Adams, J. C., 217
Agarwal, G. S., 588
— and Wolf, E., 556
Aggarwal, R. R., 680, 691
Airy, G. B., 65, *Fig. 7.74*, 440, *Fig. 8.12*, *Fig. 8.46*, 821
Ambrosini, D.,
—, Schirripa Spagnolo, G., Paoletti, D. and Vicalvi, S., 580
Amici, G. B., 283
Anderson, J. A., 274, 306
Anderson, W. C., 12
Andrejewski, W.,
Meixner, J. and —, 634
Arago, D. F., **xxxv, xxxvi**, 289, 417
Arley, N., 117
Armstrong, J. T., Hutter, D. J., Johnson, K. and Mozurkewich, D., 308
Avery, D. G., 745
Avogadro, A., 93

Babcock, H. D., *Fig. 7.66*, 455
Babinet, A., 424, 821, *Fig. 15.18*
Bachynski, M. P. and Bekefi, G., 489, 517
Bacon, G. E., 705
Baker, B. B. and Copson, E. T., 116, 418, 420, 422, 424, 500, 634, 648, 656, 670, 698
Baker, J. G., *Fig. 6.23*
Banerji, S., 500
Barham, P. M.,
Hopkins, H. H. and —, *Fig. 10.16*
Barnes, M. D.,
—, Kenyon, A. S., Zaiser, E. M. and La Mer, V. K., 786, 788
— and La Mer, V. K., 786, 788
Barrell, H., 410
— and Sears, J. E., 409, 410
Sears, J. E. and —, 410
Barrett, H. H., 223
Bartholinus, E., **xxxiv**
Bartlet, H.,
Fercher, A. F., —, Becker, H. and Wiltschko, E., 715
Bateman, H., 903
Bates, W. J., *Fig. 7.52*, 351
Becker, H.,
Fercher, A. F., Bartlet, H. — and Wiltschko, E., 715
Bekefi, G.,
Bachynski, M. P. and —, 489, 517
Benedict, E.,
Senftleben, H. and —, 781
Bennett, A. H., Jupnik, H., Osterberg, H. and Richards, O. W., 472, *Fig. 8.34*, *Fig. 8.35*
Benoit, J. R., 325, 405
—, Fabry, C. and Perot, A., 405, 409
Michelson, A. A. and —, 336, 379, 409
Beran, M. J. and Parrent, G. B., 614
Berek, M., 489, 555, 823
Bergmann, L., 674
Bergstrand , E., 12
Bernal, J. D., 702
Berne, B. J.,
— and Pecora, R., 729
Berry, M., 127
Nye, J. F. and —, 496
Bershader, D.,
Ladenburg, R. and —, 351

Abbe invariant of lens, 255
  reflection, 171
  refraction, 169, 208
Abbe theory of image formation in microscope, 467–472
aberration
  balancing, 526–527
  chromatic, 186–189, 257–260
  diffraction theory of, 517 *et seq.*
  fifth-order, 233
  fixed stars, 12
  geometrical (wave and ray aberrations), 228 *et seq.*
  order of, 232
  primary, 232, 236 *et seq*., 527 *et seq*.
    chromatic, 257–260
    coefficients of centred system, 236 *et seq*., 246 *et seq*., 529 *et seq.*
    diffraction focus, 520, 530–532
    diffraction patterns, 532–543
    frequency response curves, 549 *et seq.*
    frequency response function, 546
    of thin lens, 254–257
    tolerances, 527–532
aberration curves, 238
aberration function, 231–233, 235 *et seq*., 518 *et seq*.
absolute instrument, 153 *et seq.*
absorbing crystal, 840–852
  Fresnel equation, 841 *et seq.*
  interference figures, 846–849
  light propagation in, 840–846
absorbing films, *see* metallic films
absorbing medium, 218–219
absorption coefficient, 219, 221, 738
absorption cross-section, 720, 734, 788
absorption curves for weakly absorbing spheres, 788
absorption frequency, 96 *et seq.*
absorption index, 218–219
absorptive power, 747
achromat, 271
achromatic doublet, 188, 264
achromatic fringe, 302
achromatic microscope objective, 284
achromatic system, 188–189
achromatization, 188–189, 260
acuity, visual, 263
advanced potential, 79
aether, xxxii, xxxiii, xxxv, xxxvi
affine collineation (transformation), 161, 164
Airy formula
  for diffraction at circular aperture, 440
  for multiple-beam interference with plane-parallel plate, 65, 361–362
Airy pattern, 442
alkali metals, 751–752
allied Fourier integral, 558
Amici ('roof–type') prism, 272
amplitude, 17
  complex, 18
  scattering, 699, 713, 720
    forward, 720
amplitude division, 286, 313–359
amplitude object, 447
amplitude vectors, 125 *et seq.*
analytic signal, 558 *et seq.*
analyzer, 49, 819
anastigmatic lens (anastigmat), 265
angle
  of collection, 280
  of deviation, 190
  of diffraction, 414
  polarizing, 45, 48
  quasi-polarizing, 743
  of restored polarization, 742
angle characteristic, 146–152
ångström, 378, 410–411
angular aperture, 199
angular dimensions of sources (astronomical objects), determination of, 302–308, 576
angular dispersion, 192, 454
  of grating, 454
  of prism, 192
angular field of view, 201
angular frequency, 17
angular magnification, 164
angular spectrum of plane waves, 639–642, 711–713
anisotropic medium, *see* crystals
anisotropy, electrical, 790
annular aperture, 462 *et seq*., 490
anomalous dispersion, 19, 98
anomaly, phase, 498–499
antinode, 311
antireflection film, 54, 67
aperture
  angular, 199

