 “Dual Process Theory 2.0,” 476
 introduction to, 11, 472–473
 overview, 473–474
 questions regarding, 475–477
 summary, 477–478

- reasoning bias and dual process theory (cont.)
 time-pressure and load manipulations, 475–476
- reasoning in mathematical development
 analogical reasoning, 310–311, 566–567, 571–575, 577–578
 deductive reasoning, 567
 inductive vs. deductive reasoning, 578–579, 579f
 introduction to, 566–567
 problem-solving role in, 575–577
 relational processing, 571, 575–576
 summary of, 580
 transitive reasoning, 567–571, 574–575, 577, 578f
- Reber, Arthur, 16
- recognition memory, 326
- reconcilable disagreements in infant physical reasoning, 185–187
- Reduced Diffusivity (RD), 115–116
- referential-communication false-belief task, 245
- Regions Of Interest (ROI) approach, 53–68, 70
- relational processing, 571, 575–576
- religious identity, 486
- reminiscence* phenomenon, 1
- representations of meaning in cognitive models, 667
- representative intelligence in chimpanzees, 159
- resting state functional Magnetic Resonance Imaging (rsfMRI), 129–130
- retinocollicular projections, 36
- retinofugal segregation, 36
- reward-based decision-making, 668
- reward sensitivity in risky decision-making, 505–506
- rich-get-richer effect, 614–615
- risky decision-making across adolescence
 defined, 505
 explicit and ambiguous risk, 507–508
 future research directions, 509–510
 introduction to, 500, 500–501t, 502f
 overview, 505–509
 Prefrontal Cortex and, 507
 reward sensitivity, 505–506
 risk sensitivity, 506–509
 sensation-seeking in adolescence, 122
- Roberts, Steven, 352
- robotic modeling tools, 645–646, 646f, 648–652, 649f
- Robust Intelligent Adaptive Curiosity (R-IAC), 650
- Rosch, Eleanor, 200
- Rostrolateral Prefrontal Cortex (RLPFC), 573–574
- rote categorizing processes, 153
- sand painting training, 629
- Schauble, Leona, 591, 600
- schizophrenia, 38, 122
- school-entry mathematical achievement, 224–234, 226–227t
- The School of Athens* (Rafael), 1–2
- school performance and Working Memory, 614
- Scientific Discovery as Dual Search (SDDS) model, 590f, 590–591
- scientific method
 conclusion in, 312
 devising interventions, 311
 identifying causally relevant variables and hypotheses, 309–311
 identifying problem, 308–309
 interpretation of data, 311–312
 overview, 301, 308–312
- scientific reasoning skills
 cognitive competencies and, 592–597
 conceptual change research, 589–591
 Control of Variables Strategy, 585–594, 597
 domain-general mechanisms, 590–591
 domain-specific mechanisms, 588–592, 588–590f
 emergence of, 585–586, 586f
 future research directions, 600–602
 general cognitive abilities, 592–597, 599f, 599–600
 individual differences, 592–597
 introduction to, 585
 metacognition and, 598–599
 refinement of, 586–592
 Theory of Mind and, 597–599
 verbal abilities and, 594–595
 Working Memory and, 595–597
- scientific thinking and reasoning in infants and young children
 causal explanations, 301
 “child-as-scientist” view, 299–308
 defined, 300–301
 first wave of Theory Theory, 302–303
 future research directions, 308–312
 introduction to, 299–300
 scientific method, 301, 308–312
 second wave of Theory Theory, 306–308
 summary of, 312–313
- Score-Threshold (ST) parameter in SDCC, 333–334
- scrutable Open Learner Models, 676
- second wave of Theory Theory, 306–308
- Selection Processor (SP), 415
- selective processing by infants, 273
- selective-stabilisation of synapses model, 34–37
- self-control development, 502–504
- Self-Ordered Pointing task, 429–430

