.11 Ancestry 58  
2.12 Conclusions 60  
Exercises 62  

3 Empirical Methods 66  
3.1 Introduction 66  
3.2 Inequality Measures 68  
3.2.1 Desirable Properties of Inequality Measures 68  
3.2.2 The Gini Coefficient 69  
3.2.3 Generalized Entropy Measures 71  
3.3 Economic Concentration Measures 74  
3.3.1 Desirable Properties of Concentration Measures 75  
3.3.2 Ellison-Glaeser Index 78  
3.3.3 Duranton-Overman Density 80  
3.4 An Experiment 85  
3.5 Spatial Concentration and Productivity 91  
3.5.1 Omitted Variables and Fixed Effects 96  
3.5.2 Cause and Effect 98  
3.5.3 Natural Experiments 100  
3.5.4 Regression Discontinuity Design (RDD) 104  
3.5.5 Spatial Connections 107  
3.6 Conclusions 108  
Technical Note 109  
Exercises 110  

Part II Urban Economics 111  

4 Space Within Cities 113  
4.1 Introduction 113  
4.2 American ZIP Codes 114  
4.3 The Von Thünen Model 116  
4.4 Choosing Location – the Rent Curve 118  
4.5 The Rent Curve in New York City 122  
4.6 Choosing Transport Method – Steepness of Rent Curve 125  
4.7 Choosing Land Area – Population Density 127  
4.8 Population Density in Indianapolis 131  
4.9 Choosing Housing – Building Height 136  
4.10 Other Issues 140  
4.10.1 Heterogeneity 140

Part III Geographical Economics 217

7 The Core Model 219
7.1 Introduction 219
7.2 Origin of the Core Model 221
7.3 Demand in the Core Model 222
Contents

7.3.1 Spending on Manufacturing Varieties 223
7.3.2 Demand Effects: Income, Price, Elasticity \( \varepsilon \), and Price Index 225
7.4 Supply in the Core Model 227
7.4.1 Price Setting and Zero Profits 228
7.5 Transport Costs: Icebergs in Geography 231
7.5.1 Introducing Different Locations 233
7.6 Equilibrium in the Core Model 235
7.6.1 Short-run Equilibrium 235
7.6.2 Long-run Equilibrium 238
7.7 A First Look at Dynamics 241
7.7.1 Simulations 245
7.7.2 Transport Costs and Stability 247
7.8 Analytical Results: The Tomahawk Diagram 248
7.8.1 Sustain Point 249
7.8.2 Break Point 250
7.9 Conclusions 255
Technical Notes 258
Exercises 263

8 Extensions of the Core Model 266
8.1 Introduction 266
8.2 Intermediate Inputs Without Inter-Regional Labour Mobility 268
8.2.1 Demand 269
8.2.2 Manufacturing Supply 269
8.2.3 Supply of Food 270
8.2.4 Equilibrium with Transport Costs 271
8.2.5 Intermediate Good Simulations 272
8.3 The Bell-Shaped Curve and a Generalized Model 276
8.3.1 Decreasing Returns 276
8.3.2 Generalized Model 279
8.4 The Solvable Model: Two Factors of Production for Manufactures 280
8.5 Many Regions 286
8.5.1 Many Locations in Neutral Space 286
8.5.2 Preferred Frequency 289
8.6 Congestion as an Additional Spreading Force 290
8.6.1 The Modelling of Congestion 290
8.6.2 The Two-City Model and Congestion 292
8.6.3 Many Locations and Congestion 294
8.7 Empirics of Urban Power Laws 297
8.7.1 The World and Continents 298

## Part IV Development and Policy

### 10 Geography and Development

10.1 Introduction
10.2 Income, Economic Growth and Stylized Facts 1 & 2
10.3 Income Inequality and Stylized Facts 3 & 4
10.4 Explaining the Four Facts: Endogenous Growth and Spatial Economics
  10.4.1 Endogenous Growth and Dealing with Facts 1 & 2
  10.4.2 Geographical Economics and Dealing with Facts 3 & 4
10.5 Geography, Growth, and the Four Facts: A Synthesis Model
  10.5.1 Main Ingredients of the Synthesis Model
  10.5.2 Agglomeration and Growth in the Baldwin-Forslid Model
  10.5.3 Discussion of the Main Implications of the Baldwin-Forslid Model
10.6 Deep Determinants of Development: The Geography of Institutions
  10.6.1 Institutions Trump Geography?
  10.6.2 The Geography of Institutions
10.7 What Happens to China If Its Internal Labour Mobility Rises?
10.8 Conclusions

