<i>Preface to the third edition</i>	<i>page xix</i>
1 Introduction to life and long-term health insurance	1
1.1 Summary	1
1.2 Background	1
1.3 Traditional life insurance contracts	3
1.3.1 Introduction	3
1.3.2 Term insurance	4
1.3.3 Whole life insurance	5
1.3.4 Endowment insurance	9
1.3.5 Options and variations on traditional insurance	9
1.4 Modern insurance contracts	11
1.4.1 Why innovate?	11
1.4.2 Universal life insurance	12
1.4.3 Unitized with-profit	13
1.4.4 Equity-linked insurance	13
1.5 Marketing, pricing and issuing life insurance	14
1.5.1 Insurance distribution methods	14
1.5.2 Underwriting	15
1.5.3 Premiums	17
1.6 Life annuities	17
1.7 Long-term coverages in health insurance	19
1.7.1 Disability income insurance	19
1.7.2 Long-term care insurance	21
1.7.3 Critical illness insurance	23
1.7.4 Chronic illness insurance	24
1.8 Mutual and proprietary insurers	24
1.9 Other life contingent contracts	24

	1.9.1	Continuing care retirement communities	25
	1.9.2	Structured settlements	26
1.10		Pensions	28
	1.10.1	Defined Benefit pensions	28
	1.10.2	Defined Contribution	29
1.11		Typical problems	30
1.12		Notes and further reading	31
1.13		Exercises	31
2		Survival models	34
	2.1	Summary	34
	2.2	The future lifetime random variable	34
	2.3	The force of mortality	38
	2.3.1	Mortality laws	41
	2.4	Actuarial notation	44
	2.5	Mean and standard deviation of T_x	47
	2.6	Curtate future lifetime	51
	2.6.1	K_x and e_x	51
	2.6.2	Comparing ${}^{\circ}e_x$ and e_x	52
	2.7	Notes and further reading	53
	2.8	Exercises	54
3		Life tables and selection	58
	3.1	Summary	58
	3.2	Life tables	58
	3.3	Fractional age assumptions	60
	3.3.1	Uniform distribution of deaths	61
	3.3.2	Constant force of mortality	65
	3.4	National life tables	67
	3.5	Survival models for life insurance policyholders	70
	3.6	Life insurance underwriting	71
	3.7	Select and ultimate survival models	73
	3.8	Notation and formulae for select survival models	75
	3.9	Select life tables	76
	3.10	Some comments on heterogeneity in mortality	83
	3.11	Mortality improvement modelling	85
	3.12	Mortality improvement scales	89
	3.12.1	Single-factor mortality improvement scales	90
	3.12.2	Two-factor mortality improvement scales	92
	3.12.3	Cubic spline mortality improvement scales	94
	3.13	Notes and further reading	98
	3.14	Exercises	98

<i>Contents</i>		ix
4	Insurance benefits	104
4.1	Summary	104
4.2	Introduction	104
4.3	Assumptions	105
4.4	Valuation of insurance benefits	106
4.4.1	Whole life insurance: the continuous case, \bar{A}_x	106
4.4.2	Whole life insurance: the annual case, A_x	109
4.4.3	Whole life insurance: the 1/ <i>m</i> thly case, $A_x^{(m)}$	110
4.4.4	Recursions	111
4.4.5	Term insurance	115
4.4.6	Pure endowment	117
4.4.7	Endowment insurance	118
4.4.8	Deferred insurance	121
4.5	Relating \bar{A}_x , A_x and $A_x^{(m)}$	123
4.5.1	Using the uniform distribution of deaths assumption	123
4.5.2	Using the claims acceleration approach	125
4.6	Variable insurance benefits	126
4.7	Functions for select lives	131
4.8	Notes and further reading	131
4.9	Exercises	132
5	Annuities	141
5.1	Summary	141
5.2	Introduction	141
5.3	Review of annuities-certain	142
5.4	Annual life annuities	142
5.4.1	Whole life annuity-due	143
5.4.2	Term annuity-due	146
5.4.3	Immediate life annuities	148
5.5	Annuities payable continuously	149
5.6	Annuities payable 1/ <i>m</i> thly	152
5.7	Comparison of annuities by payment frequency	155
5.8	Deferred annuities	157
5.9	Guaranteed annuities	159
5.10	Increasing annuities	161
5.10.1	Arithmetically increasing annuities	161
5.10.2	Geometrically increasing annuities	163
5.11	Evaluating annuity functions	164
5.11.1	Recursions	164
5.11.2	Applying the UDD assumption	165
5.11.3	Woolhouse's formula	166

