Volume II

Introduction	<i>page</i> 1
6 Blocks and Source Algebras	5
6.1 Blocks of group algebras and defect groups	6
6.2 Characterisations of defect groups	10
6.3 Brauer pairs for finite group algebras	15
6.4 Source algebras of blocks	20
6.5 Characters in blocks	29
6.6 Blocks with a central defect group	38
6.7 Brauer's First Main Theorem	43
6.8 Clifford Theory	52
6.9 The Harris–Knörr correspondence	60
6.10 Weights of blocks	63
6.11 Heights of characters	68
6.12 On the number of irreducible characters in a block	74
6.13 Brauer's Second Main Theorem	81
6.14 Blocks with a normal defect group	85
6.15 The bimodule structure and rank of a source algebra	88
6.16 On automorphisms of blocks and source algebras	90
6.17 On the centre of block algebras	94
7 Modules over Finite p-Groups	100
7.1 Modules over cyclic p -groups	101
7.2 Modules over a Klein four group	106
7.3 Endopermutation modules	115
7.4 The Dade group action on interior P -algebras	126

7.5	Endotrivial modules	131
7.6	Shifted cyclic subgroups and Dade's Lemma	136
7.7	Endotrivial modules over abelian p -groups	139
7.8	Endopermutation modules over abelian p -groups	145
7.9	Splitting of fusion in endopermutation modules	149
7.10	Endopermutation modules and p -nilpotent groups	153
7.11	Endosplit p -permutation resolutions	157
8	Local Structure	165
8.1	Fusion systems	165
8.2	Alperin's Fusion Theorem	171
8.3	Normalisers and centralisers in fusion systems	178
8.4	Quotients and products of fusions systems	184
8.5	Fusion systems of blocks	189
8.6	Fusion systems of blocks and Clifford Theory	193
8.7	Fusion systems of almost source algebras	198
8.8	Almost source algebras and p -permutation modules	206
8.9	Subsections	211
8.10	Characters and local structure	214
8.11	Nilpotent blocks	219
8.12	Extensions of nilpotent blocks	231
8.13	Subdivisions of fusion systems	244
8.14	Külshammer–Puig classes	253
8.15	Weights for fusion systems	261
9	Isometries and Bimodules	266
9.1	Perfect bimodules and Grothendieck groups	266
9.2	Perfect isometries	269
9.3	Perfect isometries, derived and stable equivalences	274
9.4	Trivial source bimodules and Grothendieck groups	279
9.5	Isotypies and p -permutation equivalences	286
9.6	Galois conjugate blocks are isotypic	289
9.7	Splendid Morita and derived equivalences	294
9.8	Splendid stable equivalences	299
9.9	Fusion-stable endopermutation modules	305
9.10	Bimodules with endopermutation source and separable equivalence	313
9.11	Stable and Morita equivalences with endopermutation source	317

Contents of Volume II

vii

10	Structural Results in Block Theory	329
	10.1 On dimensions of block algebras	329
	10.2 Characterisations of nilpotent blocks	332
	10.3 On vertices of simple modules	337
	10.4 Abelian defect and proper focal subgroup	341
	10.5 Abelian defect and Frobenius inertial quotient	346
	10.6 Blocks of finite p -solvable groups	357
	10.7 Alperin's weight conjecture and alternating sums	364
11	Blocks with Cyclic Defect Groups	374
	11.1 The structure of blocks with cyclic defect groups	375
	11.2 Local structure	384
	11.3 Selfinjective serial algebras	388
	11.4 Modules over selfinjective serial algebras	396
	11.5 Picard groups of selfinjective serial algebras	400
	11.6 Symmetric algebras stably equivalent to a serial algebra	403
	11.7 The Brauer tree	409
	11.8 Split basic Brauer tree algebras	414
	11.9 The derived category of a Brauer tree algebra	420
	11.10 Irreducible characters and decomposition numbers	426
	11.11 Walking around the Brauer tree	431
	11.12 A splendid Rickard complex for blocks with cyclic defect	436
	11.13 The \mathcal{O} -algebra structure of blocks with cyclic defect groups	438
	11.14 Picard groups of blocks with cyclic defect groups	444
	11.15 The source algebras of blocks with cyclic defect groups	447
12	Blocks with Klein Four Defect Groups	450
	12.1 The structure of blocks with Klein four defect groups	450
	12.2 A stable equivalence for blocks with Klein four defect groups	452
	12.3 The source algebras of blocks with Klein four defect	457
	12.4 Derived categories of blocks with Klein four defect	459
	Appendix	463
	A.1 The tensor product	463
	A.2 Triangulated categories	471

A.3	The k -stable category is triangulated	479
A.4	Homotopy categories are triangulated	488
	<i>Bibliography</i>	497
	<i>Index</i>	508
