

A Stata Companion for the Third Edition of The Fundamentals of Political Science Research

A Stata Companion for the Third Edition of The Fundamentals of Political Science Research offers students a chance to delve into the world of Stata using real political data sets and statistical analysis techniques directly from Paul M. Kellstedt and Guy D. Whitten's best-selling textbook.

Built in parallel with the main text, this workbook teaches students to apply the techniques they learn in each chapter by reproducing the analyses and results from each lesson using Stata. Students will also learn to create all of the tables and figures found in the textbook, leading to an even greater mastery of the core material.

This accessible, informative, and engaging companion walks through the use of Stata step-by-step, using command lines and screenshots to demonstrate proper use of the software. With the help of these guides, students will become comfortable creating, editing, and using data sets in Stata to produce original statistical analyses for evaluating causal claims. End-of-chapter exercises encourage this innovation by asking students to formulate and evaluate their own hypotheses.

Paul M. Kellstedt is Professor of Political Science at Texas A & M University. He is the author of *The Mass Media and the Dynamics of Racial Attitudes* (Cambridge, 2003), winner of Harvard University's John F. Kennedy School of Government's 2004 Goldsmith Book Prize. In addition, he has published numerous articles in a variety of leading journals. He is the Editor-in-chief of *Political Science Research and Methods*, the flagship journal of the European Political Science Association.

Guy D. Whitten is Cullen-McFadden Professor of Political Science, as well as Director of the European Union Center, at Texas A & M University. He has published a variety of articles in leading peer-reviewed journals. He is on the editorial boards of the *American Journal of Political Science*, *Electoral Studies*, and *Political Science Research and Methods*.

2	The Art of Theory Building	10
3	Evaluating Causal Relationships	19
4	Research Design	22
5	Measuring Concepts of Interest	24
6	Getting to Know Your Data	27
7	Probability and Statistical Inference	36
8	Bivariate Hypothesis Testing	49
9	Two-Variable Regression Models	58
10	Multiple Regression: the Basics	63
11	Multiple Regression Model Specification	67
12	Limited Dependent Variables and Time-Series Data	76
	<i>Bibliography</i>	89
	<i>Index</i>	91

CONTENTS

	<i>Preface</i>	<i>page xi</i>
	<i>Figures</i>	<i>xiii</i>
1	The Scientific Study of Politics	1
	1.1 Overview	1
	1.2 “A Workbook? Why Is There a Workbook?”	1
	1.3 Getting Started with Stata	2
	1.3.1 Launching Stata	2
	1.3.2 Getting Stata to Do Things	3
	1.3.3 Initially Examining Data in Stata	8
	1.4 Exercises	8
2	The Art of Theory Building	10
	2.1 Overview	10
	2.2 Examining Variation Across Time and Across Space	10
	2.2.1 Producing a Bar Graph for Examining Cross-Section Variation	10
	2.2.2 Producing a Connected Plot for Examining Time-Series Variation	13
	2.3 Using Google Scholar to Search the Literature Effectively	14
	2.4 Wrapping Up	17
	2.5 Exercises	18
3	Evaluating Causal Relationships	19
	3.1 Overview	19
	3.2 Exercises	19
4	Research Design	22
	4.1 Overview	22
	4.2 Exercises	22
5	Measuring Concepts of Interest	24
	5.1 Overview	24
	5.2 Exercises	24

6	Getting to Know Your Data	27
	6.1 Overview	27
	6.2 Describing Categorical and Ordinal Variables	27
	6.3 Describing Continuous Variables	30
	6.4 Putting Statistical Output into Tables, Documents, and Presentations	33
	6.5 Exercises	34
7	Probability and Statistical Inference	36
	7.1 Overview	36
	7.2 Dice Rolling in Stata	36
	7.3 Dice Rolling in Excel	42
	7.4 Exercises	47
8	Bivariate Hypothesis Testing	49
	8.1 Overview	49
	8.2 Tabular Analysis	49
	8.2.1 Generating Test Statistics	50
	8.2.2 Putting Tabular Results into Papers	51
	8.3 Difference of Means	52
	8.3.1 Examining Differences Graphically	52
	8.3.2 Generating Test Statistics	53
	8.4 Correlation Coefficients	53
	8.4.1 Producing Scatter Plots	53
	8.4.2 Generating Covariance Tables and Test Statistics	54
	8.5 Exercises	56
9	Two-Variable Regression Models	58
	9.1 Overview	58
	9.2 Estimating a Two-Variable Regression	58
	9.3 Graphing a Two-Variable Regression	58
	9.4 Exercises	62
10	Multiple Regression: the Basics	63
	10.1 Overview	63
	10.2 Estimating a Multiple Regression	63
	10.3 From Regression Output to Table – Making Only One Type of Comparison	63
	10.3.1 Comparing Models with the Same Sample of Data, but Different Specifications	64
	10.3.2 Comparing Models with the Same Specification, but Different Samples of Data	65
	10.4 Standardized Coefficients	65
	10.5 Exercises	66

