

Index

- L^p improving, 233
- L^p -space, 234
- L^q -spectrum, 103
- ϕ -Assouad dimension, 36
- p -Hardy inequality, 231
- r -separated set, 8

- absolute continuity, 234
- affine map (affinity), 110
- affinity dimension, 112
- Ahlfors regularity, 88
- Aikawa dimension, 231
- almost bi-Lipschitz embedding, 213
- Apollonian circle packing, 4, 148
- approximate square, 119
- arithmetic progression, 215
- Assouad dimension, 10
 - of a measure, 56
 - of a metric space, 200
- Assouad spectrum, 25
 - of a measure, 60
- Assouad's embedding theorem, 203

- badly approximable numbers, 219
- Bedford–McMullen carpet, 114
- Besicovitch set, 187
- bi-Lipschitz function, 18
- bi-Lipschitz stability, 18
- Bowen's formula, 139
- box dimension, 6
 - of a measure, 61
- Brownian motion, 226

- conformal dimension, 191
- conformal map, 138
- continued fraction, 143
 - backwards continued fraction, 143
- contraction, 81
 - contraction ratio, 81
- contractive map, 140
- coordinate uniform measure, 132
- countable stability, 18
- cover, 5

- definability, 224
- difference set, 212
- dimension drop, 94
- dimension profile, 167, 172
 - capacity approach, 172
- Diophantine approximation, 219
- Dirichlet's theorem, 95, 185, 219
- distance set, 181
 - conjecture, 181
- doubling measure, 57
- doubling metric space, 200
- doubling near the origin, 214
- Dynkin's conjecture, 200

- entropy, 107
- Erdős conjecture, 215
- extremality, 224

- Falconer's formula, 112
- finite stability, 18
- fractional Brownian motion, 227
- Fuchsian group, 147
- fully supported measure, 9

- gallery, 16
- Galton–Watson process, 157
- Gauss map, 143
- global measure formula, 149
- Grassmannian manifold, 167
- Green–Tao theorem, 216
- Hölder function, 49

- Hölder mapping problem, 247
 Hölder's inequality, 235
 Hardy's inequality, 230
 Hausdorff dimension, 6
 of a measure, 9
 Hausdorff measure, 5
 Hausdorff metric, 64
 Heisenberg group, 203
 Hutchinson operator, 82
 Hutchinson–Moran formula, 93
 hyperbolic metric, 145
 hyperbolic space, 145
 hyperplane diffuse, 220
 implicit theorems, 89
 inhomogeneous self-similar set, 59, 238
 interval maps, 140
 iterated function system (IFS), 81
 attractor, 81
 invariant measure, 84
 Kakeya set, 187
 conjecture, 187
 discrete Kakeya set, 219
 extended Kakeya set, 188
 Kleinian group, 145
 limit set, 145, 221
 Poincaré exponent, 147
 Kolmogorov's 0-1 law, 242
 Laakso graphs, 203
 large deviations, 157
 Ledrappier–Young formula, 133
 Lipschitz function, 18
 Lipschitz stability, 18
 Littlewood polynomial, 249
 lituus, 204
 locally finite (measure), 56
 logarithmic spiral, 204
 lower dimension, 23
 of a measure, 57
 of a metric space, 201
 lower spectrum, 26
 of a measure, 61
 Lyapunov exponent, 107
 Möbius group, 145
 Mandelbrot percolation, 154
 Mandelbrot set, 4
 Manneville–Pomeau map, 142
 Marstrand's slicing theorem, 178
 Marstrand–Mattila projection theorem, 167
 mass distribution principle, 39
 McMullen measure, 123, 133
 measurability, 239
 microset, 16
 middle third Cantor set, 108
 modified Assouad dimension, 228
 modified lower dimension, 24
 monotonicity, 18
 Muckenhoupt weights, 231
 neighbourhood (of a set), 65
 o-minimality, 224
 open set condition, 83
 open set property, 18
 orthogonal projection, 166
 packing (centred), 8
 packing dimension, 7
 of a measure, 9
 parabolic Cantor set, 141
 parabolic point, 140, 149
 rank, 149
 Patterson–Sullivan measure, 148
 percolation, 154, 195
 pinned distance set, 247
 popcorn function, 45
 porosity, 71
 pressure, 139
 product, 160
 measures, 161
 quasi-Assouad dimension, 24
 quasi-Lipschitz function, 25
 quasi-lower dimension, 36
 quasi-self-similarity, 89
 quasi-symmetry, 190
 Rényi map, 142
 Radon–Nikodym derivative, 234
 regularity dimension, 56
 reverse Hölder inequality, 235
 Schmidt games, 221
 self-affine set, 110
 Barański carpet, 116
 Przytycki–Urbański carpet, 126
 self-affine carpet, 114, 193, 221
 self-affine measure, 129
 uniform fibres, 115
 self-conformal set, 137
 self-similar set, 93
 self-similar measure, 105
 semialgebraic set, 224
 Sierpiński carpet, 94, 194

- Sierpiński triangle, 4, 83, 194
- similarity, 65
 - similarity ratio, 65, 93
- similarity dimension, 93
- simultaneous realisation problem,
 - 86
 - for Kleinian groups, 153
 - for self-affine sets, 133
- singular value function, 112
- slice, 178
- snowflaking, 203
- Sobolev inequality, 231
- spherical maximal function, 233
- spiral winding problem, 204
- stability under closure, 18
- Stirling's approximation, 123
- strong separation condition, 83
- support (of a measure), 9
- symbolic coding map, 84
- symbolic space, 83
- Szemerédi's theorem, 215
- Takagi function, 249
- topological dimension, 192
- uniformly perfect, 201
- upper natural density, 215
- upper spectrum, 32
- very strong separation condition, 131
- weak separation property, 98
 - for self-conformal sets, 139
- weak tangent, 65
 - of a measure, 75
- Weierstrass function, 248