x	<i>Contents</i>	
	5.12 Numerical illustrations	169
	5.13 Functions for select lives	171
	5.14 Notes and further reading	171
	5.15 Exercises	172
6	Premium calculation	179
	6.1 Summary	179
	6.2 Preliminaries	179
	6.2.1 Assumptions	181
	6.3 The loss at issue random variable	181
	6.4 The equivalence principle premium	182
	6.4.1 Net premiums	182
	6.4.2 Gross premiums	186
	6.5 Profit	192
	6.6 The portfolio percentile premium principle	199
	6.7 Extra risks	203
	6.7.1 Age rating	203
	6.7.2 Constant addition to μ_x	203
	6.7.3 Constant multiple of mortality rates	205
	6.8 Notes and further reading	207
	6.9 Exercises	207
7	Policy values	218
	7.1 Summary	218
	7.2 Policies with annual cash flows	219
	7.2.1 The future loss random variable	219
	7.2.2 Policy values for policies with annual cash flows	224
	7.2.3 Recursive formulae for policy values	232
	7.2.4 Analysis of surplus	238
	7.2.5 Asset shares	242
	7.3 Policy values for policies with cash flows at $1/m$ thly intervals	245
	7.3.1 Recursions with $1/m$ thly cash flows	246
	7.3.2 Valuation between premium dates	247
	7.4 Policy values with continuous cash flows	250
	7.4.1 Thiele's differential equation	250
	7.4.2 Numerical solution of Thiele's differential equation	254
	7.5 Policy alterations	256
	7.6 Retrospective policy values	262
	7.6.1 Prospective and retrospective valuation	262

<i>Contents</i>		xi
7.6.2	Defining the retrospective net premium policy value	264
7.7	Negative policy values	267
7.8	Deferred acquisition expenses and modified net premium reserves	267
7.8.1	Full Preliminary Term reserve	270
7.9	Other reserves	273
7.10	Notes and further reading	274
7.11	Exercises	274
8	Multiple state models	286
8.1	Summary	286
8.2	Examples of multiple state models	286
8.2.1	The alive–dead model	287
8.2.2	Term insurance with increased benefit on accidental death	288
8.2.3	The permanent disability model	289
8.2.4	The sickness–death model	289
8.3	Assumptions and notation	290
8.4	Formulae for probabilities	295
8.4.1	Kolmogorov’s forward equations	300
8.5	Numerical evaluation of probabilities	301
8.6	State-dependent insurance and annuity functions	305
8.6.1	State-dependent annuities	308
8.7	Premiums	314
8.8	Policy values	315
8.8.1	Recursions for state-dependent policy values	317
8.8.2	General recursion for h -yearly cash flows	320
8.8.3	Thiele’s differential equation	322
8.9	Applications of multiple state models in long-term health and disability insurance	326
8.9.1	Disability income insurance	326
8.9.2	Long-term care	330
8.9.3	Critical illness insurance	332
8.9.4	Continuing care retirement communities	335
8.9.5	Structured settlements	339
8.10	Markov multiple state models in discrete time	342
8.10.1	The Chapman–Kolmogorov equations	343
8.10.2	Transition matrices	344
8.11	Notes and further reading	346
8.12	Exercises	347

