

Psychopathology

Carter's *Psychopathology* is an accessible, engaging, and well-organized text covering the study, understanding, diagnosis, treatment, and prevention of psychological disorders. Fully integrating gender and culture in the presentation of mental disorders, and using sensitive and inclusive language to encourage an empathic approach to psychopathology, this introductory textbook offers students a strong foundation of the socio-cultural factors influencing how we treat mental disorders. Featuring boxes such as “the power of words,” promoting the use of respectful, empathic language, and “the power of evidence,” demonstrating that scientific evidence can answer questions about psychopathology treatments; real-world case studies and examples; “concept checks” questions to test the student’s mastery of the material covered in each section; chapter summaries listing the “take-home” points discussed; and key terms and glossary highlighting terms that students will need to understand and become familiar with, this textbook provides a hands-on approach to the study of psychopathology.

KENNETH CARTER is Charles Howard Candler Professor of Psychology and interim Dean at Oxford College of Emory University, where he teaches introductory courses in psychopathology as well as advanced courses in clinical psychopharmacology, research methods, and personality. Before joining the Oxford College faculty in 1994, Carter served as a senior assistant research scientist in the Centers for Disease Control and Prevention’s prestigious Epidemic Intelligence Service, with a research focus on smoking as a risk marker for suicidal behaviors in adolescents. He has published extensively in both academic and lay publications, actively engaging in the translation of research in psychology into everyday language. His articles have been published in magazines such as *Psychology Today* and *Women’s Health*, and he has appeared on programs such as *CNN Tonight* and NBC’s *Today* show and hosted NBC’s *Mind of a Motorhead*. His most recent book is *Buzz! Inside the Minds of Thrill-Seekers, Daredevils, and Adrenaline Junkies* (Cambridge University Press, 2019).

Figures

1.1	King George III.	page 2
1.2	New Orleans jazz funerals demonstrate that cultural norms affect the way we express grief.	6
1.3	Although undoubtedly painful, the ancient treatment of drilling holes in the skull (trephination) was not fatal.	9
1.4	The word <i>lunatic</i> is linked to the idea that the moon affects our personality.	10
1.5	An accused witch going through the judgment trial, where she is dunked in water to prove her guilt or innocence of practicing witchcraft.	11
1.6	Restraint bed used in early mental hospitals.	12
1.7	La Bicêtre, a French facility for men that undertook reforms in treatment of psychological disorders in the early 1800s.	14
1.8	US reformer Dorothea Lynde Dix (1802–1887) advocated for moral treatment of patients in receiving psychiatric care.	14
1.9	Psychiatric patients in an asylum sleeping area, <i>circa</i> 1900.	15
1.10	Massachusetts' experience is an example of the dramatic decline in inpatient beds.	17
1.11	Types of psychological training programs in the United States.	19
1.12	A number of professionals provide treatment for psychological conditions in the United States.	19
1.13	Specialists may prescribe medication for psychological conditions in the United States.	19
1.14	Primary care professionals often prescribe medication for psychological conditions.	20
1.15	Correlation coefficients show the relationship between variables such as a positive correlation and negative correlation.	23
1.16	Experiments can be carried out to understand the link between variables such as self-esteem and depression.	24
1.17	The prevalence of a condition is influenced by incidence, recovery, and mortality, as depicted here in the “epidemiologist’s bathtub.”	26
2.1	The nervous system is organized into the central and the peripheral nervous systems.	33
2.2	The occipital, frontal, temporal, and parietal lobes are important brain areas in psychopathology.	34
2.3	A typical human brain cell (a neuron).	35
2.4	The synapse consists of three structures: the axon terminal, the synaptic gap, and the dendrite.	36
2.5	Major endocrine glands include the adrenal glands. The endocrine system can communicate over long distances in the body.	38
2.6	MZ twins come from one egg and one sperm cell, while DZ twins come from two eggs and two sperm.	40

