<i>Preface</i>	<i>page</i> ix
<i>Notation</i>	xi
1 Number Theory and Combinatorics	1
1.1 Bipartite, k -Colorable and k -Colored Graphs	1
1.2 Transitive Relations, Topologies and Partial Orders	7
1.3 Series-Parallel Networks	12
1.4 Two Asymptotic Series	21
1.5 Multiples and Divisors	32
1.6 Discrepancy and Uniformity	40
1.7 Unitarism and Infinitarism	49
1.8 Erdős' Minimum Overlap Problem	56
1.9 Planar Graph Growth Constants	58
1.10 Tauberian Constants	67
1.11 Integer Partitions	72
1.12 Class Number Theory	78
1.13 Quadratic Dirichlet L-Series	97
1.14 Elliptic Curves over \mathbb{Q}	112
1.15 Modular Forms on $SL_2(\mathbb{Z})$	132
1.16 Chebyshev's Bias	147
1.17 Pattern-Avoiding Permutations	149
1.18 Cyclic Group Orders	154
1.19 Dedekind Eta Products	157
1.20 Series involving Arithmetic Functions	160
1.21 Riemann Zeta Moments	176
1.22 Central Binomial Coefficients	182
1.23 Fractional Parts of Bernoulli Numbers	189
1.24 Products of Consecutive-Integer Ratios	192
1.25 Prime Number Theorem	195
1.26 Mertens' Formula	202
1.27 Cyclotomic Polynomials	206

1.28	Minkowski–Alkauskas Constant	207
1.29	Two-Colorings of Positive Integers	209
1.30	Signum Equations and Extremal Coefficients	213
1.31	Monoids of Natural Numbers	217
1.32	Primitive Cusp Form	223
1.33	Cubic and Quartic Characters	232
1.34	Distribution of Error Terms	240
1.35	Cilleruelo’s LCM Constants	242
1.36	Amicable Pairs and Aliquot Sequences	244
1.37	Fermat Numbers and Elite Primes	247
1.38	Average Least Nonresidues	249
1.39	Apollonian Circles with Integer Curvatures	253
1.40	Molteni’s Composition Constant	258
1.41	Boolean Decision Functions	260
1.42	Map Asymptotics Constant	263
1.43	Injections, Surjections and More	266
2	Inequalities and Approximation	272
2.1	Hardy–Littlewood Maximal Inequalities	272
2.2	Bessel Function Zeroes	275
2.3	Nash’s Inequality	284
2.4	Uncertainty Inequalities	291
2.5	Airy Function Zeroes	295
2.6	Projections of Minimal Norm	299
2.7	Bohr’s Inequality	303
2.8	Moduli of Continuity	306
2.9	Quinn–Rand–Strogatz Constant	311
2.10	Tsirelson’s Constant	314
2.11	Mathieu Eigenvalues	321
2.12	Thomas–Fermi Model	324
2.13	Prandtl–Blasius Flow	329
2.14	Lane–Ritter–Emden Constants	338
2.15	Radiative Transfer Equations	344
2.16	Carleman’s Inequality	352
2.17	Golay–Littlewood Problem	354
2.18	Online Matching Coins	358
2.19	Toothpicks and Live Cells	363
2.20	Virial Coefficients	365
2.21	Strong Triangle Inequality	373
3	Real and Complex Analysis	377
3.1	Radii in Geometric Function Theory	377
3.2	Numerical Radii of Linear Operators	387
3.3	Coefficient Estimates for Univalent Functions	390

	<i>Contents</i>	vii
3.4	Planar Harmonic Mappings	399
3.5	Constant of Interpolation	403
3.6	Dirichlet Integral	406
3.7	Brachistochrone Problem	407
3.8	Unconditional Basis Constants	410
3.9	Power Series with Restricted Coefficients	414
3.10	Hankel and Toeplitz Determinants	415
3.11	Goldberg's Zero-One Constants	419
3.12	Electrical Capacitance	423
3.13	Aissen's Convex Set Function	428
3.14	Condition Numbers of Matrices	430
3.15	Goddard's Rocket Problem	432
3.16	Swing-Up Control of a Pendulum	437
3.17	Zermelo's Navigation Problem	444
4	Probability and Stochastic Processes	455
4.1	Hammersley's Path Process	455
4.2	Moments of Sums	462
4.3	Ornstein–Uhlenbeck Process	468
4.4	Zero Crossings	479
4.5	Variants of Brownian Motion	485
4.6	Shapes of Binary Trees	494
4.7	Expected Lifetimes and Inradii	504
4.8	Subcritical Galton–Watson Trees	511
4.9	Continued Fraction Transformation	519
4.10	Continued Fraction Transformation. II	527
4.11	Continued Fraction Transformation. III	533
4.12	Continued Fraction Transformation. IV	541
4.13	Lyapunov Exponents	552
4.14	Lyapunov Exponents. II	558
4.15	Lyapunov Exponents. III	564
4.16	Lyapunov Exponents. IV	568
4.17	Stars and Watermelons	577
4.18	Prophet Inequalities	580
4.19	Excursion Durations	582
4.20	Gambler's Ruin	584
4.21	Self-Convolutions	589
4.22	Newcomb–Benford Law	592
4.23	Electing a Leader	594
4.24	Substitution Dynamics	599
4.25	Biham–Middleton–Levine Traffic	604
4.26	Contact Processes	605
4.27	Interpolating between Max and Sum	612

viii	<i>Contents</i>	
4.28	Mixing Time of Markov Chains	616
4.29	Correlated Products	619
5	Geometry and Topology	623
5.1	Knots, Links and Tangles	623
5.2	Convex Lattice Polygons	632
5.3	Volumes of Hyperbolic 3-Manifolds	636
5.4	Poisson–Voronoi Tessellations	643
5.5	Optimal Escape Paths	652
5.6	Minkowski–Siegel Mass Constants	654
5.7	Slicing Problem	660
5.8	Constant of Theodorus	662
5.9	Nearest-Neighbor Graphs	664
5.10	Random Triangles	668
5.11	Random Triangles. II	682
5.12	Random Triangles. III	689
5.13	Random Triangles. IV	695
5.14	Random Triangles. V	700
5.15	Random Triangles. VI	713
5.16	Colliding Dice Probabilities	718
5.17	Gergonne–Schwarz Surface	721
5.18	Partitioning Problem	731
5.19	Soap Film Experiments	740
5.20	Inflating an Inelastic Membrane	747
5.21	Enumerative Geometry	750
5.22	Distance-Avoiding Sets in the Plane	754
5.23	Fraenkel Asymmetry	757
<i>Index</i>		765