- self-organization of structured developmental trajectories, 651
- self-recognition in Nonhuman Primates, 155
- self-teaching hypothesis, 556–558
- semantic-incongruity tasks, 255
- semantic knowledge, 668
- semantization in Nonhuman Primates, 154–155
- sensation-seeking in adolescence, 122
- sensorimotor stage of development, 141
- sensory memory, 595, 606
- sentience, defined, 16
- serial electron microscopy, 31
- Serial Reaction Time (SRT) task, 629–631
- shared-intentionality framework, 275
- short-term memory, 437, 606, 668
- Sibling-Descendant Cascade-Correlation (SDCC) network, 321–322, 322–331*f*, 327–328, 333–334
- signaling of neurons, 22
- signals in human language and Nonhuman Primates communication, 159–160
- Signature limits in two-system accounts of early psychological reasoning, 246–258
- simple processing units in Artificial Neural Networks, 666
- Simulation Theory (ST), 409–410
- single-cell transcriptomes, 95
- size congruity effect, 390–392
- skeletal causal principles, 197
- Smith, Adam, 24
- Smith, Linda, 198
- social aggression, 504–512
- social behaviors, 15–18, 23, 39–40, 89–99
- social brain hypothesis, 269
- social categorization/cognitive development
 adherence and enforcement of norms, 488–489
 avoiding negative consequences, 491–492
 behavior and learning influences, 487–488
 consequences of, 485–491
 extended contact in school, 491–492
 influence on children's view of others, 486–487
 influence on children's view of themselves, 485–486
 ingroup bias and, 486–487, 489–491
 intergroup bias and, 486–489
 introduction to, 11, 481
 in Nonhuman Primates, 152–158
 origins in infancy, 481–482
 in preschool and beyond, 482–485
 social essentialism, 484–485, 490
 summary of, 492
- Social-Cognitive Developmental Theory, 489
- social collectives, 482
- social essentialism, 346–347, 484–485, 490
- social group membership, 482
- social identity, 485, 489
- social influences in learning, 332
- social intuitionist model of moral reasoning, 286–288
- Social Network Aggression Task (SNAT) paradigm, 504–512
- social organization, 15
- social reasoning, 329
- social self-control, 504–512
- social skills, 225
- Socio-Economic Status (SES), 227, 361, 435–437, 452, 455, 671
- sociocultural phenomena, 15–18
- socioemotional competence, 432, 679
- sociomoral reasoning, 255–256
- Socrates, 1
- somatosensory modality, 64
- Some Thoughts Concerning Education* (Locke), 5
- sophisms, defined, 2
- spatial abilities, 537
- spatial cognition, 383
- spatial contiguity of objects, 6
- spatiotemporal (“where”) information in infant physical reasoning, 179–180
- speech understanding in early childhood, 280–281
- Spelke, Elisabeth, 9
- spelling-to-sound system, 563
- Spinoza, Baruch, 4
- spontaneous-response false-belief task, 245
 behavioral task, 245
 neural task, 245
- stage-wise beliefs, 598
- standardized assessments, 568, 613
- “state of life,” 19–20
- STEM fields, 361, 490, 589
- stereotyping in children's categorization, 346–347
- Stop-Signal Delay (SSD), 624, 629–631
- Stop-Signal task, 124, 625, 628–631
- Strategy Choice And Discovery Simulation (SCADS), 372–373
- striatal-thalamocortical-striatal loops, 519
- striatum in approach module, 519
- Stroop-like measure of inhibitory function development, 144, 388
- structured learning environment, 666
- sub-symbolic brain-like structures, 318
- subordinate-level infant categorization, 200
- successor function, 217
- suicidality in adolescence, 122
- sulcal patterns in fetal cognition, 54, 55–68*f*

- sulcal roots, 70
 sulcus shape characterization, 70
 superordinate level of infant categorization, 200, 202–203
 symbolic arithmetic development, 390–397
 Symbolic Comparison task, 541
 symbolic magnitude processing, 537
 symbolic numbers, 365–367, 543
 Symbolic Numerical Stroop task, 390–392, 394–395
 symbolic rational numbers, 367–368, 373–377
 symbolic rule-based models, 320
 symbolic whole number arithmetic
 adaptive strategy choices, 369–370
 basic empirical phenomena, 369–372
 better execution of more efficient strategies, 371
 change in, 370
 conceptual understanding of, 371–372
 generation of, 370–371
 increasing use of more efficient strategies, 371
 magnitude knowledge in, 372
 modeling development of, 372–373
 more adaptive choices among strategies, 371
 variability in, 369
 symbols in human language and Nonhuman Primates
 communication, 159–160
 symmetric division of progenitor cells, 87
 synapse selection, 33–37
 synaptic over-growth, 60–65
 synaptic pruning, 93, 126
 synaptogenesis/synaptic epigenesis
 adolescence to adulthood, 126
 in cerebellar cortex, 35
 in cortical microstructure, 54–57
 of the human brain, 27–29
 in visual cortex, 36–37
 systematic errors of development, 142–144