2.7	Thanks to twin studies, we know that many psychological conditions show evidence of heritability.	41
2.8	Transcranial magnetic stimulation (TMS) uses magnetic fields to treat psychological conditions.	43
2.9	Iceberg metaphor of Freud's theory of personality.	45
2.10	Classical conditioning might be able to explain why some people flinch when there is lightning.	55
2.11	Virtual reality therapy can help some clients overcome their fears, such as fear of heights, in a simulated environment.	56
2.12	Couples therapy is a systems approach that can help to change ways that couples relate to each other.	63
2.13	The multiperspective approach.	66
2.14	How therapists describe their theoretical orientation.	66
3.1	Francis Willis was a physician and clergyman who was in charge of the treatment of King George III.	71
3.2	Some psychologists use genograms (family trees) to look for patterns in family relationships.	74
3.3	Although controversial, projective tests are sometimes used by psychodynamic therapists to uncover unconscious information.	76
3.4	A polygraph uses physiological measurements such as galvanic skin response.	78
3.5	Smartphones and smartwatches make self-monitoring tasks much easier.	79
3.6	The Cube Rule is a classification system for sandwiches.	83
3.7	The classical categorical, dimensional, and prototypical approaches compared.	85
3.8	Saint Elizabeth's Hospital in Washington DC was one of the sites of the Rosenhan study.	87
3.9	Evolution of <i>DSM</i> .	88
3.10	Many effective therapies have a few factors in common.	93
4.1	Sara Benincasa.	98
4.2	The fight, flee, or freeze response is a response to danger or stressful situations.	99
4.3	Specific phobias of snakes are common, but many snakes, such as this common garter, can be quite harmless.	101
4.4	Prevalence of specific phobia subtypes in the United States (2017).	101
4.5	Lifetime prevalence of specific phobia in the World Mental Health Surveys (2002–2017).	102
4.6	Some people with social anxiety disorders experience fairly specific fears, such as fear of public speaking.	103
4.7	Many people with social anxiety disorder have reported earlier episodes of bullying as children.	104
4.8	Lifetime prevalence of social anxiety disorder in the World Mental Health Surveys (2002–2017).	104
4.9	Lifetime prevalence of agoraphobia in the World Mental Health Surveys (2002–2017).	106
4.10	Lavender has been used for centuries to calm and relax.	107
4.11	Despite performing on stage in front of thousands of people, singer Adele has reported anxiety and described herself as a “walking panic attack.”	111
4.12	Lifetime prevalence of panic disorder in the World Mental Health Surveys (2002–2017).	113

4.13	Areas of the brain involved in panic disorder include the amygdala, hypothalamus, hippocampus, and locus coeruleus.	113
4.14	For people with generalized anxiety disorder, anxiety can create a feedback loop to more anxiety.	117
4.15	Lifetime prevalence of generalized anxiety disorder in the World Mental Health Surveys (2002–2017).	118
4.16	Parents who are hovering and controlling may create an environment in which children don't gain a sense of control over their own environments.	120
4.17	The increased alertness or hypervigilance that often accompanies anxiety can also reinforce worry.	121
4.18	Obsessions of contamination often have compulsions that follow a similar theme, such as handwashing.	124
4.19	Percentages of people with BDD who have a concern with this part of the body.	126
4.20	People with hoarding disorder don't just clutter up rooms; their disorder renders the rooms useless for their original function.	127
4.21	Excoriation is a condition in which a person picks at their skin to the point where it causes a wound.	128
4.22	The anterior cingulate cortex is useful in letting us know when we've gotten something wrong.	129
4.23	Do images of women and men in magazines set unrealistic cultural expectations of body image?	131
4.24	The symptoms of the fight, flee, or freeze response, which is one characteristic of every condition in which we see anxiety.	132
5.1	Emotional or behavioral problems that are connected to a specific event are sometimes considered symptoms of an adjustment disorder.	139
5.2	Natural disasters such as Hurricane Maria are the kinds of traumatic events that can cause symptoms of PTSD.	143
5.3	While watching a horror film might meet some of the criteria of exposure to trauma, looking at media images doesn't count as trauma unless your work requires you to view such images.	144
5.4	Prevalence of exposure to any traumatic event in a survey of 24 countries.	145
5.5	Nurses at the Sir William Hospital using experimental medical equipment on soldiers experiencing shell shock.	146
5.6	Several chemical and biological changes can be influenced by exposure to trauma.	149
5.7	The medial prefrontal cortex plays a role in inhibiting the amygdala which in turn affects the way we respond to emotions.	150
5.8	Methylation is a process that can either activate or repress gene expression.	151
5.9	The psychodynamic model suggests that clients may seek out ways to repeat trauma without even being aware of it.	152
5.10	The CBT framework (A) suggests an interaction between the way we think, feel, and behave. In those with PTSD, maladaptive thoughts such as "I am in danger" when there is no danger can produce feelings of anxiety and cause the person to avoid non-dangerous situations (B). One goal of PTSD is to facilitate change in thoughts, which should also change behaviors and feelings (C).	154