aperture (contd)
numerical (NA), 200, 282, 466
relative, 200
see also diffraction
aperture stop, 199–201
aplanat, 264
aplanatic pair of points, 180
of lens, 256
of spherical surface, 160
aplanatic telescope objective, 211, 275
aplanatism, attainment with aspheric surfaces, 214–217
apodization, 464
area (region of) coherence, 554, 555, 576
aspheric surfaces, design of, 211–217
associated function, 558
associated Legendre polynomials, 766, 772, 785
associated monochromatic source in coherence theory, 578
astigmatic focal distance, 182
astigmatic focal line, photograph of, *Fig. 9.11*
astigmatic pencils, 181–186
astigmatism, 239, 240 *et seq.*, 262, 531–532, 552
astronomical telescope
reflecting, 274–279
refracting, 267–274
asymptotic approximation to integrals, 883–891
asymptotic behaviour of diffraction integrals, 429
asymptotic expansion, definition and properties of, 883 *et seq.*
asymptotic series for field vectors, 120
atomic refractivity, 93, 95
attenuation index, 218–219, 737
autocorrelation function, 548, 564
Aviar lens, 265
Avogadro number, 93
axes
dielectric, 792, 806
dispersion of, 792
optic, of crystal, 801, 805 *et seq.*
determination of location, 833
axial stigmatism, attainment with aspheric surfaces, 211–214
azimuth of vibration, 47–48

Babinet's compensator, 821–823
Babinet's principle,
electromagnetic form, 636–637
for scalar wave, 424
back-projection algorithm, 226, 715
Baker Super-Schmidt camera, 279
balancing of aberrations, 526–527
barrel distortion, 243–244
Bates wave-front shearing interferometer, *Fig. 7.52*, 351–352
Bauer's formula, 534,768
beam propagation in absorbing medium, 218
beam-splitter, 54
Beer's law, 219
Berek's compensator, 823
Berry phase, 127
Bessel equation, 766–767
Bessel functions, 767
beta function, 910
biaxial crystal, 805, 806
absorbing, 844, 848–849
interference figures from biaxial crystal plates, 831–833, 848–849
normal surface, 808–809
ray surface, 811
surface of constant phase difference, 832
Billet's split lens, 293–294, 296, 299
binocular, 269
biprism, Fresnel's, 293–294, 296, 299
birefringence, 812
form, 837–840
stress, 834–837
black body, 748
black obstacle, 633
black screen, 424
blazed grating, 455
bloomed surfaces, 68
blue sun, 785
Born's approximation
first-order, 504, 699–703, 707, 708
relation to Rytov approximation, 729
second-order, 708, 710, 711
Bouger's formula, 130, 131
boundary conditions
at discontinuity surface, 4–7
Kirchhoff's, 422, 424–425
at perfect conductor, 635–636
boundary diffraction wave, 499–503
Bragg's law, 706, 707
Brewster angle, 45, 68
Brewster fringes, 344
Brewster law, 45
brightness, 194, 195, 201–202, 227
de Broglie wavelength of a particle, 879–880
Brown–Twiss intensity interferometer, 308, 576–577
Burch reflecting microscope, 284

calculus of variations, 853–872
camera, photographic, 263 *et seq.*
see also Schmidt camera, Schmidt–Cassegrain camera, Baker Super-Schmidt camera
Campbell's theorem, 354
candela, 199
candle, international, 198
candle power, 198
canonical equations (Hamilton's), 860–861
Carathéodory's theorem for absolute instrument, 157
cardinal planes, 162
cardinal points, 162
Cassegrain telescope, 274–275
Cauchy's dispersion formula, 100–101
CAT scan, 218