xii	<i>Contents</i>	
9	Multiple decrement models	359
9.1	Summary	359
9.2	Examples of multiple decrement models	359
9.3	Actuarial functions for multiple decrement models	360
9.4	Multiple decrement tables	364
9.4.1	Fractional age assumptions for decrements	366
9.5	Constructing a multiple decrement table	368
9.5.1	Deriving independent rates from dependent rates	368
9.5.2	Deriving dependent rates from independent rates	371
9.6	Comments on multiple decrement notation	373
9.7	Transitions at exact ages	374
9.8	Exercises	381
10	Joint life and last survivor benefits	388
10.1	Summary	388
10.2	Joint life and last survivor benefits	388
10.3	Joint life notation	389
10.4	Independent future lifetimes	393
10.5	A multiple state model for independent future lifetimes	400
10.6	A model with dependent future lifetimes	404
10.7	The common shock model	411
10.8	Notes and further reading	414
10.9	Exercises	414
11	Pension mathematics	423
11.1	Summary	423
11.2	Introduction	423
11.3	The salary scale function	424
11.4	Setting the contribution for a DC plan	428
11.5	The service table	432
11.6	Valuation of final salary plans	440
11.6.1	Accrued benefits	440
11.6.2	A general formula for the EPV of the projected accrued age retirement pension	444
11.6.3	Withdrawal benefits	445
11.6.4	Valuing the current accrued benefit	448
11.7	Valuing career average earnings plans	449
11.8	Funding the benefits	451
11.9	Projected Unit Credit funding	453
11.9.1	The normal contribution formula using PUC funding	457
11.10	Traditional Unit Credit funding	458

<i>Contents</i>		xiii
11.10.1	The normal contribution formula using TUC funding	460
11.11	Comparing PUC and TUC funding methods	461
11.12	Retiree health benefits	462
11.12.1	Introduction	462
11.12.2	Valuing retiree health benefits	464
11.12.3	Funding retiree health benefits	467
11.13	Notes and further reading	471
11.14	Exercises	472
12	Yield curves and non-diversifiable risk	481
12.1	Summary	481
12.2	The yield curve	481
12.3	Valuation of insurances and life annuities	485
12.3.1	Replicating the cash flows of a traditional non-participating product	487
12.4	Diversifiable and non-diversifiable risk	488
12.4.1	Diversifiable mortality risk	489
12.4.2	Non-diversifiable risk	491
12.5	Monte Carlo simulation	496
12.6	Notes and further reading	501
12.7	Exercises	502
13	Emerging costs for traditional life insurance	506
13.1	Summary	506
13.2	Introduction	506
13.3	Profit testing a term insurance policy	508
13.3.1	Time step	508
13.3.2	Profit test basis	508
13.3.3	Incorporating reserves	511
13.3.4	Profit signature	515
13.4	Profit testing principles	516
13.4.1	Assumptions	516
13.4.2	The profit vector	516
13.4.3	The profit signature	517
13.4.4	The net present value	517
13.4.5	Notes on the profit testing method	518
13.5	Profit measures	519
13.6	Using the profit test to calculate the premium	521
13.7	Using the profit test to calculate reserves	521
13.8	Profit testing for participating insurance	524
13.9	Profit testing for multiple state-dependent insurance	528

xiv	<i>Contents</i>	
	13.10 Notes	534
	13.11 Exercises	535
14	Universal life insurance	545
	14.1 Summary	545
	14.2 Introduction	545
	14.3 Universal life insurance	546
	14.3.1 Introduction	546
	14.3.2 Key design features	546
	14.3.3 Projecting account values	548
	14.3.4 Profit testing Universal life policies	549
	14.3.5 Universal life Type B profit test	550
	14.3.6 Universal life Type A profit test	556
	14.3.7 No lapse guarantees	562
	14.3.8 Comments on UL profit testing	563
	14.4 Notes and further reading	564
	14.5 Exercises	564
15	Emerging costs for equity-linked insurance	571
	15.1 Summary	571
	15.2 Equity-linked insurance	571
	15.3 Deterministic profit testing for equity-linked insurance	573
	15.4 Stochastic profit testing	584
	15.5 Stochastic pricing	588
	15.6 Stochastic reserving	590
	15.6.1 Reserving for policies with non-diversifiable risk	590
	15.6.2 Quantile reserving	591
	15.6.3 CTE reserving	593
	15.6.4 Comments on reserving	594
	15.7 Notes and further reading	595
	15.8 Exercises	595
16	Option pricing	600
	16.1 Summary	600
	16.2 Introduction	600
	16.3 The ‘no arbitrage’ assumption	601
	16.4 Options	602
	16.5 The binomial option pricing model	603
	16.5.1 Assumptions	603
	16.5.2 Pricing over a single time period	604
	16.5.3 Pricing over two time periods	609
	16.5.4 Summary of the binomial model option pricing technique	612

