Preface	xiii	3.9 Heavy Pollution's Impact on Disease and Premature Death	60
Acknowledgment	xvi	3.10 Conclusions	61
List of Abbreviations and Acronyms	xvii	Questions	61
1		4	
Understanding Pollution	1	Chemical Exposures and Risk Assessment	67
1.1 The Anthropocene	2	4.1 Exposure Assessment	68
1.2 Introducing Pollution	2	4.2 A CDC Study on Exposure to Xenobiotic Chemicals	69
1.3 Devastating versus Tiny Levels of Pollution	10	4.3 Epidemiological Studies	70
1.4 Nature's Services	10	4.4 Chemical Risk Assessment	72
1.5 Soil	13	4.5 Risk Management	76
1.6 Root Causes of Environmental Problems	14	4.6 Risks to Children	78
1.7 Personal Actions Have Consequences	16	4.7 Alternative Methods of Chemical Risk Assessment	79
1.8 Living within Our Planet's Boundaries	17	4.8 Conclusions	82
1.9 Burning Fossil Fuels	19	Questions	82
1.10 Conclusions	19		
Questions	20	5	
2		Air Pollution	89
Reducing Pollution to Reduce Risk	26	5.1 Introduction to Criteria Air Pollutants	90
2.1 Chemical Risk Assessment	27	5.2 Volatile Organic Compounds	102
2.2 Comparative Risk Assessment	27	5.3 Hazardous Air Pollutants	103
2.3 Complex Risk Assessment	29	5.4 Air Pollution's Major Impact on Global Health	106
2.4 Using Legislation to Reduce Risk	29	5.5 Atmospheric Brown Clouds	107
2.5 A Right-To-Know Law	31	5.6 Sand and Dust Storms	108
2.6 Using the Waste Hierarchy to Reduce Risk	33	5.7 Conclusions	111
2.7 Going Beyond Pollution Prevention	37	Questions	111
2.8 Conclusions	38	Appendix: Particulates and Disease	113
Questions	38	6	
3		Acid Deposition	119
Chemical Toxicity	42	6.1 Background	120
3.1 Terminology	43	6.2 Pollutants of Concern	122
3.2 How Dose Affects Response	44	6.3 Adverse Impacts of Acidic Deposition	123
3.3 Absorption, Distribution, Biotransformation, and Excretion	46	6.4 Sources of Acid Deposition	125
3.4 Factors Affecting Toxicity	47	6.5 Reducing Emissions of Acid-Precursor Chemicals	125
3.5 Environmental Hormones (Endocrine Disruptors)	51	6.6 Recovering from Acidic Deposition	126
3.6 Cancer	54	6.7 Acid Deposition in Asia	127
3.7 Epigenetics and Disease	57	6.8 Conclusions	129
3.8 How Toxicants Affect Specific Organs	57	Questions	129

7

Global Warming and Ocean Acidification	133
7.1 Introduction	134
7.2 Greenhouse Gases	135
7.3 Carbon Dioxide	136
7.4 Methane	139
7.5 Ground-Level Ozone	141
7.6 Nitrous Oxide	142
7.7 Halogen Gases	142
7.8 Water Vapor	142
7.9 Aerosols	142
7.10 Black Carbon (Soot): An Aerosol	144
7.11 Solar Geoengineering Using Aerosols?	145
7.12 Impacts of Global Warming	145
7.13 Ocean Acidification: An Impact Specific to Carbon Dioxide	149
7.14 Adaptation to a Greenhouse World	152
7.15 Reducing GHG Emissions	154
7.16 Solutions to Global Warming	157
7.17 Conclusions	157
Questions	158

8

Energy and Pollution	166
8.1 Pollution in Motor Vehicle Use	168
8.2 Is Clean Coal Possible?	169
8.3 Conservation and Efficiency	171
8.4 Increasing Industrial Efficiency in Using Energy	172
8.5 Using Waste Heat to Increase Industrial Efficiency	173
8.6 Renewable Energy: Photovoltaics	174
8.7 Renewable Energy: Wind Power	177
8.8 Renewable Energy and the Electric Grid	178
8.9 Renewable Energy Use Around the World	179
8.10 End-Of-Life Management of Solar Cells, Wind Turbines, and Batteries	180
8.11 Briefs on Other Energies	181
8.12 Conclusions	184
Questions	186

9

Stratospheric Ozone Depletion	192
9.1 Background	193
9.2 Pollutants of Concern: CFCs and Halons	194
9.3 Chemical Reactions in the Stratosphere	195
9.4 UV Radiation at Earth's Surface	198
9.5 The Montreal Protocol	200
9.6 Problems, Ongoing Research, and Cheating	201
9.7 Conclusions	203
Questions	203

