

Index

- additive smoothing, 22
- architecture, 31
- backward algorithm, 40
- Baum's identity, 85, 132
- canonical process, 5, 23
- CG site, 164
- chromosome, 161
- codon, 162
- CpG site, 164
- decoding, 30, 49, 55
- Derin's formula, 85, 134
- direct product, 25
- DNA, 161
- EM algorithm, 60
- emission matrix, 32
- emission probability, 30
 - matrix, 30
- estimation, 3, 31
- eukaryote, 163
- event, 5
- expectation, 7
- expectation step, 66
- filter, 46, 50, 119
- filtration, 5
- forward algorithm, 39
- genetic code, 162
- genome, 161
- hidden Markov model, HMM, 29, 30
- hidden semi-Markov model, 116
- homogeneous, 2
- homogeneous SM–M0 model, 117
- homogeneous SM–M1 model, 117
- homogeneous SM–Mk model, 117
- independent, identically distributed, iid,
 - 7
- initial probability, 3
- Kronecker product, 25
- Laplace smoothing, 22
- likelihood, 18, 24, 38
- likelihood function, 35
- lumping, 167
- M0 model, 2
- M1 model, 2
- mark, 97
- mark space, 97
- marked point process, 97
- Markov chain, 1
 - order M , 25
 - time-homogeneous, 6
- Markov chain model
 - observed, 2
- Maximal-a-Posteriori, MAP, 128
- maximization step, 66
- maximum likelihood estimator, 63
- Mendelian inheritance, 161
- Mq model, 2
- MTD(k) models, 166
- polypeptide, 161
- probability function, 5
- prokaryote, 163
- pseudo-log-likelihood, 64, 90
- reference model, 6
- reference probability, 75
- renewal process, 110
- renewal sequence process, 105
- RNA, 161
- sample space, 4

scoring, 30
semi-Markov chain, 97
semi-Markov process, 98
semi-martingale decomposition, 17
semi-martingale representation, 15, 112
 σ -algebra, 4
smoother, 46, 51, 55, 58, 81, 128
transcription, 161
transition probability, 2
translation, 161
virtual change of state, 106
Viterbi algorithm, 49, 55, 87, 125
Viterbi decoding, 58
