

## Intensification of Liquid–Liquid Processes

Explore and review novel techniques for intensifying transport and reaction in liquid–liquid and related systems with this essential toolkit. Topics include discussion of the principles of process intensification, the nexus between process intensification and sustainable engineering, and the fundamentals of liquid–liquid contacting, from an expert with over 45 years' experience in the field. Providing promising directions for investment and for new research in process intensification, in addition to a unique review of the fundamentals of the topic, this book is the perfect guide for senior undergraduate students, graduate students, developers, and research staff in chemical engineering and biochemical engineering.

**Laurence R. Weatherley** is the Albert P Learned Distinguished Professor of Chemical Engineering and Department Chair at the University of Kansas. Prior to joining the University of Kansas, he served as the Chaired Professor of Chemical Engineering, and Head of the Department of Chemical and Process Engineering, at the University of Canterbury in New Zealand. He has served as the Executive Co-Editor of the *Chemical Engineering Journal*. Dr. Weatherley is a Fellow of the Institution of Chemical Engineers, United Kingdom, and a Fellow of the Institution of Professional Engineers of New Zealand.