5.11	A CBT worksheet for helping clients develop more adaptive responses about their role in traumatic events.	155
5.12	US lifetime prevalence of PTSD by race, 2011.	156
5.13	Example of racial trauma within the framework of the <i>DSM</i> .	157
5.14	Eye movement desensitization and reprocessing (EMDR) might be an effective treatment for PTSD.	159
5.15	Herschel Walker, a former National Football League player who played with the Cowboys, Vikings, Phillies, and Giants and won the 1982 Heisman trophy.	161
5.16	Symptoms of PTSD.	166
6.1	Andy Behrman.	172
6.2	People with symptoms of mania often describe feeling “better than good.”	175
6.3	Mood episodes can range from severe depressive episodes to severe manic episodes.	176
6.4	Mood disorders are different from the ups and downs of daily living.	177
6.5	Prevalence of depressive disorders around the world, 2017, by share of the population.	179
6.6	Lifetime prevalence of major depressive disorder in the World Mental Health Surveys, selected countries (2002–2017).	180
6.7	Meta-analytic estimates of age of onset of depressive disorders.	181
6.8	Lifetime prevalence of bipolar I disorder in the World Mental Health Surveys, selected countries (2002–2017).	186
6.9	The anterior cingulate cortex helps to process the body’s reaction to stress and emotional expression. The hippocampus is involved in processing new memories, including fear-related learning, while the amygdala is associated with emotions such as fear and anger and the prefrontal cortex processes motivational responses.	191
6.10	Overactivity of the hypothalamic pituitary adrenal (HPA) axis has been implicated in depression.	192
6.11	Certain foods can be a problematic choice for those on MAOIs.	194
6.12	SSRIs increase the availability of serotonin to the serotonin receptor sites in the synapse.	195
6.13	Patient undergoing ECT in which seizures are electrically induced in anesthetized patients for therapeutic effect.	198
6.14	Transcranial magnetic stimulation uses electromagnetic coils to deliver a painless electromagnetic pulse.	199
6.15	Vagus nerve stimulation (VNS) is a treatment for depressive disorders.	200
6.16	Family and couples therapy attempts to change the way individuals in a group relate to one another.	206
6.17	The depressive and bipolar chapters of <i>DSM-5tr</i> can be challenging.	208
7.1	Jennifer Traig.	214
7.2	Whether intentionally or unintentionally, health care providers may respond to patients’ pain differently depending on patients’ identity.	215
7.3	While actual physical damage would cause numbness along the entire arm (A), in functional neurological symptom disorder (conversion disorder) (B) only the hand is numb.	220
7.4	Problem vs. emotion coping strategies.	226
7.5	Health is at the nexus of biology, psychology, and social factors.	226
7.6	The 13 actual leading causes of death compared to internet searches and media coverage (2016).	228