10

Water Pollution	206
10.1 Point and Nonpoint Water Pollution	207
10.2 Pollutants of Concern: Conventional Water Pollutants	208
10.3 Priority Pollutants	211
10.4 Nonconventional Pollutants	212
10.5 Pollution of Groundwater	212
10.6 Pollution in Other Water Bodies	214
10.7 Reducing Point Sources of Pollution	216
10.8 Reducing Nonpoint Sources of Pollution	221
10.9 Confronting Reactive Nitrogen: The Nitrogen Glut	224
10.10 Falling Levels of Oxygen in the Ocean	229
10.11 Phosphorus Pollution	231
10.12 Conclusions	234
Questions	235

11

Drinking Water Pollution	242
11.1 Primary Drinking Water Standards	243
11.2 An Ongoing Mass Poisoning: Arsenic	247
11.3 Lead in Drinking Water	249
11.4 Secondary Drinking Water Contaminants	251
11.5 Other Drinking Water Issues	252
11.6 Pathogens and Human Health	254
11.7 Home Water Treatments	257
11.8 Waste and Wastewater as Valuable Resources	258
11.9 Conclusions	259
Questions	260

12

Solid Waste	265
12.1 Generating Large Amounts of Waste	266
12.2 Using the Waste Management Hierarchy to Reduce MSW	268
12.3 Recycling	273
12.4 Incineration and Landfilling	279
12.5 When Waste Problems Seem Too Large to Follow the WMH	282
12.6 Plastic Presents Mammoth Problems	283
12.7 Plastics: Improving P ² and Recycling	289
12.8 Conclusions	290
Questions	291

13

Hazardous Waste	297
13.1 Introduction to Hazardous Waste	298
13.2 The Waste Management Hierarchy in HW Management	299

13.3	The Coming of Superfund	301	16.10	Reducing Pesticide Risk	365
13.4	Evaluating HW and Superfund Sites	304	16.11	Reducing Risk by Alternative Approaches to Agriculture	366
13.5	Dealing with and Cleaning Up HW Sites	305	16.12	France's Extraordinary Efforts to Reduce Pesticide Use	368
13.6	Reducing the Risk of HW Internationally	308	16.13	Conclusions	369
13.7	The Problem of Electronic Waste: E-Waste	309		Questions	369
13.8	Conclusions	311		Appendix: Biopesticides	371
	Questions	312			
14			17		
	Persistent, Bioaccumulative, and Toxic Chemicals	316		Indoor Air Pollution	376
14.1	Why PBTs Are of Concern	317	17.1	Indoor Air Contaminants	377
14.2	The Stockholm Convention: Reducing POPs	319	17.2	Combustion Pollutants	379
14.3	Examining One POP Family: The PCBs	321	17.3	VOCs, Moisture, Biological Pollutants, Dust, and Dirt	380
14.4	A Polybrominated POP Family: PBDEs	322	17.4	Ionizing Radiation: Radon	383
14.5	A Polyfluorinated Family: PFAS	323	17.5	Indoor Air Pollution in Less-Developed Countries	386
14.6	Conclusions	323	17.6	Household Hazardous Products	387
	Questions	324	17.7	Household Hazardous Waste	389
			17.8	Conclusions	390
				Questions	391
15			18		
	Metals	327		Zero Waste, Zero Emissions	395
15.1	Metals: An Introduction	328	18.1	Sustainable Development	396
15.2	Sources of Metal Pollution	329	18.2	Building a Circular Economy	396
15.3	Lead: A PBT Metal	334	18.3	Industrial Ecology	400
15.4	Mercury	337	18.4	Closed-Loop Systems	400
15.5	Cadmium	343	18.5	Zero Waste	401
15.6	Arsenic	344	18.6	Lifecycle Assessment	404
15.7	Conclusions	345	18.7	Design for the Environment	406
	Questions	346	18.8	Product Stewardship and EPR	407
			18.9	Servicizing	408
			18.10	Green Chemistry and How It Works	409
			18.11	Converting Wastes into Resources	411
			18.12	Safely Operating within Earth's Life-Support Boundaries	411
			18.13	Conclusions	412
				Questions	412
16				Appendix: Basic Concepts in Chemistry	418
	Pesticides	353	A.1	Atoms and the Periodic Table	418
16.1	Why Use Pesticides and Who Uses Pesticides	354	A.2	Organic and Inorganic Chemicals	423
16.2	Pesticide Categories	355	A.3	Free Radicals	424
16.3	An Introduction to Insecticides	356	A.4	Oxidation and Reduction Reactions	424
16.4	The Neonicotinoids	357	A.5	Acid Pollution	426
16.5	Herbicides Kill Unwanted Plants – Weeds	359		Further Reading	431
16.6	Pesticide Movement and Contamination of the Environment and Food	361		Index	439
16.7	Pesticide Resistance	362			
16.8	Biodiversity at High Risk, but Causes Go Beyond Pesticides	362			
16.9	Pesticide Use in Less-Developed Countries	364