 T1-weighted and T2-weighted images, 87–88, 89*f*, 94*f*
 Taine, Hippolyte, 8
 TARDIS system of Open Learner Models, 677, 678*f*, 678
 task performance measures, 522
 task-related Magnetic Resonance Imaging, 107
 task-switching paradigms, 632, 634
 taxonomic word learning, 326–327, 327*f*, 329
 teaching experiments in explanation-based learning, 176–177
 technology as tool for learning/teaching, 671–682
 teleology, 273, 410, 420
 teleological accounts of infants' psychological reasoning, 243–258

 temporal contiguity of objects, 6
 Temporal-Parietal Junction (TPJ), 248, 276
 Test of Early Mathematics Achievement-3 (TEMA-3), 220
 testosterone, 98, 128, 503
 thalamo-cortical connectivity, 65–66
 Theory of Body (TOBY) module processes, 197
 Theory of Mind Module (TOMM) processes, 197, 415
 Theory of Mind (ToM)
 human social cognition in early childhood, 242, 273–275, 289–291
 input language in children's theory of mind, 349
 introduction to, 11
 neurocomputational methods, 679–680, 680*f*
 in newborns, 37
 in Nonhuman Primates, 155–156
 scientific reasoning skills and, 597–599
 Theory of Mind (ToM) in children
 cognitive analysis, 415–417
 counterfactual reasoning, 417–420
 early sensitivity to False Belief task, 414–415*r*, 414–415
 Executive Functions and, 411–412
 folk psychology and, 408–411
 historical development, 408
 introduction to, 408
 language and pragmatics, 412–414
 overview of, 408–417
 summary of, 420
 Theory Theory view of cognitive development, 302–303, 409–410
 Theory of Mind (ToM) in infants
 attributing false belief to others, 254–257
 attributing preferences to others, 251–254
 categorizing objects, 253–254
 cognitive integration, 257–258
 conceptual-change accounts, 244–245
 constructivist accounts, 242–243
 evidence against cognitive encapsulation, 251–258
 failure at traditional tasks, 250–251
 future research directions, 258–260
 false-belief inferences based on general knowledge, 256
 individual differences, 259–260
 interpreting change in label, 253
 interpreting ostensive cues, 254
 introduction to, 242
 non-replications and component abilities, 258–259
 novel label interpretation, 253, 256–257
 one-system accounts, 245–247
 physical reasoning, 252–255

