Index

active set, 194, 209
adjoint method (see also design sensitivity analysis), 413
assignment problem, 396
augmented Lagrangian method, 269
backtracking, 357
barrier functions, 259
Bellman’s principle, 375
BFGS formula, 113
Big M method, LP, 148
Binet’s formula, 55
bisection method, zero finding, 78
Bland’s rule, 153
Box’s complex method, 315
bracketing the minimum, 50
branch and bound algorithm, 359
Brent’s algorithm, quadratic fit, 79
Brent’s quadratic fit, 66
conjoint analysis, 342
conjugate directions, 104, 296
conjugate gradient method, 104
continuity, 23
convergence
rate, 78
steepest descent method, 102
covex set, 92
covexity, 92, 204
criss-cross method, LP, 158
cubic fit, 67
cyclic coordinate search, 287
cycling, 153
descent direction, 193
design sensitivity analysis, 417
adjoint method, 413
compliance, 419
direct differentiation, 438
direct method, 412
eigenvalue, 436
eigenvector, 437
penalty functions, 416
DFP formula, 113
Dijkstra algorithm, 402
directional derivative, 25
divided differences, 24
dual function, 263
dual simplex method, 156
duality, 153, 262, 274
dynamic impact absorber, 238
elementary row operations, 31
existence theorem, 20
Farkas lemma, 196
feasible direction, 193
Fibonacci algorithm, 56
Fletcher–Reeves algorithm, 106
formulation, 128, 188
geometric algorithm, 72, 309, 312, 333
geometric programming, 274
goal attainment approach, 340
Golden Section ratio, 58
Golden Section search, 58
Gomory cut method, 363
gradient projection method, 209
gradient vector, 24
graphical solution, 17, 185
Hessian, 24
historical sketch, 2
Hooke and Jeeves pattern search, 290
Hungarian method, 396
Index

implicit enumeration, 354
interior methods, 167, 259, 261
KKT conditions, 192, 199

Lagrange multipliers, significance of, 128, 131
Lemke’s algorithm, 172
linear complementary problem, 171
linear independence of vectors, 31
min-max Pareto solution, 336
monotone structural problems, 367
Nelder and Mead method, 299
Newton’s method, 108
Newton’s method, zero finding, 77
optimal control problem, 242
optimality criteria method, 419
Pareto optimality, definition, 330
penalty functions
  extended interior, 259
  exterior, 254
  interior, 259
pointwise constraints, 238
Polak–Ribiere algorithm, 105
positive definite matrix, 22
posynomial, 275
Powell’s method of conjugate directions, 296
preference functions approach, 341
primal-dual method for LP, 158
projection matrix, 211
quadratic form, 22
quadratic programming, 171
reduced gradient, 224
regular point, 199
revised simplex method, 150
Rosenbrock’s method, 293
saddle point, 263
scaling, 103, 123
sensitivity analysis
  postoptimal, LP, 161
  postoptimal, NLP, 206
separable problems, 266
sequential quadratic programming, 232
shape optimization, 426
shortest path, 402
simulated annealing method, 305
steepest descent method, 96
tangent space, 201
taylor series, 29
time-dependent constraints, 238
topology optimization of structures, 423
transformation of variables, 317
transportation problem, 389
traveling salesman problem via GA, 312
unimodal function, 50
velocity fields, 427
vibration, 435
Weierstraas existence theorem, 20
weighted-sum approach, 338
zero of a function, 76
