List of Exercises	<i>page xi</i>
Preface to the Series	xvii
Preface	xxi
1 The Subjective Interpretation of Probability	1
2 Bayesian Inference	11
3 Point Estimation	31
4 Frequentist Properties of Bayesian Estimators	41
5 Interval Estimation	57
6 Hypothesis Testing	67
7 Prediction	81
8 Choice of Prior	89
9 Asymptotic Bayes	101
10 The Linear Regression Model	115
11 Basics of Random Variate Generation and Posterior Simulation	125
11.1 Monte Carlo Integration with MATLAB	126
11.2 Inverse Transform, Acceptance/Rejection, and Weighted Bootstrap	131
11.3 Importance Sampling	142
12 Posterior Simulation via Markov Chain Monte Carlo	155
12.1 Gibbs and Slice Sampling and the Metropolis–Hastings Algorithm	156
12.2 Three Introductory Examples of Gibbs Sampling	169
12.3 MCMC Sampling in Linear Models and their Variants	182
12.4 Diagnostic Checking with MCMC	206
13 Hierarchical Models	217
14 Latent Variable Models	239

15	Mixture Models	289
15.1	Some Scale Mixture of Normals Models	290
15.2	Other Continuous and Finite-Mixture Models	296
16	Bayesian Methods for Model Comparison, Selection, and Big Data	321
16.1	Procedures for Calculating Marginal Likelihoods	322
16.2	Bayesian Model Averaging and Variable Selection	326
17	Univariate Time Series Methods	343
18	State Space and Unobserved Components Models	367
19	Time Series Models for Volatility	391
20	Multivariate Time Series Methods	411
	Appendix	441
	Bibliography	449
	Index	461
