

## Index

- $\pi$ -irreducible, 17
- adaptive covariance estimation method, 41
- adaptive Metropolis, 23
- ambient space, 143
- aperiodic, 17
- Askey scheme, 61
- autocovariance function, 82, 134
- Bayes' theorem, 21, 42, 131
- Bayesian inference, 2, 21
- Belanger's method, 45
- Berry–Sauer method, 42
- beta distribution, 67
- Brownian motion, 135
- Cameron–Martin theorem, 61
- Cauchy–Schwarz inequality, 130
- centered stochastic process, 135
- central limit theorem, 132
- chart, 142
- chart-induced basis, 143
- Chebyshev's inequality, 132
- Clenshaw–Curtis quadrature rule, 71, 77
- conditional distribution, 131
- continuous parameter chain, 133
- convergence almost surely, 131
- convergence in distribution, 132
- convergence in probability, 132
- correlation coefficient, 130
- correlation function, 138
- Courant–Rayleigh minimax principle, 92, 116
- Crank–Nicolson, 70
- cumulative distribution function, 128
- decorrelation time/decaying time scale, 138
- delayed rejection adaptive Metropolis (DRAM), 26
- density function, 128
- detail balanced condition, 17
- diffusion distance, 105
- diffusion forecast, 12, 97
- diffusion maps, 7, 106
- directional derivative, 142
- discrete parameter chain, 133
- discrete projection, 76
- distribution, 128
- divergence, 145
- Dynkin's formula, 114
- Dyson's formula, 55
- Einstein summation, 142
- empirical orthogonal function (EOF), 94
- ensemble Kalman filter, 3, 31
- ensemble square-root filter, 36
- ensemble transform Kalman filter (ETKF), 36
- equilibrium variance, 138
- ergodic Markov chain, 18
- Euler–Maruyama scheme, 38
- expectation, 129
- exponential map, 98
- Fokker–Planck equation, 138, 140
- forward Kolmogorov equation, 140
- Gauss distribution, 129
- Gaussian quadrature rule, 77
- generalized Langevin equation (GLE), 5, 55
- generalized polynomial chaos expansion, 61
- geodesic normal coordinates, 98
- geometrically ergodic, 37
- Gibbs sampling, 26
- gradient, 145
- Harris recurrent, 18
- heat equation, 69
- heat kernel, 105
- Hermite polynomials, 61
- higher moments, 130
- Hilbert–Schmidt integral operator, 81
- Hilbert–Schmidt kernel, 81
- Hölder inequality, 130
- hotelling transform, 94
- independent, 130
- innovation vector, 42
- intrusive, 74
- inverse-gamma distribution, 22
- isometric embedding, 143
- Itô isometry, 137
- Itô lemma, 139
- Jeffrey's prior, 25
- joint distribution, 129

- Karhunen–Loève, 7, 9, 80  
 Koopman operator, 114  
 Kosambi–Karhunen–Loève transform (KLT), 94  
 Kronecker delta function, 60  
 Kronrod–Patterson quadrature rule, 77  
 Lagrangian, 92  
 Laplace–Beltrami operator, 145, 146  
 Legendre polynomials, 61  
 Levenberg–Marquardt, 24  
 lexicographic ordering, 75  
 limiting distribution, 17  
 linear correlation, 130  
 Liouville equation, 139  
 Lorenz-63 model, 12  
 Lorenz-96 model, 3, 71  
 Lyapunov function, 37  
 manifold, 142  
 marginal distribution, 129  
 Markov-chain Monte Carlo (MCMC), 2, 16  
 Markovian, 16  
 maximum a-posteriori (MAP) estimate, 21  
 maximum likelihood estimate (MLE), 21  
 mean-square (m.s.) continuous, 135  
 mean-square (m.s.) convergence, 132  
 Mercer’s theorem, 80  
 Metropolis, 20  
 Metropolis–Hastings, 19  
 Monte Carlo, 71  
 Mori–Zwanzig formalism, 5, 53  
 Navier–Stokes, 12  
 nested quadrature rule, 77  
 non-intrusive, 74  
 non-intrusive spectral projection (NISP), 76  
 nonlinear Schrödinger equation, 56  
 nonparametric modeling, 6  
 null recurrent, 18  
 Nyström extension, 121  
 ordinary least squares (OLS), 24  
 Ornstein–Uhlenbeck process, 85, 137  
 orthogonal polynomials, 60  
 parametric modeling, 2  
 particle filter, 33  
 POD mode, 93, 94  
 positive operator, 81  
 positive recurrent, 18  
 principal component analysis (PCA), 9, 91, 94  
 principal components, 94  
 probability law, 134  
 probability measure, 127  
 probability space, 127  
 proper orthogonal decomposition (POD), 91, 94  
 pseudo-observation model, 43  
 pseudo-spectral, 76  
 random sequence, 133  
 random variable, 128  
 random walk, 133  
 random-walk Metropolis proposal, 20  
 rational approximation, 57  
 recurrent, 18  
 reproducing kernel Hilbert space, 122  
 Riemannian manifold, 143  
 Riemannian metric, 143  
 root-mean-square error (RMSE), 38  
 running average, 50  
 sample, 127  
 sample space, 127  
 self-adjoint, 81  
 shift operator, 114  
 $\sigma$ -algebra, 127  
 singular value decomposition, 94  
 Smolyak, 77  
 smooth manifold, 142  
 sparse grid, 77  
 spread, 38  
 state-parameter augmentation, 41  
 stationary distribution, 17  
 stationary in wide sense (w.s.s.), 135  
 stochastic collocation method, 74  
 stochastic Galerkin method, 68  
 stochastic processes, 133  
 strictly stationary process, 135  
 surrogate model, 27  
 tangent vectors, 143  
 topological space, 142  
 total variation norm, 18  
 transition kernel, 16  
 two-layer Lorenz-96 model, 5  
 Vandermonde matrix, 75  
 weak polynomial chaos, 65  
 weakly stationary process, 135  
 white noise, 136  
 Wiener process, 136  
 Wiener–Hermite expansion, 61