7.7	Stages of sleep.	231
7.8	Melatonin is a hormone that affects the modulation of sleep patterns in both seasonal and circadian rhythms.	233
7.9	Prevalence of any sleep disorder.	235
7.10	Polysomnography is a sleep-lab study of the physiological activity of the body during sleep.	235
7.11	Sleep apps on devices such as smartphones and watches can track some useful data during sleep.	236
7.12	In adults, sleep apnea is commonly caused by excess weight.	240
7.13	Global prevalence of sleep apnea.	241
7.14	The percentage of sleep paralysis study participants who reported frequently or always experiencing various symptoms at any point in their lives.	244
7.15	Mike Birbiglia.	246
7.16	CPAP treatments can be helpful for sleep.	247
7.17	Diagnosing unexplained health symptoms or complaints.	249
8.1	Jazz Jennings.	254
8.2	Although often considered celebrations to announce the gender of their children, gender reveal parties don't actually reveal much about gender.	255
8.3	Nametags and email signatures often contain gender pronouns.	258
8.4	Transgender awareness has increased, due in part to the visibility of TGNC people such as actor Elliot Page and Laverne Cox.	260
8.5	Prevalence of erectile disorder by age.	267
8.6	While alcohol abuse can cause sexual performance problems, these are separate from the problems caused by psychological disorders.	270
8.7	Sensate focus is a technique in which couples are encouraged to explore arousal without a focus on orgasm.	272
8.8	Percentage of people in Quebec wishing to experience certain paraphilia behaviors, 2017.	273
8.9	Drag performers such as Bob the Drag Queen are engaged in performance art.	275
8.10	Sportscaster and television host Erin Andrews.	278
8.11	Sexual sadism and sexual masochism behavior have been the subject of books and films.	279
8.12	The Gender Unicorn.	284
9.1	Stephanie Covington Armstrong.	290
9.2	Share of world population with an eating disorder, 2017.	291
9.3	The underweight range, according to the body mass index (BMI).	292
9.4	Lifetime prevalence of binge-eating disorder in the World Mental Health Surveys, selected countries (2002–2017).	295
9.5	Russell's sign is a callus caused by repeatedly using the fingers to induce vomiting.	297
9.6	The cycle of bulimia.	298
9.7	Lifetime prevalence of bulimia nervosa in the World Mental Health Surveys, selected countries (2002–2017).	299
9.8	Tom Daley.	303
9.9	Physical effects of anorexia nervosa, bulimia nervosa, and binge-eating disorder.	303
9.10	Concordance rate of anorexia nervosa and bulimia in monozygotic (identical) and dizygotic (fraternal) twins.	305

9.11	The hypothalamus contains the lateral hypothalamus and the ventromedial hypothalamus, which are responsible for triggering our feelings of hunger and fullness.	307
9.12	Can social media impact eating disorders?	310
10.1	Some people will break property when they are frustrated, but those with intermittent explosive disorder have difficulty controlling their anger and some feel angry all the time.	321
10.2	Lifetime prevalence of intermittent explosive disorder in selected countries, from the World Mental Health Surveys (2002–2017).	322
10.3	When people consistently steal items they don't need, it is a symptom of kleptomania according to the <i>DSM-5tr</i> .	322
10.4	People with pyromania can't resist the impulse to start fires despite the devastating impact their actions can create.	324
10.5	Lifetime prevalence of oppositional defiant disorder in selected countries, from the World Mental Health Surveys (2002–2017).	328
10.6	Lifetime prevalence of conduct disorder in selected countries, from the World Mental Health Surveys (2002–2017).	331
10.7	Violent video games are popular with kids, but do they create violent kids?	332
11.1	Demi Lovato.	340
11.2	Number of people using psychoactive drugs in the United States (2018).	341
11.3	Criteria for substance use disorders.	342
11.4	Buzz Aldrin.	346
11.5	Lifetime prevalence of alcohol disorders in selected countries, from the World Mental Health Surveys (2002–2017).	347
11.6	Until 1903, Coca-Cola contained small amounts of cocaine.	353
11.7	Three waves of the rise in opioid overdose deaths.	357
11.8	Anthony Kiedis.	358
11.9	Employees pack and label jars of green buds at the Oakland, CA location of NUG, a cannabis dispensary.	359
11.10	Those with gambling disorder are more likely to try to make up for lost winnings than people without gambling disorder.	366
11.11	Multiperspective models of substance use disorders consider the effects of social, psychological, and biological contributing factors.	370
12.1	The three categories or clusters of personality disorders.	381
12.2	Lifetime prevalence of Cluster A personality disorders in selected countries, from the World Mental Health Surveys (2002–2017).	383
12.3	Bullying can be a key feature in antisocial personality disorder.	389
12.4	Are shy people antisocial?	390
12.5	People with histrionic personality disorder have attention seeking behavior.	394
12.6	Lifetime prevalence of Cluster B personality disorders in selected countries, from the World Mental Health Surveys (2002–2017).	395
12.7	Dr. James Fallon.	397
12.8	Ian Brady.	403
12.9	Lifetime prevalence of Cluster C personality disorders in selected countries, from the World Mental Health Surveys (2002–2017).	404

