Contents

Preface

1 Basic Concepts
   1.1 Introduction
   1.2 Warm-up: Effective Theory for Scattering on the Potential Well
   1.3 Integrating out a Heavy Scale: a Model at Tree Level
   1.4 The Model at Tree Level: Path-Integral Formalism
   1.5 Equations of Motion and Field Redefinitions
   1.6 Light Particle Mass at One Loop
   1.7 Matching of the Quartic Coupling at One Loop
   1.8 Dependence of the Effective Couplings on the Heavy Mass
   1.9 Decoupling in Different Renormalization Schemes
   1.10 Floating Cutoff
   1.11 Emergent Symmetries
   1.12 Triviality of the $\phi^4$-Theory
   1.13 Relevant Degrees of Freedom at Low Momenta
   1.14 Construction Principles of an EFT
   1.15 Literature Guide
   References

2 Nonrelativistic Effective Theories
   2.1 Introduction
   2.2 Foldy–Wouthuysen Transformation
   2.3 Construction of the Nonrelativistic Lagrangian for a Scalar Field
   2.4 Symmetries
   2.5 Perturbation Theory, Matching and the Effective Range Expansion
   2.6 Nucleon–Nucleon Scattering: the Case of a Large Scattering Length
   2.7 Relativistic Kinematics: Two-Particle Processes
   2.8 Cusps in Three-Particle Decays
   2.9 Dimers and the Faddeev Equation
   2.10 Efimov Effect
   2.11 Including Virtual Photons in Nonrelativistic Theories
   2.12 Spectrum and Decays of Hadronic Atoms
   2.13 Literature Guide
   References

## 3 Symmetries

3.1 Introduction 161  
3.2 Euler–Heisenberg Lagrangian 162  
3.3 Interaction of Long-Wavelength Photons with Atoms 169  
3.4 QCD Factsheet 170  
3.5 Chiral Symmetry in QCD 174  
3.6 Ward Identities 176  
3.7 The Triangle Anomaly 180  
3.8 Anomalies: Point-Split Technique 188  
3.9 Fujikawa Determinant 192  
3.10 Non-Abelian Anomalies 197  
3.11 Atiyah–Singer Index Theorem 204  
3.12 Chiral Symmetry and Anomalies on the Lattice 205  
3.13 Trace Anomaly, Dimensional Transmutation and the Proton Mass 219  
3.14 Low-Energy Spectrum of QCD: Goldstone Theorem 224  
3.15 Vafa–Witten Theorem 236  
3.16 Quark Mass Dependence of Hadron Masses 238  
3.17 Soft-Pion Technique 242  
3.18 Witten–Veneziano Formula 245  
3.19 Anomaly Matching 247  
3.20 Symmetries and Spectrum of (Partially) Quenched QCD 252  
3.21 Literature Guide 256  
References 257

## 4 Low-Energy Effective Field Theory of QCD

4.1 Introduction 263  
4.2 The S-Matrix of Composite Particles 265  
4.3 Weinberg’s Theorem 275  
4.4 The σ-Model 277  
4.5 The σ-Model with Nucleons 291  
4.6 Nonlinear Realization of Chiral Symmetry 299  
4.7 Chiral Perturbation Theory in the Meson Sector: Lagrangian and Generating Functional 304  
4.8 Tree-Level Calculations 309  
4.9 Chiral Perturbation Theory at One Loop 316  
4.10 Chiral Lagrangian with Nucleons 337  
4.11 Consistent Formulations of Baryon Chiral Perturbation Theory 346  
4.12 Theoretical Uncertainties 370  
4.13 The Meaning of Low-Energy Theorems 373  
4.14 Including Electromagnetic and Weak Interactions 378  
4.15 Splitting of the Strong and the Electromagnetic Interactions 402  
4.16 Wess–Zumino–Witten Effective Action 408  
4.17 The η’-Meson and Large-N_c ChPT 413  
4.18 Invariance of the ChPT Lagrangian 421
# Table of Contents

## 4 Effective Field Theories

4.19 Partially Quenched ChPT 424
4.20 The $\theta$-Term, Strong CP Violation and Axions 431
4.21 Literature Guide 448
References 450

## 5 Effective Theories in a Finite Volume

5.1 Introduction 466
5.2 The Mass of a Stable Particle in a Finite Volume 467
5.3 Scattering States: the Lüscher Equation 476
5.4 Moving Frames, Angular Momentum and Spin 487
5.5 Twisted Boundary Conditions 499
5.6 Two-Particle Decays 506
5.7 Multiparticle Systems: Perturbative Expansion for the Energy Levels 513
5.8 Three-Particle Quantization Condition 522
5.9 Three-Particle Decays on the Lattice 528
5.10 Photons in a Finite Volume 533
5.11 The Chiral Limit in a Finite Volume 542
5.12 Literature Guide 556
References 558

## 6 Exercises

Appendix A Notations and Conventions 599
A.1 Units and Metric 599
A.2 Pauli Matrices 600
A.3 Gell–Mann Matrices 601
A.4 Dirac Matrices 602
A.5 Isospin and $SU(3)$ Flavor Symmetry 602
A.6 Spherical Harmonics 603
A.7 Clebsch–Gordan Coefficients 604
A.8 Bessel Functions 605

Index 606
