- algebra
  - block with cyclic defect, 382
  - Nakayama, 388
  - serial, 385, 388, 391
- algebraic
  - module, 155
- almost source algebra, 21, 198
- almost source idempotent, 21
- Alperin's Fusion Theorem, 173
- Alperin's weight conjecture, 364
  - for abelian defect, 67
  - for blocks of finite groups, 64
  - in terms of alternating sums, 78, 364
  - in terms of fusion, 257
- Alperin–McKay conjecture, 77
- balanced map, 463
- basic algebra
  - of a block with cyclic defect, 382
- block, 9
  - $p$ -solvable groups, 358
  - almost source algebra, 21
  - almost source idempotent, 21
  - Brauer correspondent, 47
  - central defect, 41
  - correspondence, 17
  - covered block, 52
  - decomposition map, 82
  - decomposition of a group algebra, 6
  - decomposition of a module, 8
  - defect, 7
  - defect group, 6
  - defect zero, 39
  - fusion system, 189
  - generalised Cartan matrix, 83
  - inertial quotient, 47
  - nilpotent, 70, 220
  - normal defect, 86
  - of principal type, 19
  - principal, 7
  - source algebra, 20
  - source idempotent, 20
  - with cyclic defect, 374
- Bouc complex, 252
- Brauer correspondence, 43
- Brauer correspondent, 47
- Brauer graph, 410
- Brauer pair, 15
- Brauer tree, 379, 382, 410, 412
- Brauer's First Main Theorem, 46
- Brauer's height zero conjecture, 73
- Brauer's  $k(B)$ -conjecture, 76
- Brauer's Second Main Theorem, 81
- Brauer's Third Main Theorem, 19
- Brauer–Feit Theorem, 74
- Broué's abelian defect group conjecture, 48, 297
- Brown complex, 248
- Cartan matrix
  - of a block, 35, 36
- category
  - on a finite  $p$ -group, 166
  - subdivision, 245
  - triangulated, 472
- centric linking system, 244
- centric subgroup, 172
- chain
  - of  $p$ -subgroups, 78
- character
  - defect, 69
  - fusion stable, 215

- height, 68
  - in a block, 29
- characteristic biset, 205
- Clifford Theory, 52
- constrained fusion system, 244
- covered
  - block, 52
  - module, 61
- Dade group, 121
  - endotrivial subgroup  $T_{\mathcal{O}}(P)$ , 133
- Dade's fusion splitting theorem, 152
- Dade's ordinary conjecture, 78
- Dade's projective conjecture, 79
- defect group, 6
  - central, 41
  - normal, 86
- defect of a character, 69
- Defres, 120, 125
- distinguished triangle, 472
- Donovan's conjecture, 9, 10
- EI*-category
  - regular, 247
- EI*-category, 245
- endopermutation module, 115
- endosplit  $p$ -permutation resolution, 157
- endotrivial module, 131
- essential subgroup, 173
- extension axiom, 167
- extensions of nilpotent blocks, 231
- finite representation type, 101
- flat module, 468
- focal subgroup, 171, 218
- Fong–Reynolds reduction, 58
- Frobenius inertial quotient, 346
- fully  $K$ -normalised, 178
- fully centralised, 166
- fully normalised, 166
- fusion stable
  - endopermutation module, 305
  - endosplit  $p$ -permutation resolution, 306
- fusion system, 167
  - centric subgroup, 172
  - constrained, 244
  - essential subgroup, 173
  - normaliser, 178
  - of a block, 189
  - of a finite group, 167
  - of an almost source algebra, 198
  - orbit category, 169
  - product, 188
  - quotient, 185
  - radical subgroup, 173
  - weight, 261
- generalised decomposition
  - matrix, 82
  - number, 82, 129
- gluing conjecture, 257
- Grothendieck group, 369
- group algebra
  - Brauer pair, 15
- Harris–Knörr correspondence, 60
- height of a character, 68
- Hopf algebra, 9
- hyperfocal subgroup, 171
- $\text{IBr}_K(G, b)$ , 29
- inertial quotient, 47
- $\text{Irr}_K(G, b)$ , 29
- isotypy, 286
- $k(GV)$ -problem, 76
- $K$ -normaliser, 178
- Kessar's rationality conjecture, 80
- Külshammer–Puig class, 254
  - of a chain, 258
- $\ell(A)$ , 351
- $L^0(G, b)$ , 34
- Malle and Robinson's conjecture, 76
- mapping cone, 488
- McKay conjecture, 77
- module
  - algebraic, 155
  - covered module, 61
  - endopermutation, 115
  - endotrivial, 131
  - flat, 468
  - fusion stable endopermutation, 305
  - uniserial, 102, 388, 391
  - virtual projective, 369
- Morita equivalence
  - virtual, 268
- multiplicity module, 337
- Nakayama
  - algebra, 388

- nilpotent
  - block, 70, 220
- normal chain, 78
- $N_\varphi$ , 167
- octahedral axiom, 473
- Olsson's conjecture, 77
- orbit category, 169
- $\mathcal{P}(A, B)$ , 267
- $p$ -constrained group, 358
- $p$ -nilpotent group, 153, 222
- $p$ -permutation equivalence, 287
- $p$ -solvable group, 358
- perfect
  - bimodule, 266
  - character, 270
  - isometry, 270
- $\text{Pic}(A)$ , 402, 446
- Picard group
  - of a block with cyclic defect, 446
  - of a selfinjective serial algebra, 402
- principal block, 7
- Puig's Conjecture, 20
  - for blocks of  $p$ -solvable groups, 358
- Quillen complex, 248
- quiver
  - of a serial algebra, 394
- radical chain, 78, 79
- radical subgroup, 173
- regular  $EI$ -category, 247
- representation type
  - finite, 101
  - tame, 106, 115
  - wild, 115
