	<i>Preface</i>	<i>page</i> ix
1	Introduction	1
	1.1 Introduction	1
	1.2 Historical Discussion	3
	1.3 Bounds and Asymptotic Notation	6
	1.4 General Notation	7
	1.5 Miscellaneous Results	9
2	Basic Concepts	11
	2.1 Large Doubling of Random Sets of Integers	11
	2.2 Sets of Very Small Doubling	15
	2.3 Iterated Sum Sets and the Plünnecke–Ruzsa Inequalities	16
	2.4 Ruzsa’s Covering Argument	19
	2.5 Small Tripling and Approximate Groups	23
	2.6 Stability of Approximate Groups under Basic Operations	27
	2.7 Freiman Homomorphisms	30
	Exercises	32
3	Coset Progressions and Bohr Sets	35
	3.1 Introduction	35
	3.2 Small Sets and Freiman Images of Coset Progressions	39
	3.3 Lattices	41
	3.4 Convex Bodies	44
	3.5 Successive Minima and Minkowski’s Second Theorem	46
	3.6 Finding Dense Coset Progressions in Bohr Sets	49
	Exercises	53

4	Small Doubling in Abelian Groups	54
4.1	Introduction	54
4.2	Fourier Analysis	59
4.3	Convolutions and Fourier Analysis of Sets of Small Doubling	63
4.4	Dense Models for Abelian Sets of Small Doubling	66
4.5	Bohr Sets in Dense Subsets of Finite Abelian Groups	69
4.6	Reducing the Dimension of the Bohr Set	71
4.7	Chang's Covering Argument	73
4.A	Dissociated Subsets of \widehat{G}	74
	Exercises	78
5	Nilpotent Groups, Commutators and Nilprogressions	81
5.1	Progressions in the Heisenberg Group	81
5.2	Nilpotent Groups	85
5.3	Commutators	89
5.4	The Collecting Process and Basic Commutators	93
5.5	Commutator Forms	98
5.6	Nilprogressions	101
	Exercises	107
6	Nilpotent Approximate Groups	109
6.1	Introduction and Overview of the Torsion-Free Case	109
6.2	Details of the Torsion-Free Case	112
6.3	Abelian p -Groups	114
6.4	Multi-Variable Homomorphisms into Abelian Groups	118
6.5	Placing Arbitrary Subgroups inside Normal Subgroups	120
6.6	Conclusion of the General Case	124
	Exercises	128
7	Arbitrary Approximate Groups	130
7.1	The Breuillard–Green–Tao Theorem	130
8	Residually Nilpotent Approximate Groups	133
8.1	Introduction	133
8.2	Central Extensions of Nilpotent Approximate Groups	134
8.3	Bounded Normal Series for Nilpotent Approximate Groups	136
8.4	From Normal to Central Subgroups	141
8.5	Residually Nilpotent Groups	144
	Exercises	145

<i>Contents</i>		ix
9	Soluble Approximate Subgroups of $GL_n(\mathbb{C})$	147
	9.1 Introduction	147
	9.2 The Sum–Product Phenomenon over \mathbb{C}	149
	9.3 Complex Upper-Triangular Groups	153
	9.A Representation Theory	156
	9.B The Structure of Soluble Linear Groups	163
	Exercises	167
10	Arbitrary Approximate Subgroups of $GL_n(\mathbb{C})$	170
	10.1 Introduction	170
	10.2 Free Groups and the Uniform Tits Alternative	171
	10.3 Small Neighbourhoods of the Identity	172
	10.4 Approximate Subgroups of Complex Linear Groups	175
	Exercises	177
11	Applications to Growth in Groups	178
	11.1 Introduction	178
	11.2 Finite-Index Subgroups	182
	11.3 A Refinement of Gromov’s Theorem	183
	11.4 Persistence of Polynomial Growth	185
	11.5 Diameters of Finite Groups	188
	11.6 An Isoperimetric Inequality for Finite Groups	189
	11.A Expansion in Special Linear Groups	194
	Exercises	196
	<i>References</i>	198
	<i>Index</i>	202