### Technical Note

### 11 Policy Implications

11.1 Introduction
11.2 The Temptation of Regional Policy: A Closer Look at Clusters
11.3 The Rationale for Regional Policy: Motivation and Measurement
11.4 Regional Policy: Think Twice!
11.5 Policy Making in Urban and Geographical Economics Models
  11.5.1 Policy and Spatial Equilibrium for Both Urban and Geographical Economics
  11.5.2 Stylized Policy Implications in the World of the Tomahawk
11.6 Building a Bridge in Geographical Economics
  11.6.1 The Pancake Economy
  11.6.2 Bridges and the Equilibrium Spatial Distribution
  11.6.3 The Hypothetical Bridge Versus Real Bridges
11.7 Welfare Implications
  11.7.1 Introducing Welfare Analysis
  11.7.2 Welfare Implications of a Bridge in the Pancake Economy

11.6  Welfare
The purpose of our book is to offer an introduction to urban and geographical economics, the two dominant approaches in mainstream economics to explain the distribution of economic activity across space. The fact that we offer an ‘introduction’ does not mean that we avoid models or shy away from more advanced or difficult concepts; it indicates that we have attempted to write a book that is both accessible to readers and students who are new to the field but also of interest to fellow researchers. This book builds upon the first and second editions of 2001 and 2009, respectively. At the same time, this book is rather different from its two predecessors. Apart from an ever expanding body of knowledge and insights on urban and geographical economics that needs to be covered, the present version of the book is also different because it puts much greater emphasis on analytical concepts and empirical methods, which reflects the developments in the literature since the time of writing the 2009 edition. In addition, the new book pays far more attention to urban economics to the extent that we have decided to incorporate ‘urban economics’ in the title of our book.

To help the reader in learning and understanding the basics of modern urban and geographical economics, each chapter offers a set of questions as well as technical notes and special interest boxes to guide the reader through the material. In addition, there is a website that goes along with the book where answers to the questions are given, additional material is discussed, and where a simulation of the core model of geographical economics can help the reader to enhance her understanding of the main mechanisms involved. The website also gives access to ‘ready-made’ versions of the long list of tables and figures that appear in the book.

The book is in four parts. Part I (Chapters 1–3) introduces the spiky world in which we live and deals with the basic empirical facts and methods that guide the subsequent analysis of the spiky or uneven allocation of human and economic activity across the globe, both between and within countries. Parts II and III are the core of the book. Part II (Chapters 4–6) deals with the main theories and empirics of urban economics and Part III (Chapters 7–9) does the same for geographical economics. Part IV of the book (Chapters 10 and 11) uses some of the main insights on urban and geographical economics in applying them to the topics of economic development and policy making. Of course we feel that the book is best read and studied as a whole from the front to the back cover by studying Chapters 1–11 sequentially. But for an actual course in which one would like to focus on the essentials of urban and geographical economics only, the reading menu could
simply start with Chapter 1 and continue the course with Parts II and III. Similarly, a focus on either urban or geographical economics would base the essential reading on either Part II or Part III, in particular if the course material consists partly of a number of key book chapters and partly of state-of-the-art research papers (many of which are already briefly introduced in the book). On the other hand, a course that zooms in on the empirics and applications of urban and geographical economics could consist of Part I, Chapters 6 and 9 and Part IV.

The (changes in) composition and content of the book are in no small part the result of the fact that we ourselves have used the book in various (advanced) undergraduate and graduate courses in the last decade or so. The 2009 edition has been used for courses at the universities of Utrecht, Rotterdam (Erasmus), Groningen, Suzhou, and Cambridge. Our own teaching experiences and also the feedback we got from scores of students helped to shape the new book. We also benefited from the feedback we received from various fellow lecturers and researchers across the globe. We owe them our thanks. We are also grateful to our research colleagues with whom we worked on various papers and projects on urban and geographical economics, the results of which proved a real source of inspiration for the new book.

We also want to thank Cambridge University Press (CUP) and especially ‘our’ CUP editors, Phil Good and Charles Howell, for not only giving us the opportunity to produce a third and rather different version of the book, but also for encouragement and patience. Likewise, we are grateful to Malcolm Todd who went through the whole manuscript and spotted and corrected many mistakes and also improved the use of English. Any remaining errors are, of course, our own. Michiel Gerritse was a real help in commenting on the manuscript and Thomas van den Berg provided excellent research assistance and input for the accompanying website. It is now 20 years since we started to work on the first edition of the book. Much has changed but not the continued support of our families and friends. Writing a book like this eats up a lot of time, and is also a spiky experience in itself, sudden and uneven bursts of activity and deadlines that have to be met during and also outside the regular academic calendar and working hours. In the end we very much enjoyed the experience of making the new book and we really hope the same goes for our readers.

Finally, we want to dedicate the book to the memory of Dirk Stelder (1953–2017), fellow traveller in urban and geographical economics. His work does not only show up clearly and in a very visible manner in Chapter 9, but as a lecturer Dirk was strongly involved over a large number of years in setting-up and teaching the first and second editions of our book to many cohorts of students of international economics and economic geography at the University of Groningen.

Steven Brakman, Harry Garretsen, Charles van Marrewijk
Groningen and Utrecht
