1 A Happy Ending		1
2 Overview		4
3 Configurations		8
3.1 Small Configurations		8
3.2 Orientations and Order Types		10
3.3 Defining Configurations		12
3.4 Example Configurations		13
3.5 Partitions by Lines		14
4 Subconfigurations		19
4.1 Definitions		19
4.2 Partial Orders and Quasi-Orders		20
4.3 Antichains		21
4.4 Well-Quasi-Ordering		22
5 Properties, Parameters, and Obstacles		24
5.1 Definitions		24
5.2 Obstacles		25
5.3 Parameters from Obstacles		27
5.4 Relation between Parameters		28
5.5 Comparing Parameters		29
6 Computing with Configurations		33
6.1 Input Representation		33
6.2 Computing the Order Type		34
6.3 Finding Subconfigurations		36
6.4 <i>O</i> -Notation		37
6.5 Property Testing		38

7	Complexity Theory	43
7.1	Decision Problems and Complexity Classes	43
7.2	Approximation Algorithms	45
7.3	Parameterized Complexity	46
7.4	Complexity of Obstacle-Based Parameters	47
7.5	Parameterized Complexity of HITTING	49
8	Collinearity	53
8.1	Planting Orchards	53
8.2	Definitions	55
8.3	Inequalities	56
8.4	Finding All Lines	57
8.5	Complexity of Line Covers	61
8.6	Property Testing	62
8.7	Obstacle Size and Well-Quasi-Ordering	63
8.8	Approximation	67
9	General Position	72
9.1	No-Three-in-Line	72
9.2	Finding General-Position Subconfigurations	75
9.3	Property Testing	78
9.4	Inequalities	79
9.5	Approximation	81
9.6	Entropy Compression	83
10	General-Position Partitions	87
10.1	Glimpses of Higher Dimensions	87
10.2	Inequalities	92
10.3	Complexity	93
10.4	Approximation	98
10.5	Configurations Covered by Few Lines	101
11	Convexity	106
11.1	Happy Endings Revisited	106
11.2	Additional Examples	110
11.3	Obstacles	113
11.4	Finding Convex Subconfigurations	115
11.5	Finding Convex Partitions	117
11.6	Inequalities	119
11.7	Well-Quasi-Ordering	122
12	More on Convexity	125
12.1	Weak Convexity	125
12.2	Complexity and Well-Quasi-Ordering	127
12.3	Crossing Families	128
12.4	Onion Layers	129
12.5	Inequalities	132

Contents**vii**

12.6	Polygons Containing Many Points	134
12.7	Depth and Deep Points	135
13	Integer Realizations	141
13.1	The Perles Configuration	142
13.2	Polygons	144
13.3	Points on Two Lines	145
13.4	Non-Cocircularity	147
13.5	Harborth, Erdős, and Ulam	148
14	The Stretched Geometry of Permutations	151
14.1	The Stretching Transformation	151
14.2	Permutations and Patterns	155
14.3	Stair-Convexity	157
14.4	Characterization	160
14.5	Recognition	163
14.6	Finding Subconfigurations	164
15	Configurations from Graphs	166
15.1	Definitions	166
15.2	Convex Embeddings of Arbitrary Graphs	169
15.3	Hardness Proofs Based on Convex Embeddings	171
15.4	Three-Line Embeddings of Bipartite Graphs	172
16	Universality	177
16.1	Planarity	177
16.2	Definition	179
16.3	Obstacles	181
16.4	Relations to Other Parameters	185
17	Stabbing	188
17.1	Path and Tree Stabbing Numbers	189
17.2	Stabbing versus Shattering and Length	190
17.3	Inequalities and Complexity	195
17.4	Unstabbed Segments	197
17.5	Well-Quasi-Ordering	200
17.6	Applications of Unstabbed Segments	202
18	The Big Picture	207
18.1	Properties	207
18.2	Parameters	208
18.3	Only the Beginning	210
	<i>Bibliography</i>	211
	<i>Index</i>	223