- recent accounts, 245–247
 revising beliefs, 257
 semantic-incongruity tasks, 255
 sociomoral reasoning, 255–256
 summary of, 260–261
 teleological accounts, 243–244
 two-system accounts, 245–251
 understanding of interlocking mental states by infants, 249–250, 250f
- A Theory of the Epigenesis of Neuronal Networks by Selective Stabilization of Synapses* (Changeux, Courrèges, Danchin), 28, 33–37
- Theory Theory (TT) view of cognitive development, 302–303, 409–410, 420
- thinking substance, defined, 3
- thirst state, 23
- threat under protection behavior of Nonhuman Primates, 158
- 3D Magnetic Resonance Imaging (MRI), 10, 50–51, 53
- three-systems theory of the cognitive brain, 145f
- Tomasello, Michael, 9
- torque-rule module, 324
- Transcranial Direct Stimulation (tCDS), 429
- transitive reasoning, 567–571, 574–575, 577, 578f
- Treatise on Man* (Descartes), 3
- The Treatise on Sensations* (Condillac), 6
- Treatise on the Passions* (Descartes), 4
- triadic neural systems model
 approach system, 516–519
 avoidance system, 516–519
 control system, 517–520
 data organization/reduction, 522–524, 524f
 dynamic interactions between systems, 527–530, 528–529f
 functional architecture of, 522–527
 fundamental assumptions, 518–519
 introduction to, 516–518, 517–525f
 Machine Learning tools and, 516, 518, 521–522, 524–526, 525f, 528–529f, 530
 maturation of system dynamics, 530, 531f
 neural substrates, 519–520
 overall testing strategy, 522, 523f
 overview, 516–521
 predictive model for, 524–527, 525–526f
 summary of, 530–531
 testing of, 521–530
- triangular relationship in language, 159
- triggers in explanation-based learning, 175–176
- trolley dilemmas in moral reasoning, 288
- True Belief test, 169
- Turkish linguistic development, 343
- Twitter-based studies of social behaviors, 89–99
- 2AFC Dot Discrimination task, 223
- Two-Object task, 251–254
- two-system accounts of early psychological reasoning, 245–258
- two-system model of infant physical reasoning. *See* physical reasoning in infants
- type-of-contact rule in infants, 174
- Typically Achieving (TA) children, 219
- Typically Developing (TD) children, 626–629
- Typically Developing (TD) young adults, 627
- Uncinate Fasciculus (UF), 130
- unicellular organisms, 18–20
- universal grammar, 164
- unLOCKE project, 681–682, 681f
- unobserved variables, 307–308
- utilization behavior, 427
- vagus nerve, 22
- valuation network of the brain, 507
- variability in whole number arithmetic strategies, 369
- variability theorem, 31–33
- variation-selection-amplification, 27
- Ventral Striatum (VS), 122, 125, 526f, 527
- Ventromedial Prefrontal Cortex (VM-PFC), 430–431, 527
- verbal ability, 217, 224, 260, 594–595
- verbal task research, 276, 290
- verbal testimony understanding in early childhood, 281
- vertical ‘décalages,’10
- video games and Working Memory training, 615–618
- Violation-of-Expectation (VOE) method, 168–170, 172–173, 245, 250, 259, 270
- visceroreception process, 21
- visual metaphors in numerical knowledge development, 363
- visual-spatial short-term storage, 606
- Visual Word Form Area (VWFA), 54
- visuo-spatial skills, 220–222
- Voxel-Based Morphometry (VBM), 68
- Vygotski, Lev, 9
- water diffusion process in White Matter, 71
- Wechsler Individual Achievement Test, 613
- weeks of Gestational Age (wGA), 51, 53–54, 59
- well-being state, 23
- White Matter (WM)
 adolescence to adulthood changes, 127–128
 on bundles growth and organization, 59–60
 early development of, 57–64, 58–70f

- White Matter (WM) (cont.)
 estimated trajectories, 89–91*f*, 92*f*
 Fractional Anisotropy of, 115–116
 functional development and, 61–65, 63–64*f*
 maturation changes, 60–61, 65–66, 97–98, 98–99*f*,
 100*f*
 measuring microstructure and connectivity, 70–72,
 71*f*
 whole brain network organization, 128–129
 Williams syndrome, 327
 Win-Stay, Lose-Sample (WSLS) algorithm, 330–331
 Wisconsin Card Sorting Task, 624
 Wolff, Christian, 7
 “Woodward effect,” 252–254, 273–276
 word learning, 329
 word-object associations, 326
 Word Problems (WP), 223
 word-word mappings, 344
 words as invitations in children’s categorization,
 342–343
 Working Memory, 124–125, 131
 Attentional Control in, 606
 auditory short-term storage, 606
 cognitive control and, 454, 457–458, 500–501
 defined, 595–596, 623
 Executive Function and, 418, 428–430
 improvements in, 260
 information processing and, 595–596, 607–608
 inhibitory control in, 388
 math skills and, 218, 220–222
 maturation/fixation interpretation of, 607–608
 scientific reasoning skills and, 595–597
 visual-spatial short-term storage, 606
 Working Memory Training (WMT)
 Attention Deficit/Hyperactivity Disorder and,
 608–609