CAMBRIDGE

Cambridge University Press
978-1-108-47743-7 — Principles of Optics
7th Edition
Index
More Information

vignetting, 201
virtual portion of object (image) space, 175
visibility
  curve of eye, 197
  curves from sources of different
    geometry, 298, *Fig. 7.11*, *Fig. 7.15*
    spectral distributions, 356 *et seq*.
  factor of eye, relative, 197 *et seq*.
  of fringes (Michelson's), 298
    relation to
      coherence time, 617
      degree of coherence, 570
      mutual coherence time, 618–619
visual acuity, 263
vitreous humour, 262
volume hologram, 708
von Laue equations, 706

Watson's lemma, 884
Wave
  boundary diffraction, 499–503
  conjugate, 507
  damped, 735
  diffracted, 427, 504
  electric, 763
  electromagnetic, xxxvii, 24 *et seq*.
  E-polarized, 55, 638, 678
  evanescent, 641, 712, 713, 714
  extraordinary, 807
  H-polarized, 55, 638
  harmonic, *see* harmonic wave
  homogeneous, 639, 712, 713, 714; *see also* plane wave
  inhomogeneous, 18, 639
  magnetic, 763; *see also* tranverse magnetic wave
  monochromatic (light), 20, 25 *et seq.*, 287, 354, 573, 577, 578, 624–625
  ordinary, 807
  partial, in Mie's theory, 774–775, *Fig. 14.9*
  plane, 15–16, 17 *et seq.*, 24 *et seq*., 639 *et seq*.
  plane-polarized, 30
  polarized, 25 *et seq*., 628
    elliptically, circularly, linearly, 25 *et seq*., 35–38
    partially, 557, 619, 628
  reconstructed, 504–512
  scalar, 14 *et seq*.
  secondary, (disturbance), 413, 416, 504
  spherical, 16
    Weyl representation, 711
  standing, 308–313
  transverse electric (TE wave), 55 *et seq.,* 763
  transverse magnetic (TM wave), 55 *et seq*., 763
  ultrasonic, 453, 674 *et seq*.
  unpolarized, 619, 624
  vector wave, 24–28
wave aberration, 229 *et seq., Fig. 5.3*
wave equation, 11, 610–615
wave-front
  deformation, influence on intensity at focus, 526
  division, 286, 290–308
  generalization in calculus of variations, 857
  geometrical, 119
  reconstructed, 504–512
  shearing interferometer, 351–352
wave group, 20 *et seq*.
wave mechanics of free electrons, 879–881
wave normal velocity, 793
wave normals,
  ellipsoid of, 799 *et seq*.
  Fresnel's equation of, 796, 841 *et seq*.
  inverse surface of, 812
  optic axes of, 801, 806 *et seq*., 811
  surface of, *see* normal surface
wave number, 17, 737
  complex, 737
  spectroscopic, 17
wave packet, 19–24
wave surface, 18
  geometrical, 119
wave theory, xxxiii, xxxiv, xxxv, 141
wave train, 353 *et seq*., 618
wave vector, 17
wave zone, 87, 774
wavelength, 17
  comparison, with
    Fabry–Perot interferometer, 377–380
    standard metre, 409–411
  of particle, de Broglie, 879–880
  reduced, 17
Weierstrass condition for a strong minimum, 865
Weierstrass $\mathcal{E}$ function, 864–865
Weyl representation of spherical wave, 711
wide-angle pencils, imaging with, 178–182
Wiener–Hopf method, 634
Wiener–Khintchine theorem, 567
Wiener's experiment on standing waves, 311–313
window, entrance, exit, 201

X-ray diffraction (scattering), 453, 511, 702, 705, 706, 708, 880–881
  Bragg's law, 706
  von Laue equations, 706
X-ray microscope, 511

Young's diffraction theory, 499
Young's interference experiment, 290–292, 296, 297, 299

Zeiss Biotar lens, 266
Zernike's circle polynomials, 523–525, 905–910
Zernike's phase contrast method, 472–475
zone construction, 413 *et seq.*
