

## Index

- additive energy, 12  
     normalised, 12  
 additive quadruple, 11  
 approximate group, 2, 22, 24, 26, 33,  
     131, 181  
     arbitrary, 130–132  
     central extension, 134, 145  
     complex linear, 170–177  
     infinite, 3  
     intersected with another approximate  
         group, *see* intersection of  
             approximate groups  
     nilpotent, 109–129, 134  
     residually nilpotent, 133–146  
     soluble, 148  
     soluble linear, 147–156, 168  
     under a Freiman homomorphism, 32,  
         34  
     under a homomorphism, 27  
 approximate subgroup, *see* approximate  
     group  
 arithmetic progression, 33  
 arithmetic–geometric mean inequality,  
     77  
 asymptotic bounds, 109–110, 148, 170  
 asymptotic notation, 6–7  
 Babai’s conjecture, 189, 194, 197  
 Balog–Szemerédi–Gowers theorem, 4, 14  
 basic commutators, 96, 98, 101, 103,  
     108, 180  
 Blichfeldt’s lemma, 44  
 Bohr set, 36, 37, 69–73  
     shifted, 37  
     under a Freiman homomorphism, 38  
 Bourgain–Gamburd argument for  
     proving expansion, 4, 195  
 Breuillard–Green–Tao theorem, 5,  
     130–132  
 Cauchy–Schwarz inequality, 10, 12, 174  
 Cayley graph, 195  
 central series, 85–88, 135  
     lower, *see* lower central series  
     upper, *see* upper central series  
 centraliser, 9  
 Chang’s covering lemma, 56, 73–74,  
     111, 125  
 character, 59, 160  
 Cheeger constant, 195  
 Clifford’s theorem, 160  
 collecting process, 92–98, 102, 103, 180  
 collecting transformation, 95, 103, 180  
 commutator, 9, 82, 89–92, 102  
     basic, *see* basic commutators  
     degree, 90  
     linear, *see* linear commutator  
     linearisation, 105  
     of subgroups, 85  
     simple, *see* simple commutator  
     total weight, 89, 90  
     trivial, *see* trivial commutator  
     weight vector, 90  
      $x_i$ -weight, 90  
 commutator form, 98–100  
     basic, 99  
     degree, 99  
     linear, 99  
     linearisation, 105  
     multilinearity of, 121  
     total weight, 99  
     trivial, 99  
     weight vector, 99  
 commutator map, 99

- complex upper-triangular group, 148
- convex body, 44
  - dilate, 44
  - symmetric, *see* symmetric convex body
  - under a homomorphism, 45
- convex set, 44
- convolution, 62, 63