CONTENTS ix

11	Multiple Regression Model Specification	67
	11.1 Overview	67
	11.2 Dummy Variables	67
	11.2.1 Creating a Dummy Variable with the “generate” and “replace” Commands	67
	11.2.2 Estimating a Multiple Regression Model with a Single Dummy Independent Variable	69
	11.2.3 Estimating a Multiple Regression Model with Multiple Dummy Independent Variables	70
	11.3 Dummy Variables in Interactions	70
	11.4 Post-Estimation Diagnostics in Stata for OLS	72
	11.4.1 Identifying Outliers and Influential Cases in OLS	72
	11.5 Exercises	74
12	Limited Dependent Variables and Time-Series Data	76
	12.1 Overview	76
	12.2 Models with Dummy Dependent Variables	76
	12.3 Being Careful with Time-Series Data	80
	12.3.1 Setting Up a Time-Series Data Set in Stata	81
	12.3.2 Lag and Difference Operators in Stata	84
	12.3.3 Performing Time-Series Regression Analyses in Stata	85
	12.4 Exercises	87
	<i>Bibliography</i>	89
	<i>Index</i>	91

PREFACE

We received a wealth of useful feedback from instructors and students about the first two editions of *The Fundamentals of Political Science Research*. In response to feedback on the first edition, we substantially increased the number of end-of-chapter exercises in the second edition. While the response to this increase was positive, we sensed a demand for even more exercises and, in particular, more hands-on material for how to put the techniques that we discuss in the book into action. This workbook is our attempt to meet these demands. It is one of three workbooks, each written to help students to work with the materials covered in the third edition of *The Fundamentals of Political Science Research* using a particular piece of statistical software.

This workbook focuses on using the program Stata. Our expectation is that the modal user of this book will be using a relatively recent version of Stata on a computer that is running some version of the Windows operating system. We also have made an effort to accommodate users who are using some version of macOS or OS X. A webpage available at www.cambridge.org/fpsr will help Mac users with any difficulties.

The chapter structure of this workbook mirrors the chapter structure of the third edition of *The Fundamentals of Political Science Research*. We have written with the expectation that students will read the chapters of this companion after they have read the chapters of the book.

We continue to update both the general and instructor-only sections of the webpage for our book (www.cambridge.org/fpsr). As before, the general section contains data sets available in formats compatible with SPSS, Stata, and R. The instructor-only section contains several additional resources, including PowerPoint and TeX/Beamer slides for each chapter, a test-bank, and answer keys for the exercises.

FIGURES

1.1	Stata after initial launch with update options box	<i>page</i> 3
1.2	Stata initial launch	4
1.3	Stata with pull-down menu for “File” selected	4
1.4	Stata with directory open	5
1.5	Stata with data loaded in	6
1.6	Opening a new do-file window	7
1.7	Executing a command from a do-file editor	8
1.8	Initially examining data in Stata	9
2.1	Initial bar graph of military spending	11
2.2	Initial bar graph of military spending with angled labels	12
2.3	The Google Scholar home page	15
2.4	Google Scholar results for “Ray Fair economic voting” search	15
2.5	Google Scholar search results of articles citing Ray Fair (1978) article	17
6.1	Raw output from “tabulate” command	28
6.2	Initial pie graph	29
6.3	Initial bar graph	30
6.4	Output from the “summarize” command	32
6.5	Initial figure combining a histogram and kernel density plot for incumbent vote	33
7.1	Search results for Stata’s Dice program	37
7.2	Scrolling down in the search results for Stata’s Dice program	37
7.3	Installing Stata’s Dice program	38
7.4	The results of 300 rolls of a six-sided die	38
7.5	Accessing the results of our dice rolls in Stata	39
7.6	The data editor, with the results of our dice rolls in Stata	40
7.7	Summarizing the results of our dice rolls in Stata	40
7.8	The results of 300 rolls of two six-sided dice	41
7.9	The dice roller in Excel	42
7.10	The results of our first roll	43
7.11	The results of our first ten rolls	44
7.12	The results of our first 100 rolls	44
7.13	How to calculate the average of our first 100 rolls of die 1	45
7.14	The result of calculating the average of our first 100 rolls of die 1	46
7.15	The result of calculating the average of our first 100 rolls of die 2	46

7.16	The result of calculating the average of our first 100 rolls of the sum of dice 1 and 2	47
8.1	Raw output from “tab2” command	50
8.2	Raw output from “tab2” command	51
8.3	Raw output from “ttest” command	54
8.4	Basic output from “scatter” command	55
8.5	Basic output from “correlate” command with the “covariance” option	55
8.6	Basic output from “pwcorr” command with the “sig” option	56
9.1	Basic output from the “twoway lfit” command	59
9.2	Output from the “twoway lfit” command together with “twoway scatter”	60
9.3	Output from the “twoway lfit” command together with “twoway scatter” and “mean” lines	61
10.1	Basic output from a multiple regression	64
10.2	Basic output from a multiple regression with the “beta” option	66
11.1	Output from creating a dummy variable	69
11.2	Output from a regression model with a dummy variable	70
11.3	Output from a regression model with an interaction	71
11.4	Output from a regression model and a “vif” command	72
12.1	Table of values for the variable “Bush”	77
12.2	Calculating and displaying the predicted values from the linear probability model	78
12.3	Summary statistics for predicted values from a binomial logit model and a binomial probit model	79
12.4	Raw output used to produce Table 12.3 of <i>FPSR</i>	80
12.5	The data editor view of a time-series data set in Stata	81
12.6	The data editor view of the last rows of a time-series data set in Stata	82
12.7	The beginning of a time-series .do file in Stata	83
12.8	Output from executing “tsset” in Stata	84
12.9	Output from a Koyck model in Stata	86
