

## Contents

|   |                 |
|---|-----------------|
| <i>Preface</i>  | <i>page</i> vii |
| <b>1 Phenomenology</b>  | 1               |
| 1.1 Basic Properties  | 1               |
| 1.2 London Theory   | 12              |
| 1.3 Electromagnetic Response  | 17              |
| 1.4 Physical Ideas, Microscopic Origin of Superconductivity         | 21              |
| 1.5 Further Reading: Magnetic Field Penetration in the General Case | 25              |
| <b>2 The BCS Theory</b>   | 28              |
| 2.1 The Cooper Problem  | 28              |
| 2.2 Effective Interaction   | 37              |
| 2.3 BCS Wave Function   | 46              |
| 2.4 Determination of $u_k$ and $v_k$ . The Gap Equation             | 55              |
| 2.5 Further Analysis of the Ground State                            | 65              |
| 2.6 Further Reading: Pair Wave Function, Mathematical Details       | 76              |
| <b>3 Thermodynamics of the BCS Theory</b>                           | 79              |
| 3.1 Excited States  | 79              |
| 3.2 Tunneling   | 87              |
| 3.3 Free Energy   | 92              |
| 3.4 Gap Equation, Critical Temperature                              | 95              |
| 3.5 Specific Heat, Critical Field                                   | 98              |
| 3.6 Isotope Effect, Coulomb Repulsion                               | 103             |
| 3.7 Electron-Phonon Interaction                                     | 108             |
| 3.8 Other Pairing Symmetries and Mechanisms                         | 115             |
| <b>4 Response to an External Perturbation</b>                       | 128             |
| 4.1 Introduction  | 128             |
| 4.2 Coupling to the Electromagnetic Field                           | 128             |
| 4.3 Linear Response   | 130             |
| 4.4 Coherence Factors   | 135             |
| 4.5 BCS Response Function   | 139             |
| 4.6 Conductivity and Meissner Effect for the BCS State              | 143             |
| 4.7 Impurities Effect   | 146             |
| 4.8 Other Responses   | 157             |

|  |     |
|--|-----|
| <b>5 Macroscopic Effects</b>                                     | 166 |
| 5.1 Gauge Invariance   | 166 |
| 5.2 Flux Quantization  | 170 |
| 5.3 Josephson Effects  | 173 |
| <b>6 Ginzburg–Landau Theory</b>                                  | 184 |
| 6.1 Simple Ginzburg–Landau Theory                                | 185 |
| 6.2 Magnetic Field Effect  | 189 |
| 6.3 Vortices   | 199 |
| 6.4 Application of Superconductivity to High Currents and Fields | 204 |
| 6.5 Validity of the Theory, the Ginzburg Criterium               | 207 |
| 6.6 Further Reading: The Little–Parks Experiment                 | 211 |
| <b>7 Bose–Einstein Condensation</b>                              | 214 |
| 7.1 The Perfect Bose Gas   | 214 |
| 7.2 The Effect of Interactions                                   | 217 |
| 7.3 Bogoliubov Theory  | 222 |
| 7.4 The Case of ${}^4\text{He}$                                  | 229 |
| 7.5 Superfluidity  | 233 |
| 7.6 Critical Velocity  | 235 |
| 7.7 Further Reading: Feynman Relation                            | 239 |
| <b>8 The BEC–BCS Crossover</b>                                   | 243 |
| 8.1 Cold Atoms   | 243 |
| 8.2 Scattering Length  | 250 |
| 8.3 Feshbach Resonance   | 255 |
| 8.4 The BEC–BCS Crossover, the Unitary Limit                     | 261 |
| 8.5 The BCS Approximation  | 266 |
| 8.6 The Vortex Lattice   | 274 |
| 8.7 Spin-Polarized Fermi Gases                                   | 279 |
| <b>9 Strong Coupling Superconductivity</b>                       | 288 |
| 9.1 Introduction   | 288 |
| 9.2 Normal State   | 289 |
| 9.3 Eliashberg Equations   | 299 |
| 9.4 Critical Temperature   | 306 |
| 9.5 Coulomb Repulsion  | 312 |
| 9.6 Density of States  | 315 |
| 9.7 Further Reading: Migdal’s Theorem                            | 321 |
| <b>Appendix Second Quantization</b>                              | 326 |
| <i>References</i>  | 331 |
| <i>Index</i>   | 333 |