<i>Contents</i>		xv
16.6	The Black–Scholes–Merton model	612
16.6.1	The model	612
16.6.2	The Black–Scholes–Merton option pricing formula	614
16.7	Notes and further reading	624
16.8	Exercises	625
17	Embedded options	629
17.1	Summary	629
17.2	Introduction	629
17.3	Guaranteed minimum maturity benefit	631
17.3.1	Pricing	631
17.3.2	Reserving	634
17.4	Guaranteed minimum death benefit	636
17.4.1	Pricing	636
17.4.2	Reserving	638
17.5	Funding methods for embedded options	642
17.6	Risk management	644
17.7	Profit testing	646
17.8	Notes and further reading	654
17.9	Exercises	655
18	Estimating survival models	660
18.1	Summary	660
18.2	Introduction	660
18.3	Actuarial lifetime data	661
18.3.1	Left truncation	662
18.3.2	Right censoring	662
18.4	Non-parametric survival function estimation	666
18.4.1	The empirical distribution for seriatim data	666
18.4.2	The empirical distribution for grouped data	667
18.4.3	The Kaplan–Meier estimate	669
18.4.4	The Nelson–Aalen estimator	678
18.5	The alive–dead model	679
18.5.1	Notes on the alive–dead model	682
18.6	Estimation of transition intensities in multiple state models	683
18.7	Comments	689
18.8	Notes and further reading	690
18.9	Exercises	690
19	Stochastic longevity models	696
19.1	Summary	696

xvi	<i>Contents</i>	
	19.2 Introduction	696
	19.3 The Lee–Carter model	697
	19.4 The Cairns–Blake–Dowd models	705
	19.4.1 The original CBD model	705
	19.4.2 Actuarial applications of stochastic longevity models	708
	19.4.3 Notes on stochastic longevity models	711
	19.5 Notes and further reading	713
	19.6 Exercises	713
A	Probability and statistics	716
	A.1 Probability distributions	716
	A.1.1 Binomial distribution	716
	A.1.2 Uniform distribution	716
	A.1.3 Normal distribution	717
	A.1.4 Lognormal distribution	717
	A.2 The central limit theorem	719
	A.3 Functions of a random variable	720
	A.3.1 Discrete random variables	720
	A.3.2 Continuous random variables	720
	A.3.3 Mixed random variables	722
	A.4 Conditional expectation and conditional variance	722
	A.5 Maximum likelihood estimation	723
	A.5.1 The likelihood function	723
	A.5.2 Finding the maximum likelihood estimates	724
	A.5.3 Properties of maximum likelihood estimates	725
	A.6 Notes and further reading	726
B	Numerical techniques	727
	B.1 Numerical integration	727
	B.1.1 The trapezium rule	727
	B.1.2 Repeated Simpson’s rule	728
	B.1.3 Integrals over an infinite interval	729
	B.2 Woolhouse’s formula	730
	B.3 Notes and further reading	731
C	Monte Carlo simulation	732
	C.1 The inverse transform method	732
	C.2 Simulation from a normal distribution	733
	C.2.1 The Box–Muller method	733
	C.2.2 The polar method	734
	C.3 Notes and further reading	734

		<i>Contents</i>	xvii
D	Tables		735
	D.1	The Standard Select and Ultimate Life Tables	735
	D.2	Joint life functions	742
	D.3	Standard Sickness–Death tables	744
	D.4	Pension plan service table	747
	<i>References</i>		748
