<b>0</b>	<b>Introduction</b>	1
0.1	On the Subject	1
0.2	A Motivating Discussion: Duality	4
0.3	On the Book	9
0.4	Synopsis of the Book	11
0.5	What Is Not in the Book	22
0.6	Prerequisites and Recommended Bibliography	23
0.7	Credo, Writing Style and Goals	24
0.8	Acknowledgments	25
<b>1</b>	<b>Basic Facts on Categories</b>	26
1.1	Set Theory	26
1.2	Notation and Conventions	27
1.3	Epimorphisms and Monomorphisms	28
1.4	Products and Coproducts	30
1.5	Equivalence of Categories	31
1.6	Bifunctors	32
1.7	Representable Functors	32
1.8	Inverse and Direct Limits	34
<b>2</b>	<b>Abelian Categories and Additive Functors</b>	37
2.1	Linear Categories	37
2.2	Additive Categories	38
2.3	Abelian Categories	40
2.4	A Method for Producing Proofs in Abelian Categories	44
2.5	Additive Functors	49
2.6	Projective Objects	55
2.7	Injective Objects	57

<b>3</b>	<b>Differential Graded Algebra</b>	62
3.1	Graded Algebra	62
3.2	DG $\mathbf{K}$ -Modules	72
3.3	DG Rings and Modules	74
3.4	DG Categories	78
3.5	DG Functors	80
3.6	Complexes in Abelian Categories	82
3.7	The Long Exact Cohomology Sequence	84
3.8	The DG Category $\mathbf{C}(A, M)$	90
3.9	Contravariant DG Functors	94
<b>4</b>	<b>Translations and Standard Triangles</b>	101
4.1	The Translation Functor	101
4.2	The Standard Triangle of a Strict Morphism	105
4.3	The Gauge of a Graded Functor	107
4.4	The Translation Isomorphism of a DG Functor	108
4.5	Standard Triangles and DG Functors	109
4.6	Examples of DG Functors	113
<b>5</b>	<b>Triangulated Categories and Functors</b>	117
5.1	Triangulated Categories	117
5.2	Triangulated and Cohomological Functors	122
5.3	Some Properties of Triangulated Categories	125
5.4	The Homotopy Category Is Triangulated	132
5.5	From DG Functors to Triangulated Functors	141
5.6	The Opposite Homotopy Category Is Triangulated	143
<b>6</b>	<b>Localization of Categories</b>	146
6.1	The Formalism of Localization	146
6.2	Ore Localization	148
6.3	Localization of Linear Categories	162
<b>7</b>	<b>The Derived Category <math>\mathbf{D}(A, M)</math></b>	165
7.1	Localization of Triangulated Categories	165
7.2	Definition of the Derived Category	172
7.3	Boundedness Conditions in $\mathbf{K}(A, M)$	176
7.4	Thick Subcategories of $\mathbf{M}$	180
7.5	The Embedding of $\mathbf{M}$ in $\mathbf{D}(\mathbf{M})$	182
7.6	The Opposite Derived Category Is Triangulated	183

<b>8</b>	<b>Derived Functors</b>	186
8.1	2-Categorical Notation	186
8.2	Functor Categories	189
8.3	Abstract Derived Functors	192
8.4	Triangulated Derived Functors	203
8.5	Contravariant Triangulated Derived Functors	211
<b>9</b>	<b>DG and Triangulated Bifunctors</b>	216
9.1	DG Bifunctors	216
9.2	Triangulated Bifunctors	220
9.3	Derived Bifunctors	224
<b>10</b>	<b>Resolving Subcategories of <math>\mathbf{K}(A, M)</math></b>	230
10.1	K-Injective DG Modules	230
10.2	K-Projective DG Modules	236
10.3	K-Flat DG Modules	238
10.4	Opposite Resolving Subcategories	240
<b>11</b>	<b>Existence of Resolutions</b>	242
11.1	Direct and Inverse Limits of Complexes	242
11.2	Totalizations	246
11.3	K-Projective Resolutions in $\mathbf{C}^-(M)$	254
11.4	K-Projective Resolutions in $\mathbf{C}(A)$	260
11.5	K-Injective Resolutions in $\mathbf{C}^+(M)$	272
11.6	K-Injective Resolutions in $\mathbf{C}(A)$	280
<b>12</b>	<b>Adjunctions, Equivalences and Cohomological Dimension</b>	289
12.1	Boundedness Conditions Revisited	289
12.2	The Bifunctor $\mathbf{RHom}$	292
12.3	The Bifunctor $\otimes^L$	295
12.4	Cohomological Dimensions of Functors and Objects	298
12.5	Theorems on Functors Satisfying Finiteness Conditions	303
12.6	Derived Restriction, Induction and Coinduction Functors	308
12.7	DG Ring Quasi-Isomorphisms	313
12.8	Existence of DG Ring Resolutions	315
12.9	The Derived Tensor-Evaluation Morphism	322
12.10	Hom-Tensor Formulas for Weakly Commutative DG Rings	326

<b>13 Dualizing Complexes over Commutative Rings</b>	330
13.1 Dualizing Complexes	330
13.2 Interlude: The Matlis Classification of Injective Modules	344
13.3 Residue Complexes	347
13.4 Van den Bergh Rigidity	357
13.5 Rigid Dualizing and Residue Complexes	366
<b>14 Perfect and Tilting DG Modules over NC DG Rings</b>	373
14.1 Algebraically Perfect DG Modules	373
14.2 Derived Morita Theory	387
14.3 DG Bimodules over K-Flat DG Rings	397
14.4 Tilting DG Bimodules	404
14.5 Tilting Bimodule Complexes over Rings	413
<b>15 Algebraically Graded Noncommutative Rings</b>	424
15.1 Categories of Algebraically Graded Modules	424
15.2 Properties of Algebraically Graded Modules	435
15.3 Resolutions and Derived Functors	444
15.4 Artin–Schelter Regular Graded Rings	455
<b>16 Derived Torsion over NC Graded Rings</b>	462
16.1 Quasi-Compact Finite Dimensional Functors	463
16.2 Weakly Stable and Idempotent Copointed Functors	468
16.3 Graded Torsion: Weak Stability and Idempotence	473
16.4 Representability of Derived Torsion	484
16.5 Symmetry of Derived Torsion	489
16.6 NC MGM Equivalence	498
<b>17 Balanced Dualizing Complexes over NC Graded Rings</b>	508
17.1 Graded NC Dualizing Complexes	509
17.2 Balanced DC: Definition, Uniqueness and Local Duality	514
17.3 Balanced DC: Existence	518
17.4 Balanced Trace Morphisms	531
<b>18 Rigid Noncommutative Dualizing Complexes</b>	542
18.1 Noncommutative Dualizing Complexes	542
18.2 Rigid NC DC: Definition and Uniqueness	552
18.3 Interlude: Graded Rings of Laurent Type	561

	<i>Contents</i>	xi
18.4	Graded Rigid NC DC	567
18.5	Filtered Rings and Existence of Rigid NC DC	575
18.6	Twisted Calabi–Yau Rings	581