13.1	In the residual phase, people still have symptoms but they aren't as intense as in the active phase.	420
13.2	Share of population diagnosed with schizophrenia 2019.	421
13.3	Schizoaffective disorder differs from a mood disorder with psychotic features.	425
13.4	Lori Schiller.	426
13.5	A person's percentage of risk of developing schizophrenia varies based on their relationship to another person with the disorder.	429
13.6	MRI scans of a twin without schizophrenia and a twin with schizophrenia show differences in the size of the ventricles.	429
13.7	a and b Cognitive-behavioral therapy for psychosis aims to reduce the distress associated with hallucinations.	433
13.8	Many symptoms are associated with psychosis.	436
14.1	Jessica McCabe.	442
14.2	Presentations of ADHD include combined presentation, predominantly inattentive, and predominantly hyperactive/impulsive presentation.	445
14.3	Lifetime prevalence of ADHD in selected countries, from the World Mental Health Surveys (2002–2017).	446
14.4	The prefrontal cortex, striatum, and cerebellum are key brain areas associated with ADHD.	446
14.5	This PET scan shows that subjects with ADHD have lower levels of dopamine transporters in the nucleus accumbens than control subjects.	447
14.6	This rainbow infinity image is one of the symbols for autism spectrum disorder and neurodiversity pride.	449
14.7	Prevalence of autism spectrum disorder worldwide, 2017.	453
14.8	The prevalence of autism spectrum disorder is higher for those who are more closely related.	454
14.9	For those requiring very substantial support, communication boards may be helpful.	455
14.10	Are vaccines related to autism?	457
14.11	Share of world population with intellectual developmental disorder, 2018.	461
14.12	In Fragile X syndrome, the X chromosome looks as if it is hanging by a fragile thread.	462
14.13	Percentage of people who have experienced symptoms of delirium.	467
14.14	The percentage of people with Alzheimer's disease increases with age.	472
14.15	Specific brain changes associated with Alzheimer's disease.	473
14.16	Worldwide death rate of Alzheimer's disease and other dementias in selected countries, 2017.	474
14.17	B. Smith was photographed for <i>People</i> magazine on December 20, 2015 in Sag Harbor, New York.	475
14.18	Three years later, B. Smith napped on the shoulder of her daughter, Dana Gasby, as she and her family grappled with Alzheimer's disease.	474
14.19	Forensic pathologist and neuropathologist Dr. Bennet Omalu.	478
14.20	Smart homes and other technologies can assist people with symptoms of neurocognitive disorders and help them stay in their homes longer.	480
15.1	Daniel M'Naghten was at the center of the 1843 case that set standards for the insanity defense in what came to be known as the M'Naghten Rule.	488

15.2	Involuntary hospitalization rates for schizophrenia around the world.	489
15.3	Process of civil commitment.	491
15.4	An example of the competence process.	493
15.5	John Hinckley, Jr. spent 35 years in a mental institution after he was found not guilty by reason of insanity for shooting President Ronald Reagan.	498
15.6	The public's perception of the prevalence of the insanity defense is not the same as the actual occurrence.	498
15.7	John Hinckley, Jr., arrives home in the gated Kingsmill community in Williamsburg, VA.	499
15.8	The insanity defense among the states.	501
15.9	Some states have codified duties to warn, though duty to warn laws vary from state to state.	505
15.10	The criteria for the insanity defense have changed over time.	507
